Best Quality. Hand-made

Greenhouse Glass

Now is the time to buy.

Prices are extremely low.

—— WRITE US.——

Baur Window Glass Co.

EATON, INDIANA.

MASTICA is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass, as occurs with putty. LASTS LONGER THAN PUTTY. Easy to apply.

Mention the American Florist when writing

THE BEST WAY
to collect an account is to place it with the
National Florists' Board of Trade
56 Pine Street, NEW YORK,

Use **1** part to **75** or **100** parts of water.

B. G. PRATT CO., 50 Church St., New York, U. S. A.

French Mauve Lilac.

French mauve lilac, forced for shipment to the London markets during the week, according to The Times realized the remarkable prices of 48 and 60 shillings (a shilling is about 24 cents) a dozen bunches wholesale. Hitherto white forced French lilac has dominated the spring flower trade. The demand for mauve lilac so far exceeds the supply for, in London alone, florists are able to dispose of all the present shipments. For indoor table decoration mauve forced lilac will be particularly popular during the present season. Importers say that the high prices realized speak well for the future of the spring flower trade in London. Mauve violets from the south of France are also commanding similar prices to those quoted for mauve forced lilac. Sixty shillings a dozen bouquets for these violets can very seldom be depended upon in the markets. Never before have mauve-colored flowers met with such appreciation.—Horticultural Advertiser, February 3, 1909.

NORRISTOWN, PA.—The opening of Muller's new retail store, at 57 East Main street, was very satisfactory and well patronized.

ALBANY, N. Y.—Philip Bender, superintendent, intends carrying out considerable improvements in the parks, including a new greenhouse on New Scotland avenue.

BOOKS FOR FLORISTS.

The time is coming along when these are needed and opportunity at hand for reading them. Every one of the following should be in your library.

Send prices quoted and we send the books.

THE HORTICULTURISTS' RULE-BOOK (L. H. Bailey).—Contains information valuable to all those engaged in any branch of horticulture. Illustrated. 312 pages. 75 cents.

MANUAL OF THE TREES OF NORTH AMERICA (Sargent).—The most complete and authentic work on the subject. The pages number 826, with over 600 illustrations. $6.00.

THE ROSE.—Its cultivation, varieties, etc. (H. B. Ellwanger).—A complete guide of the cultivation of the rose, together with the classification of all the leading varieties. $1.25.

GREENHOUSE CONSTRUCTION (Taft).—It tells the whole story about how to build and heat a greenhouse, be it large or small, and that, too, in a plain, easily understood, practical way. It has 118 illustrations. $1.50.

YARD AND GARDEN (Baker). An excellent book treating on the method of making home gardens attractive. The author covers a wide range of subjects in quite an able manner and the book is full of interest for the amateur gardener; 140 illustrations, 420 pages, $2.

SUCCESS IN MARKET GARDENING (Rawson).—Written by one of the most prominent and successful market gardeners in the country, and who has the large t glasshouses for forcing vegetables for market in America. Outdoor and indoor crops are treated. Illustrated, $1.00.

LANDSCAPE GARDENING (Maynard).—The development of landscape art within the past few years compels the wide awake florist to keep posted on this branch of the business. The many suggestions of this book will be found helpful every business day. It contains 338 pages, 165 illustrations. $1.50.

LAWNS AND HOW TO MAKE THEM (Leonard Barron).—A very useful and practical work, thoroughly covering the subject of which it treats. Illustrated. $1.10.

THE GOLDFISH (Mulertt).—A number of florists find goldfish an attractive and paying addition to their business. The best advice is given in every department of the subject, including construction and care of the parlor aquarium, in this volume of 160 pages, handsomely illustrated. $2.00.

THE GARDEN MONTH BY MONTH (Sedgwick).—A well classified list of hardy herbaceous and other plants arranged for each month in the year. Water plants, vines, ferns, foliage plants and others all have separate chapters devoted to them and a color chart is an unusual and extremely useful addition to a most carefully compiled and excellent book. Finely illustrated. $4.30.

E. HIPPARD, Youngstown, Ohio.

Albany, N. Y.

At the last regular monthly meeting of the Florists' Club, an interesting discussion was held by some of the members on the lateness of the season. President Fred Goldring said that the spring flowers have not yet appeared in his garden at Slingerlands nor in the woods adjacent to his home. Others told of work done last year outdoors that could not be taken up at all at the time of the meeting. It was the general opinion that the season is two or three weeks late. President Goldring named three committees to report on sick members who might reside in the north, south, and west ends of the city. The committees named are: North, Fred Henkes, Wm. Hannell, Louis Menand; south, Edward F. Meaney, Frank Connelly, John J. Berberick; west, Frank M. Briare, Patrick Hyde and Thos. F. Tracey. The matter of the flower show to be held in November was left wholly to the special committee, of which Fred A. Danker is chairman, to report upon at the earlest convenient time. Two new members were admitted.

Superintendent Philip Bender of the bureau of parks is busily engaged with plans for the spring and summer. Among the improvements contemplated is a greenhouse 26x52 feet to replace one of old construction in use by the park bureau on New Scotland avenue. Along one side of the new building will be a propagating house 11x52 feet. The walls for the combined structure will be of concrete surmounted by iron frame work of modern design. The installation will include a new hot water boiler with 4,600 square feet of radiation surface. Besides the greenhouse the superintendent has plans for a new tool and coal house 30 feet square to be erected on the north side of the lake house in Washington park. Thirty-five new electric lamps have recently been installed in Washington park and are supplied with current from conduits laid underground.

John D. Oliver, member of the wealthy plow manufacturing family at South Bend, Ind., recently ordered through Eyres some very handsome funeral designs for the funeral of Mrs. D. A. Wells, an old resident of Johnstown who died recently. The designs included a mat for the coffin made of 5,000 violets, White Killarney and Bride roses, a gates ajar upon a 42-inch frame, made up of cœlogyne, lily of the valley and violets; a pillow of Bride and White Killarney roses and a wreath of White Killarney and cattleyas on a 24-inch frame. Three men were sent from this city to Johnstown with the designs.

Fred Goldring, president of the Florists' Club, is receiving congratulations for the honor recently conferred upon his daughter, Winifred, who at Wellesley college has been awarded by the faculty a Durant scholarship granted only to students of the highest rank in the institution.

R. D.

They Have No Gutter at Eaves

which greatly increases their attractiveness and decreases the shade. One means a constant satisfaction; the other, unequalled productiveness.

They are the lightest, simplest, strongest and most durable houses, and cost less to maintain.

Wait A Li'l' While.

Col' win' a-blowin'—
Sun takes back his smile;
Can't be always winter;
Wait a li'l' while!

Soon see Mister Bluebird—
Sunshine on his bres';
His song is mighty little,
But he always sings his bes'!

He'll be dar, on de wire,
Chirpin' bout de May;
"Thankful fer de sunshine,"
Is de very word he say!

Whar he stay, I wonder,
We'n snow is comin' down?
But soon we'll tell him "Howdy!
Glad you come ter town!"

—Atlanta Constitution.

The Easter Business.

NOTHING startling has been brought to light by the Easter trade reports we are enabled again to publish through the courtesy of our correspondents, and nothing in the way of phenomenal prices were obtained or probably looked for but there seems, in spite of the inclement weather in many localities, to have been a steady rise in sales and this is satisfactory. As is always the case, there are some retailers who report poor sales. Local conditions are usually the cause of these occasional failures and the overwhelming number of satisfactory reports show a healthy and stable condition in the trade generally that is encouraging. Each year brings out the fact more prominently that, with the largely increased production of cut flowers and the cheaper grades of plants and the increased clientele among persons of moderate means, the days of inflated prices are over. There has to be a rise in prices at such times as Easter and Christmas and as far as this is caused by the law of supply and demand it is perfectly legitimate. But those growers and retailers who are alive to the fact that artificial inflation of values is not to the best interests of their trade will be they that reap the benefit of the good times that are coming, judging by appearances in all other lines of trade.

DETROIT, MICH.—J. F. Sullivan reports trade and prices about the same as last year, with all stock equal to the demand, except violets. Lilies, azaleas and bulb stock were the most popular plants in the order named. Cut roses did not sell well, but violets were in great demand and not enough were at command. Low priced plants were popular, but high priced baskets did not sell as well as formerly. Other stores, such as butchers and grocers, handled plants in quantity.

POUGHKEEPSIE, N. Y.—"Business this year was the best ever in every respect," said W. A. Saltford of the Saltford Flower Shop. "We had three times our usual number of lilies, but were cleaned up by Wednesday night. Everything else in cut flowers and plants was in plentiful supply, with a very large demand. Quality of stock excellent."

GAINSVILLE, GA.—J. E. Jackson reports trade as about the same as last year at similar prices. Flowering plants were short and there were not sufficient plants to meet the demand. Cyclamens, hyacinths and primulas did not sell as well as other pot stock, but prices were better than last year on cut roses and carnations.

GRAND RAPIDS, MICH.—Sales greater than last year at prices about the same is the report of the Grand Rapids Floral Co. Plants and flowers were equal to the demand, lilies and azaleas selling well in plants. There was little demand for red roses.

PARKERSBURG, W. VA.—J. W. Dudley & Son report a 10 per cent increase in sales over last year at prices about the same and plenty of all classes of stock. Hydrangeas sold best in pot stock, bulbous stock least, while in cut flowers violets and roses had the call, with carnations following closely. The cold and disagreeable weather necessitated the wrapping of all plants for delivery.

MONTREAL, QUE.—Trade here showed an increase of about 15 per cent, with rather better prices, except in lilies, which never vary much. Pot lilies were in short supply, also cut flowers generally and sold well. Spireas dragged rather. Bulbous stock was doubtless helped owing to the high price of roses and carnations. Roses in pots were fine and in great variety.—L.

FORT WAYNE, IND.—W. J. & M. S. Vesey report trade and prices about the same as last season, with stock equal to the demand, except for violets and carnations. Plants in red and white sold best but there was little demand for yellow, while the sale of bulb stock was poor. Cheap plants sold better than those of a higher grade.

NASHVILLE, TENN.—Good prices ruled here and there was a great increase in business. There was a good supply of both cut flowers and plants. Rambler roses and lilies sold well, azaleas slow. Easter day was fine, which helped to dispose of the great quantity of fine stock brought in by the growers.—M. C. D.

DAVENPORT, IA.—The "prices of former years ruled" according to Theo. Ewoldt, who reports trade as about equal to that of 1908. Lilies sold higher than usual. There were plenty of pot plants and also cut flowers with the exception of violets. Lilies ruled in the pot plants and every one had them in fine order. Good tulips sold well out—other bulb stock was a drag. The very windy cold weather was against shopping, especially for ladies.

SAVANNAH, GA.—A. C. Oelschig & Sons report nearly double last year's sales at good prices. More plants could have been sold, but there was plenty of cut flowers. Lilies were short, but customers took spireas instead. Roses and carnations were in good demand, in fact, all cut flowers, the shorter grades moving well for cemetery decoration.

BRAMPTON, ONT.—The Dale Estate reports greater sales than at last Easter but at no better prices. Plants were wanted and some cut flowers were short. Roses and carnations sold unusually well but bulbous stock was not much wanted. Undue competition caused lilies to be offered lower than the cost of production.

KOKOMO, IND.—W. W. Coles reports sales as 20 per cent above those of last year at prices about the same. Plants were scarce and carnations were in short supply. Lilies, hyacinths and daffodils sold well in plants; roses and carnations in cut flowers. Rose stock was especially good.

CINCINNATI, O.—There was a considerable falling off on sales here, but prices were maintained. Lilies were short in supply, also cut flowers, or probably the sales would have been greater. Everything was received in good order with the exception of some soft carnations and roses.—S.

BINGHAMTON, N. Y.—A 35 per cent increase at prices 10 per cent higher is how Wm. Moore sizes up his Easter trade. More cut flowers and plants could have been sold. Geraniums and azaleas sold best in plants and violets were in great demand.

ATLANTA, GA.—The Easter sales were about equal to those of last year, but not to those of 1907, according to the Atlanta Floral Co. Cut flowers and plants were equal to the demand.

THE RETAIL TRADE

THE European journals are commenting favorably on our supplementary illustrations which are being received with such great favor at home by wholesalers and retailers alike. On many retailer's counters throughout the country they are being displayed and are good business getters, as customers can easily see at a glance what they may expect in various designs. Keep them clean in a folder or otherwise and always have them handy.

A Boxwood Wreath.

SEE SUPPLEMENT WITH THIS ISSUE.

It hardly needs a practiced or artistic eye to see where an artistic boxwood wreath excels the ordinary, close-tied wreath as seen in too many instances about retailers' windows and stores. In its way the boxwood is as beautiful as any other plant in outline, while for color there are few to beat it, but, when stuffed in tight as sometimes seen, there is no grace or beauty about it. So tightly do some people tie their wreaths that one almost expects to see them take the shears and finish the job of clipping them into shape. An escaping spray or a leaf or two "out of place" is an abomination to these lovers of the stiff and inartistic whose wreaths and other designs always look as though they were all cast in one mould.

There is not, of course, the scope for originality about a boxwood wreath that there is in wreaths of cut flowers but there are many ways of using box to good effect, especially in designs for funerals and cemetery work. White or yellow flowers, such as Paper White narcissus or yellow chrysanthemums have a rather dead appearance over the usual greens and ferns but the glossy green of the boxwood brightens them up and throws them into greater contrast. At Christmas boxwood balls with a few winter berries are popular at parties while at any time the sprays are charming used sparingly in bouquets or wreaths. But the boxwood wreath, pure and simple may be made very attractive. Nothing looks so rich as a bright, deep red ribbon, the contrast being so very strong between this and the foliage. But, whatever way it is used, get away from the hard circle, ball or cross, let a few sprays escape from bondage.

The Art Floral Co., San Francisco.

One of the finest retail stores in the west, a well arranged, artistic and handsome place is that of the Art Floral Co. at 239 Post street, San Francisco. This store is located in the center of what will be the most fashionable retail shopping district of the city, and within a few blocks of the finest hotels, such as the St. Francis, Fairmont, Union Square, and various other places of the kind. The size of the store is 18x60 feet with a fine mezzanine floor, above which the office and display room for baskets and other novelties are located. Below is a large basement in which all the shipping and other work of that nature is done.

The interior of the store is finished in white enamel, with mirrors that are nine feet high running from the front of the place back 40 feet on both sides. The store is equipped with the latest improved Tungsten electric lamps, which give the very best illuminating results. The firm has been exceptionally careful throughout in the designing of the store so that it would be convenient in every respect for the handling of its business promptly and properly. The Art Floral Co. is to be congratulated on having such a well equipped, beautiful store while a glance at the stock displayed shows that only flowers of a high order of merit are handled.

Fine Standing Anchor.

The standing anchor reproduced herewith was the work of Geo. E. Lindeman, designer for Mills the Florist, Jacksonville, Fla., at the establishment of the latter. Roses, carnations and lily of the valley were used for the anchor, the base being composed of Easter lilies and cycas leaves. It was made to the order of the pilots of Tampa bay at a cost of $100.

The Chicago Stores at Easter.

A BRILLIANT DISPLAY.

Seldom has there been a finer display in the Chicago stores than at the recent Easter, all of the principal retailers having evidently made up their minds that a good time was coming and pre-

INTERIOR OF THE NEW STORE OF THE ART FLORAL CO., SAN FRANCISCO.

pared for it. The cut flower situation was fairly satisfactory on the whole but the scarcity of good American Beauty roses was keenly felt. Had this occurred at Christmas, however, it would have been a worse disaster as there is not at that time such a good variety of other stock at command. Lilies about met the demand though probably more would have been disposed of in some cases had they been forthcoming. Bulb-out stock was excellent both pot grown and cut the yellow daffodils, Narcissus poeticus, N. Golden Spur and others being exquisite while hyacinths, tulips, lily of the valley and others were in prime order. Azaleas were very plentiful also rhododendrons and hydrangeas though the latter, in many cases, were hardly developed. Rambler roses were elegant stock and there was a finer display of hybrid perpetuals in variety than usual.

Easter baskets were not quite so plentiful as usual but several retailers had them in splendid order. Without making any invidious comparisons we must say that the elegant creations of Harry Rowe on Madison street were well above the average, even of this clever artist's work. There is always something new and striking in Mr. Rowe's conceptions and, without running to extremes in any single direction, he always manages to put up something different and never misses an artistic and satisfying whole. Every plant in season now was represented but what struck the writer as the finest of all was the standard plants of Crimson Rambler rose with the stems draped with asparagus, chiffon and in other ways and the pots with ornamental coverings. All very simple when described, but the way they were treated lifts them quite out of the commonplace. Others were baskets of roses and azaleas, little bark covered boxes with various bulb stock and fine specimen hydrangeas. In all his efforts Mr. Rowe excelled himself this Easter and no eulogy is too strong for this class of work.

Easter found O. J. Friedman fairly well established in his fine new store on Michigan avenue and he was showing magnificent stock in all lines. His store and workroom combined are about 125 feet deep and 27 feet wide. How he managed to get his fine plate glass window fixed in the face of the glazier's strike and with the big department stores and others waiting the pleasure of the knights of the diamond is a secret he keeps, but he did it and perhaps his is the only window of this dimensions fitted in Chicago in many weeks. O. J. can evidently be very persuasive at times. He has probably never shown finer plants of azaleas, rhododendrons, heather, small and large, and other seasonable stock but when we mentioned American Beauty roses a cloud came over his features. The noveau art baskets, filled with fine azaleas, hydrangeas and various other Easter plants were a telling feature in the display which was arranged on a long stand running almost the entire length of the store. With this first rate location and the excellent facilities in the spacious workrooms at his disposal, Mr. Friedman naturally looks for a largely increased business and we trust he will have all the success his spirited policy deserves.

The Fleischman Floral Co.'s stock was first class in every particular and here we noted some of the finest plants of rhododenrons we have seen anywhere this season. Many were large specimen plants four or five feet high and as far through simply covered with fine flower trusses. The varieties were exquisite in all cases the soft mauve and pinks being especially fine. All through the Easter the hats, filled with violets proved splendid sellers and were a great attraction to the store. A large stand running the full depth of the store was filled with the choicest of pot stock and this was kept good as the plants were sold by bringing in fresh stock from the greenhouses. The cut flowers here are always of the finest and at Easter were no exception to the rule. Local advertising in the best mediums and giving in all cases good value to its customers has greatly helped this firm. John Mangel, A. Lange and the Bohannon Floral Co. all had excellent stock in great variety the cut flowers and pot plants at Mangel's being of exceptional merit.

STANDING ANCHOR BY MILLS THE FLORIST, JACKSONVILLE, FLA.

Base, Lilacs and Cycas Leaves. Anchor, Carnations, Roses and Lily of the Valley.

Wm. J. Smythe seems unfortunate with his windows at Easter. Last year an automobile crashed through his Michigan avenue window while this year just before getting them in order for Easter the large plate glass window on Thirty-first street was blown clean out by the heavy gale. Glaziers on strike and a hole like this in the store looked like a case of boarding up one side but some temporary windows were rigged up and a very creditable showing made of various Easter plants. The Easter baskets here were of exceptional quality. Some of Mr. Smythe's all yellow arrangements of genistas, narcissi and yellow hyacinths tied with rich golden yellow ribbon were exquisite and a novel idea. The birds-nest ferns, foliage begonias and many of the most popular plants such as lilies, Primula obconica and others were used with fine effect and placing the little yellow Japanese ducklings among the foliage was quaint and good. All kinds of small devices in various kinds of metal and willow ware, china and birch bark gave variety to the stock and among the pot plants were some remarkably good roses including the hybrid perpetuals Ulrich Brunner, Magna Charta and others and all the more popular ramblers.

A. McAdams of Fifty-third street and Kimbark avenue returned from his Florida trip in time for his Easter trade. As usual, he had a fine lot of bulb stock as well as plants of all kinds in great variety and he was very busy all through the Easter. Small and medium sized baskets, birch bark boxes and small fern dishes are largely handled here and many of these were remarkably good. Mr. McAdams also showed a fine assortment of brass ware and some very elegant china fern baskets which were very fine indeed. Here we saw the finest lot of Easter lilies we have noted this season. The plants were a little on the short side, but the flowers were splendid and the foliage exceptionally strong, heavy and green. A great variety of ferns and

Croton Reedii.

other stock is grown here which aids materially in the made-up work and all spring flowering stock such as deutzias, spireas, azaleas, cinerarias and others were in excellent shape for the holiday.

Out at Schiller's on West Madison street we found Geo. Asmus smiling and busy. The new store has now got down into good working order and is especially suitable for handling a large trade. The large double fronted store is roomy and open with fine expansive windows, these and the store being floored with mosaic tiles. At the rear of the store on one side there is a large conservatory in which stock is grown and shown and this runs clear back to the rear where goods may be delivered without going through the store. The workrooms, coal room and store rooms on the other side of the store are along the same ample lines, everything being finely arranged to handle a brisk trade. The underground cool room is an excellent idea, the temperature keeping cool without ice yet not too cool for the stock which matures and keeps in splendid order there. We noticed a pretty idea here for Easter window decoration. Pretty little pink everlastings were wired on boxwood and the deep green of the box showed up the pink of the flowers finely. On approaching the store we thought that the mullions and sides of the windows were draped with Lady Gay or Dorothy Perkins roses until we got close enough to see what it was. It is a decidedly good idea as it is not costly and lasts extremely well. Mr. Asmus also used it on the handles of his Easter baskets with good effect. All seasonable stock was in good shape and well displayed and a magnificent lot of lilies were handled. Altogether the store is one of the finest and most commodious in the city and very finely equipped.

CHAMPAIGN, ILL.—Lee Woodard, foreman for Thos. Franks & Son, has resigned his position and on May 1 takes charge of a greenhouse he has purchased for $4,500 at Indianapolis. Messrs. Franks have secured a good successor to Mr. Woodard.

Notes on Crotons.

Crotons will always be popular as small plants for table, veranda and other decorations as well as for summer bedding, and those plant growers who do not grow them are missing a profitable branch of the business. Although crotons require considerable heat, their culture, when this is given, is very simple and may be taken in hand with every prospect of success by anyone having experience in ordinary plant cultivation. A stock of plants is easily kept up where there are old plants of suitable varieties for the purpose, but it takes some time to work up a good stock from the small plants sent out by market plant growers. The present is a good time to commence, though croton growers have been working stock all through the fall and winter—since fire heat was used in the houses.

Cuttings are made by taking wood that is only half ripened—wood of the previous season. Cut this about four to six inches or more in length according

Croton Baronne de Rothschild.

to the variety and insert the cuttings in a bottom heat of 80° or 85° in sand kept always moist. The cuttings may be set fairly close together, as in this way they help to support each other, and the leaves are kept upright or nearly so, while the short time they are in the sand prevents any injury to them: these may, in fact, be kept on and help to increase root action if ordinary care is used, both at potting and in the after treatment. Respecting their care while in the sand, keep the house or propagating case close and moist, and damp the heads of the cuttings regularly as well as the sand. When rooted, which will be easily seen by a stiffening of the foliage, they may be potted in 2½-inch pots and stood on a bench in the same house they were struck in, standing them fairly close and spraying the leaves regularly two or three times daily according to the weather. For a time after coming out of the propagating bed the temperature must be kept well up and abundance of atmospheric moisture maintained, but as the plants get established the temperature can be reduced and less moisture allowed, though at no time must crotons be exposed to a dry atmosphere while growing—only when the plants are being hardened for sale or for planting out.

As a rule it will be most convenient to remove the young stock from the house in which they were rooted as soon as the roots are running well in the new compost, but this, of course, is a matter for individual growers to arrange and will differ according to circumstances. In any case the more gradual the change from the too enervating conditions obtaining in the propagating house to the more natural temperature of the growing quarters the better. Sudden changes in the temperature will cause the foliage to give way and fall, or at least to check its growth, and must be avoided. In the growing quarters proper the plants must be stood well apart in benches surfaced with ashes or gravel to allow of plenty of light reaching them from all sides and also to enable the grower to spray regularly the under sides of the leaves and damp between the pots. From this on the growing is a simple matter of shifting the plants to larger pots as becomes necessary, and always maintaining a genial growing atmosphere around them. Crotons delight in sun, and nothing else will bring out their fine coloring. It is seldom necessary to shade them except in the hottest and brightest weather, and then only a thin shade is needed to just break the rays of the sun, yet insure plenty of light at all times.

A more rapid method of obtaining good plants is by the old plan of ringing and mossing. Make an incision in the bark at a convenient place according to the size of the plant it is intended to take off and bind this with moss. Never let the moss get dry or the plants will not root. When roots can be seen coming through the moss cut the plants off below the incision and pot in the usual way, removing any loose moss without injuring the young roots. After potting, the plants should receive the same treatment as advised for newly rooted specimens from cuttings. Another interesting

Croton Spiralis.

method of raising crotons is from seed, the seed being obtained by crossing the varieties, first allowing them to flower. This hardly comes under the scope of the ordinary plant grower, but it may well be taken up with advantage, as many interesting and useful varieties may be raised this way, and, even if they are not any improvement on existing kinds they will at least be healthy, vigorous plants for trade purposes. Always harden plants off a little before shipping or using for bedding. This is done by gradually lowering the temperature, increasing the air and, as far as the plants will stand it, giving full exposure to sun.

COMMERCIAL.

Greenhouse Stock for New Jersey.

ED. AMERICAN FLORIST:

Will you please state in your columns what would pay me the best to stock up two houses, each being 80 feet long and 16 feet wide, that I can give any temperature required. Also state the temperature that would be necessary to grow said plants.

Newark. A. M. C.

"A. M. C." does not say whether he wants to grow plants or flowers for wholesale or retail business which makes the matter of answering his question, intelligently, very difficult. If he is located where he can dispose of pot plants readily at retail, these would certainly give him the best returns. Bedding plants for this spring's sale is a little late to start with now, unless he has a fair stock on hand; failing this provision then he can procure young stock of such kinds of plants as can readily be sold at fair prices when in bloom, and the only way to get the information as to the best varieties to grow is to watch the local conditions carefully and see what kinds of plants are in most demand. Or if this proposition does not meet with his approval, there are other things he can grow for next season's sales such as sweet peas, lettuce, radishes, etc. These things if well grown in a greenhouse are sure to find a ready sale, once it gets known that a reasonable steady supply can be obtained. This is if your correspondent is located near any reasonable sized town. Or again, if this proposition does not meet his views he can procure a good stock of carnations, fill his two houses with these, and sell the flowers either retail or to the florist stores in the nearest city.

The temperature best suitable for carnations is an average of 54° at night, with plenty of air on all bright days. For sweet peas or lettuce 45° to 50° according to weather conditions, with an abundance of air on all favorable times. For flowering or foliage plants there is a wide range in the requirements as regards temperature. Those classed as general greenhouse plants can be grown in 50° to 55° while the more tender plants such as begonias, palms, etc., need considerable higher temperatures to do them at their best.

"A. M. C." can start now with chrysanthemum rooted cuttings, or small pot plants, grow them for first fall crop, in one house and plant the other with best variety of early fruiting tomatoes. Then as soon as the chrysanthemums are over, fill up in succession with sweet peas or any other crop desired. Any or all of these things find ready buyers if the stock is well grown.

JOHN N. MAY.

CROTON SUNSHINE.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Cornflowers.

The blue cornflower, Cyanus minor, cannot be planted too early after the ground can be worked. Those growers who sowed in late fall will have strong stock to plant out which will be in flower well before the spring sown plants while seed sown again now in the open air and the plants thinned to the proper distance later will form a good succession to either. Although the plants continue to produce flowers over a long season the earliest produced are always the finest both for size and color and this makes the successional plants necessary, the small flowers not being so satisfactory for cutting. Probably the finest and earliest flowers from outdoors are they that are produced on self sown plants that have stood the winter outside in localities where they will do so.

Gypsophila Paniculata.

The pretty soft panicles of flowers produced by this plant are excellent for mixing with almost any kind of more showy stock and as it is so easily grown and practically takes care of itself the year through, a block of it should be grown by all who have the room. The name implies a liking for soil impregnated with lime but this, although an advantage, is not absolutely essential. Plants should be obtained at once and planted in an open, sunny position and these will flower well the coming summer and go on improving yearly. Seed may also be sown now and the resulting plants pricked out in nursery beds where they will make fine stock for planting another season. The double form figured in the issue of April 3, page 504 stands even better when cut than the ordinary form and is a very fine plant.

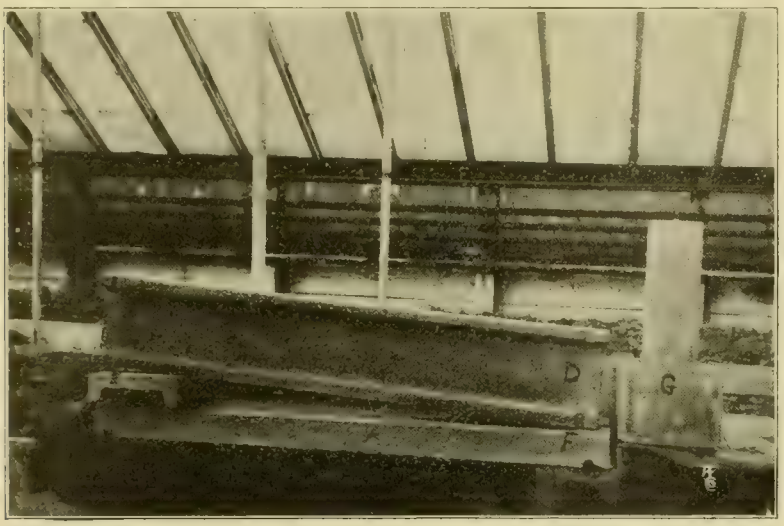
Bouvardias.

See that the young stock in pots is not allowed to get hard or run away to flower. Keep the shoots pinched and, if necessary, give a shift to a larger size pot. This should, if possible, be avoided as the bouvardia is not a strong rooting subject in the earlier stages and is easily over watered. At no time after they are established in the pots do they need much heat. A cool airy house with a comparatively dry atmosphere suits them best. Keep the plants well up to the light and keep a close watch for insects. Green fly and red spider are most to be feared, the latter only appearing in an unhealthy atmosphere unless it is already present in other plants in their vicinity. Spraying regularly with cold water will soon clean them of the spider and light fumigation is best for the green fly. With the increased sunlight the old plants on the benches will take a new lease of life and, if the flowers are likely to be needed, they will pay for a picking over, a light top-dressing of rich soil and a clean up generally. The plants will be none the

worse or less suitable for planting out later for they will have plenty of time to make a fine growth during the summer months if they are needed for another season. They are not usually worth keeping, however, after the second year as younger stock is more free in growth and produces finer flowers.

Perennials for Cutting.

The growth of some of the finer hardy perennials and biennials for cutting is a profitable branch of the business that is to a great extent neglected. A retailer who has his own greenhouses and a little land around them may add very considerably to his profits by going into their culture systematically. The finest flowers are not produced by planting a border of hardy stock in mixed kinds and leaving it alone year after year. Young vigorous stock grown on well prepared land is the only kind that pays for the trouble. Those who have followed our notes on this subject should have plenty of young stock ready to plant out but those who have not raised it for themselves may purchase clean healthy stock out of pots now and get it planted out at once or as soon as the land can be got in trim. For cutting purposes we prefer to make narrow beds about five or six feet wide with paths between as these are much more handy when cutting or shading the flowers or carrying out the necessary cultural operations. Among the useful kinds that may be planted now are gaillardias. The soil for these should be well cultivated rather than over rich and the plants may go out at one foot apart each way. Plant firmly and in such a position that they may be readily shown. The lupins, too, of the polyphyllus section, especially the white and rose pink forms, are excellent for cutting. They need more room than the gaillardias and like a fairly rich soil. Delphiniums are always good sellers, especially the deep blue forms. Seedling plants raised last fall will soon be pushing up their shoots and when these are an inch or so high is the best time to plant. One foot apart for the first season is room enough for the plants and the next season every other plant should be taken out and replanted, at the same time giving those remaining a liberal top dressing of manure. The many varieties of Pyrethrum roseum are among the finest plants for cutting and should be freely planted as advised for gaillardias. Of the yellow composites of the sunflower, rudbeckia and helenium order there are many useful plants and their perfect hardiness and ability to thrive under adverse conditions make them profitable to grow. A word of caution may be given in regard to such as Harpalium rigidum, which, when once planted, wants the whole garden to itself. In a semi-wild spot or on quarters that one is not particular about they will, however, throw great quantities of flowers at a very little expense or trouble to the grower. These few varieties named are not a tithe of the many fine things that may be included in the list but they will do for a start and, grown in quantity, may be added to at any time.



CONCRETE BENCHES.
Fig. 1.—Sills or Side Sections.

Callas.

After Easter the call for callas is not likely to be very heavy and the room they are taking up may be more profitably used. There are usually places such as alongside the walks or corridors or some not very valuable space in which the plants may be placed to finish their growth a little and be gradually dried off before being placed outside in the full sun. Few growers take the trouble to propagate these plants, preferring to purchase new bulbs in fall if the stock is to be increased or to make good any that are too old to grow again. And the bulbs are offered at such a cheap rate that it does not pay northern growers to bother with them. If propagation is desired the young shoots that crowd around the old crowns may be broken off with a little root, potted and stood on a bench close together to be planted out later or they may be left on now and potted separately in fall when the stock is brought in. As soon as all danger of severe frost has passed stand the plants outdoors in the full sun and, after watering them two or three times till they get over the change, let them alone to dry off. No other attention will be necessary until all the foliage has fallen and the bulbs have had a thorough roasting in the sun when they may be shaken out and potted in new soil for another season.

Peonies.

A method of increasing peonies that is not by any means new, yet is very seldom practiced may be noted now. A box about 15 inches square with sides about a foot high and no bottom or cover is placed over dormant roots in the open ground. This is filled with light soil to within about three inches of the top. As the plants push up the growths will soon reach the surface and will go on and flower in the ordinary way. If this soil is kept moist through the growing season the shoots will root freely in it and by the end of summer it will be practically full of roots below. In October the box is lifted and the loose soil removed when the stems will be found to have made fine eyes just below the surface and the plants can be lifted and easily divided with good roots and eyes attached to each portion. These may then be planted out in the usual way. With regard to spring planting of peonies many growers who have been unsuccessful with it should try the effect of leaving their plants until they start naturally into growth and replant when the growth is a couple of inches in height. By looking after them carefully for a week or two after planting, keeping the roots moist and protecting the tops a

CONCRETE BENCHES.
Fig. 2.—Bottom Sections.

little from sun and drying winds they will grow away and hardly feel the removal while, had they been lifted when dormant, it is quite likely they would remain dormant, if not all the season at least long enough to prevent their making a good growth or flowering freely. Those who grow for cut flowers only need only a few varieties and these of the best in their respective colors, but for garden decoration a collection of named kinds is very interesting.

Gladioli.

Flats or pots containing Gladiolus The Bride should be kept in a good light. Avoid anything approaching a forcing temperature as such will always be unsatisfactory. It does not hasten the flowers much but weakens the growth and renders it liable to insect attacks. A cool airy house, on the other hand, brings the plants along naturally. Sometimes, even with the best care, the foliage is attacked by green fly and if this occurs several light fumigations are necessary before the plants are clean. The day after fumigating, spray the foliage if the weather is bright. The Gandavensis and other hybrids are becoming very popular as cut flowers, especially such fine kinds as America (pink), Augusta (white), and May (white and crimson). The uncertainty of the price of these flowers prevents many going into their culture outside, but there is always a demand for the early flowers produced under glass and the bulbs may be planted on the benches as a catch crop after violets or other crops have been thrown out. Some growers believe in planting between carnations and other crops on benches devoted to their culture, thinking that they save room by doing so. But there is no gain; if carnations are planted at the proper distance apart there is no room for anything else and the addition of gladioli or anything else is a drawback to them. Planting outdoors is in order now just as soon as the ground can be worked. Plant in lines in beds about five feet wide. Stakes about four feet high should be driven in the corners of the beds and at intervals of about six feet along each side and, when shading becomes necessary, a light batten can be run around to hold up a single thickness of cheese cloth or some light goods to break the full force of the sun. This enables the grower to cut fine spikes with the lower flowers open and those higher up just ready to open. Such spikes give much better satisfaction to retailers than those cut with only one or two flowers open and the upper part hard in bud or with the lower flowers past their best as they soon will be if exposed to the full sun. A light soil, well enriched with old, partly decayed cow manure is best for gladioli and in such soils they not only flower well but increase rapidly.

Potting Greenhouse Plants.

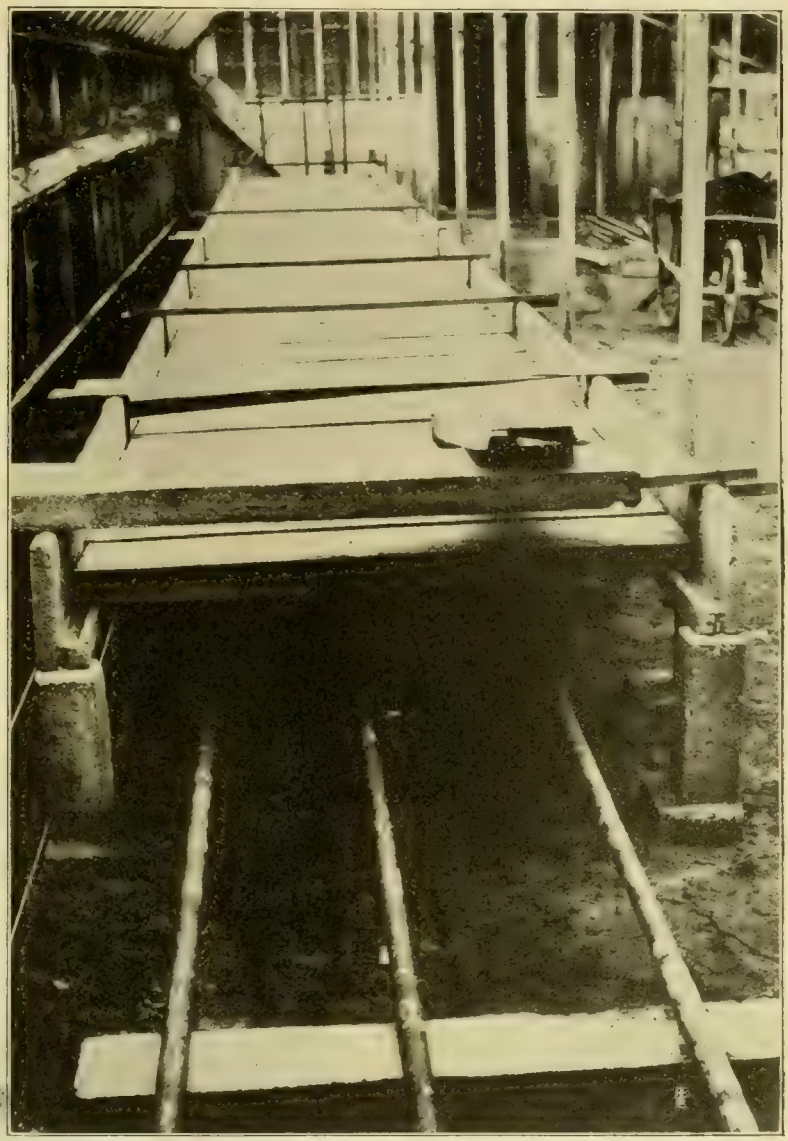
ED. AMERICAN FLORIST:—

Is it the general rule with pot plants to shift into larger pots as soon as the bottom and sides are well rooted? Do large pots retard top growth?

E. W.

To your first question, yes. To the second, no, unless the pots are too large and the soil overwatered, in which case the roots would suffer first and afterwards the heads.

A DRAFT ordinance has been published prohibiting the importation of the water hyacinth into Ceylon, under a penalty of 200 rupees ($62.40).



CONCRETE BENCHES.

Fig. 3.—Showing How Sections Lock Together.

Concrete Benches.

This form of constructing benches is evidently being given more consideration each year. The necessity of using a material which will afford permanency and at the same time not impair the growth of the stock must appeal to every florist. It is true such construction is still in the experimental state so far as its universal use is concerned. There are several who believe they have solved the problem, and doubtless they have from their point of view. But we should be liberal in our views and remember there are many men of many minds and improved methods are very likely to be worked out when united and concentrated thought is brought to bear on this subject.

We understand there are some who have tried concrete benches and are disappointed with the results, or, to be more exact, the quality of the stock produced therefrom was not up to the standard. There must have been something radically wrong in the construction and in all probability lack of drainage was the cause. We have been using concrete benches for several years and we can see no difference between the quality of stock produced on these or on board benches. We must endorse the quotation from Robt. Simpson which appears in the last issue of your Boston contemporary.

There are two ways of making concrete, one the wet system in which the material is mixed so that it is mud like, or the consistency of thick cream, so that it will flow free enough to fill the mold. The other is known as the dry system which is used in making concrete blocks. Here the material is only dampened enough so that the particles will hold together after being tamped firm and thus retain the form of the section being constructed when removed from the mold. These sections are then allowed to dry, but not reach their maximum strength until they have absorbed sufficient water.

In the first method the concrete thus formed is not porous, because the liberal amount of water has removed all the air between the particles which compose it. In the dry system the concrete is porous for the reason it is impossible to tamp the semi-dry material hard enough to dispose of the air spaces between its particles. These reverse condi-

tions can easily be demonstrated by making two slabs. Take any ordinary flat such as is used for growing plants; make one with a light bottom into which pour the wet mixture and tamp another full of the semi-dry, and when both are sufficiently hard to handle, note the difference in the amount of water they will take up.

Our sections are made of ashes and Portland cement, four parts ashes to one of cement, and are so porous that we have to be careful that the plants do not become too dry at the bottom and sides of the benches. It is certainly a great relief not to have to repair benches before refilling. When properly constructed, with a good foundation of concrete under each post so there is no danger of settling, these benches should remain in perfect condition for many years.

Fig. 1 shows the sills or side sections which are 54 inches long and reinforced with steel rods: A, outside, which comes next to the walk. B, the inside, showing flange on which the bottom sections rest. C, end view. Fig. 2 represents the bottom section, D, under side; E, end view; F, edge; G, post. The bottom sections are reinforced with steel rods at two outside edges, and at this point 2½ inches in thickness and at the center 1¼ inches. Fig. 3 shows how these sections lock together. Fig. 4 gives the general appearance of the bench when complete. This system has been very satisfactory with us and we shall continue this form of construction until an improved method appeals to us.

ELMER D. SMITH.

THE ROSE.

The Rose Grower's Problems.

A paper read by W. H. Elliott, Brighton, Mass., before the New York Florists' Club, April 12.

I do not think there was ever a time when I felt so hopelessly unable to rise to the demands of the occasion as at the present. To interest in any way the members of this club, or the rose growers of this, the greatest floral center in the world, would seem enough to undertake under ordinary conditions; but it seems hard indeed, coming as I do now, with a sorrowful and heavy heart caused by the going out of that brilliantly beautiful personality, E. V. Hallock, that it has been our great privilege to know, to honor and to love. No matter how bright the light of his genial, kindly countenance shines in our hearts and memory, or how thankful we may feel to have known him, it will be impossible to go on with our ordinary, everyday affairs without something of that serious and thoughtful life entering into our thoughts and meditations. Under these conditions I know you will expect the few words I have to say to you tonight to be a deeper, more serious view of the rose grower's problems.

You who are rose growers know, and those thinking of entering upon that career should know, that it is necessary to consecrate your lives to this work. It must not be taken up without very serious consideration. The only way to succeed is to pay the price, and that is an overwhelming and everlasting determination to put forth every ounce of energy you have. You must make it your religion and your life,—and why not? You must enter into partnership with the power that moves the universe. What grander work than developing the beauties of nature that thousands may have pleasure?

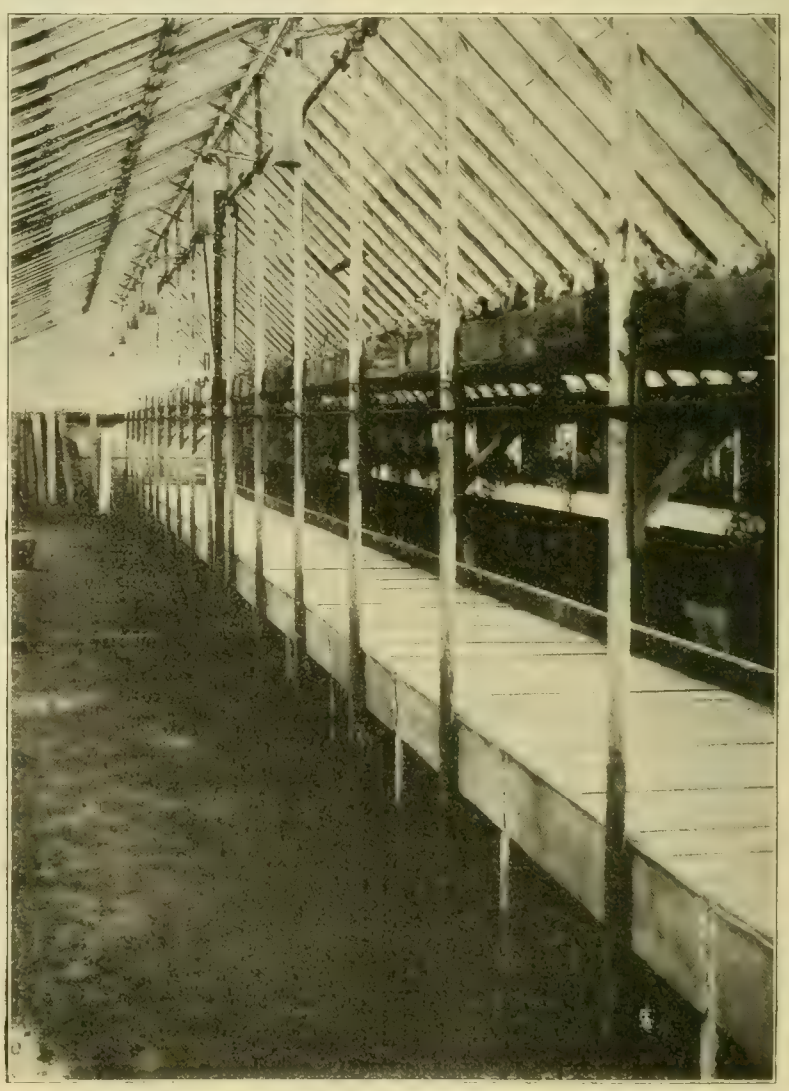
THE BEST LOCATION.

To those starting new, and to many who are not well located, a proper site for a rose growing plant is of the greatest importance. First, a good soil, an abundant water supply, a large level tract of land near the railroad station (it is better to go 25 miles farther out into the country, if you can get two miles nearer the railroad station, as the extra cost of teaming coal over that two miles, will a great deal more than make up for the extra expense in express). A large farm in a small town will usually solve this problem best, as in larger towns, farms are too great a distance from the station. A full and complete plan of an up-to-date rose growing plant will require a great deal of care, time and serious thought. All of us should plan ahead carefully what we intend to do, changing and rechanging for years, that we may develop along the best lines.

My recommendation is the large house. My latest house 60x1340 feet I find none too large. The advantages over smaller houses are many and are summed up in the fact that they produce better stock and more of it. We do not find that those that have built the large houses have given them up and gone back to the smaller ones. Those who have built large houses build still larger when they build again. The report from North Wales, Pa., is that their house built two years ago is too small, although 150 feet wide. They have now planned, and I believe have under way, in the construction of a house that is 172 feet wide and 700 feet long; over 110,000 feet under one roof. With proper construction, and good construction is absolutely necessary in these large, high houses, I believe that such a house will be a success, although I might hesitate to recommend the building of such a house.

COURAGE NEEDED.

But investment is necessary to carry out a properly planned rose growing business. First of all, you will have to invest your whole heart and soul, all your courage, and be ready to put in at all times, good large amounts of patience, and untiring hard work. Also a love for your business and the rose, like the love of a mother for her offspring. You will also need some money, but that is quite a secondary matter to the stock of courage that you should have on hand.



CONCRETE BENCHES.

Fig. 4.—The Bench Complete.

The best roses are not grown by any secret process, but by the most careful attention to every detail. Eternal vigilance is the price of good roses. You will find it true every time that the man who produces superior stock, does so by a more careful and painstaking method. If anything has been accomplished by the use of chemicals, I should like to know it. I have not been able to obtain good results from their use. I find plenty of care and cow manure produces much better and surer results. Do not deceive yourself in regard to reasons for success. We sometimes know why we fail, but why we succeed is much harder to answer. When they grow well, there is 4,000 reasons why they do so. We may know what a dozen of them are, and if, by chance, we learn one or two more, we then think we have solved the whole problem.

WORK OF THE EXPERIMENT STATIONS.

Are we getting from the experiment stations all we should? How many of us make any effort to get that knowledge, or to assist them in any way with the work that they are doing? I don't think we have used the experiment stations fairly. They are doing a great work, and should be called on to help us in the solving of many of our problems.

Aim to cut your roses when the demand is good. The grower that produces a large supply on an overstocked market and a small supply when the market is short, must not expect to get a very large return. In Boston we have a good demand in August; in October the rose market seems always to be overstocked. From the middle of January to the middle of February is a very short time. This is the time that takes our best efforts to cover. Is the demand for the very best grown roses as good as it ought to be? We seem to have much more trouble to dispose of our high-grade stock, than we do of the smaller grades. I hope you will do better in New York.

How do you decide which old kind to give up to make room for the new? What are you going to take out to make room for White Killarney? Will you give up Bride this year? Do you think that White Killarney will replace the Bride? Have you given up your Bridesmaid, and are you growing Killarney instead? I have given up Bridesmaid; next year I expect to give Bride up. What about the other new kinds? Which ones will you continue to grow for the coming year? Rhea Reid I shall continue to grow, but not very extensively. This rose came very near to being one of the best roses ever produced. My Maryland I think very well of, as a good, safe one to grow. William R. Smith is a very promising rose for summer. I intend to grow it, but only to a limited extent. Kaiserin does not give any light-colored summer rose much show. Mrs. Jardine and Queen Beatrice I have discarded.

In closing, the last word I will say in regard to the economy and saving that I have found best to practice: For many years, at the first, I thought it most important to save my money, but I now find that the money is not near as important as the saving of your nerve force, your courage and brain force, also your health and bodily force, and with what is expected of you in these high-pressure times, you will need them all.

To Be Done Now.

IN THE GREENHOUSES.

Push on with all the necessary propagating while there is still some heat being used in the houses.

Keep an eye on the shading and see that tender growths are not exposed to bright bursts of sunshine.

Keep the young rose stock well apart so the air reaches all parts of the plants or they will lose much foliage later when planted on the benches.

Spread out the bedding geraniums and pot any that still remain in the propagating benches.

Give the hydrangeas for Memorial day, a new stand with plenty of room and tie the shoots out a little from the center.

Water the newly potted cyclamens with care and if any curled leaves are seen examine them carefully for insects.

Tie out calceolarias and, where the pots are well filled with roots, give weekly waterings with liquid manure until the flowers show color.

See that the young fuchsias are not allowed to get potbound or they will flower now and this will detract from their flowering later.

Keep a bright lookout for green fly. This is the worst season of the year for it and the time when it works most injury on account of the tender condition of much of the young growth.

Do not allow young plants of Solanum jasminoides to flower in the small pots yet or the growth will be stunted and they will not be so attractive at planting time.

Unless there is a demand for the flowers keep the buds pinched off the bedding geraniums as their flowering only weakens the plants with no benefit.

OUTDOORS.

Finish all shrub pruning with the exception of roses without delay. The time for these must depend upon the locality and the likelihood of severe frost next month.

Re-graft old apple, pear and other fruit trees that were headed back for the purpose earlier in the season. Put in plenty of grafts as this results in the quicker formation of good fruiting heads.

Prepare plenty of fine soil for covering fine seeds of hardy annuals and other kinds. Some burnt earth is an excellent addition, also sand or road grit.

Prepare the quarters for dahlias with especial care. Insects are never so troublesome in early prepared borders as they are when the soil is allowed to lie until just before it is needed. Use plenty of manure.

Continue to sow sweet peas at intervals according to the demand. Give them good, well prepared soil.

Clean up the bulb beds and where any have missed fill in with the extra bulbs planted on the side if this was not neglected.

Plant hardy perennials as early as possible and give a slight protection to any that are starting into growth.

Finish all repairs to lawns, tennis courts and the turf in playgrounds. The seed sown in bare spots should be covered with fine soil and any crevices between sods also filled up.

Seaweed as Fertilizer.

Consul Douglas Jenkins, of St. Pierre Island, which is off the southern coast of Newfoundland, sends the following report on the use there of seaweed for enriching the soil: "Seaweed as a fertilizer is very much appreciated by the French fishermen who cultivate little vegetable gardens on St. Pierre and Dog islands. Even the farmers of Miquelon and Langley, the two large islands in the group, find the sea grass deposited in large quantities along the shore equally as valuable as manure from the barnyards.

"Only Miquelon and Langley can be said to have any agricultural interests whatever, but, in spite of prevailing high winds and a rocky soil, it is surprising what quantities of vegetables are produced in the little patches of ground fit for cultivation on St. Pierre and Dog islands. Dog island seems to be little more than a great rock, and St. Pierre is not much better, but here and there in the 'pockets' are found little plots of earth. These are carefully and gradually developed by annual applications of seaweed until the maximum of production is reached. From that time on the weed is used to maintain the strength of the soil.

"Seaweed is used for fertilizer in some other parts of the world, but usually the grass is first burned, and only the ashes are put on the land. In St. Pierre, however, the weed gathered on the rocky shores is spread broadcast in its natural state. Newfoundland dogs, which are largely used as beasts of burden here, are factors in this work of gathering and distributing seaweed. The faithful creatures can often be seen struggling up the hills drawing heavily loaded carts.

"Seaweed is very plentiful, especially after storms, when it is found in great quantities on the beach. The fertilizing power of seaweed is evidenced by the odor which begins to arise as soon as the plant starts to decay, becoming more pronounced and unmistakable as the decomposition advances. This odor leaves no doubt of the presence of quantities of animal matter in the seaweed. Cabbages, celery and lettuce thrive in this sea fertilizer. Potatoes, however, do not seem to do so well. Beets and certain kinds or varieties of peas also yield satisfactorily. The summer season, however, is very short."

OBITUARY.

Joseph Sondermann.

Joseph Sondermann of Brooklyn, N. Y., died of cancer April 4 in his home, 315 Winthrop street. Mr. Sondermann was born in Germany 63 years ago, and had been in the florist business for 30 years in Flatbush.

John Lent.

John Lent, one of the pioneer florists of the Ohio valley, died April 2 at the home of his daughter at Etna, O. Mr. Lent built up quite a large business in Sewickley, Pa., but, owing to ill health had to retire from it some years ago. He celebrated the forty-eighth anniversary of his wedding in February last and leaves a widow and four children.

Edward Dale.

Edward Dale, one of the pioneers of the florist and gardening business in Canada, died March 16. Mr. Dale might be said to have been the founder of the great business at Brampton, Ont., that still bears his name though to his son, the late Harry Dale, belongs the credit of bringing it to its mammoth proportions. Mr. Dale was 82 years of age, a native of Surrey, England, and emigrated to Canada in 1863 starting in business in a very small way there soon after which he built the first greenhouse, a small structure 10x25 feet which is, or was recently, still standing. Mr. Dale retired from the business some 28 years ago and has since lived most of the time in the southern part of the United States. It is said that the first produce of his garden was carried by him in a basket to Toronto—some 20 miles distant. Besides the late Harry Dale three other sons, Edward, Thomas and William, and a son of Harry Dale's, Edward, are actively engaged in the business at Brampton, the magnitude of which is too well known to need recapitulation here.

THE AMERICAN FLORIST

1885 TWENTY-FOURTH YEAR. 1909

Subscription, United States and Mexico, $1.00 a year; Canada $2.00; Europe and Countries in Postal Union, $2 50 Subscriptions accepted only from those in the trade.

Easter will be quite early next year, the date being March 27.

PROSPERITY has been so great in Bermuda this season that, it is said, the lily growers have had great difficulty in obtaining help, the hands all turning waiters.

Pearson's Case Not Serious.

Some time ago we printed an appeal for aid received from Gustave V. Pearson, a gardener of Salem, Mass., who claimed to be ill. We are now advised that medical experts have pronounced his case not serious and that there is no need of further financial assistance.

TARIFF.—Florists should again write their senators and congressmen to stand for specific duties on both seeds and bulbs.

"WINDOW GARDENS" is the title of some suggestions by Frank K. Balthis of De Kalb, Ill., reprinted from the "Nature Study Review" for December 1908.

PANSY GROWERS of Hilton, N. J., report their plants as later than usual and the supply to the retailers of Newark and New York will not be quite as large as usual.

Glass Tariff.

The cost of greenhouse glass at present is low and the tariff under the Payne bill in greenhouse sizes remains unchanged. It is to be expected that a combination will be made to bring much higher prices and the tariff committee of the Society of American Florists therefore urges each user of glass to write to his senator and congressman requesting a reduction of a half a cent a pound on common window glass.

BENJ. HAMMOND,
Secretary Tariff Committee.

American Carnation Society.

CARNATIONS REGISTERED.

By Nic Zweifel, North Milwaukee, Wis.—Badger State, Nelson Fisher X Enchantress; color, dark pink like Lawson; size, 3 to 3½ inches; very rapid grower and extremely free; flowers do not fade in hot weather; stems long and graceful, calyx never bursts. A money maker.

Bright Spot.—Lawson X Enchantress; color pure bright cerise of even shade; size 3½ inches; early and very prolific; healthy and strong grower; flowers well shaped, and are good keepers; stems long and wiry, calyx does not burst.

A. F. J. BAUR, Sec'y.

Shading Fruit Houses.

ED. AMERICAN FLORIST:—

Is it necessary to shade grape and peach houses in this section of the country? I have one house of grapes and one of peaches planted this winter, and on hot days I have noticed the foliage wilting a little. The temperature rises to 95° some days, with top and side ventilators open. I would like your advice regarding shading. I thought a light shading would be beneficial.

G. T.

Virginia.

Although, as a general rule, shading of fruit houses is not advisable, yet there are cases where a light shade may be beneficial, and wherever the foliage wilts as in the case "G. T." describes, shading of a temporary nature should be allowed. Newly planted peach trees and vines have not the grip on the soil that well established ones have, and in consequence they suffer during hot, bright bursts of sunshine. Then the foliage on young trees or vines has not to any extent covered the glass and the sun is in consequence able to exert its influence to the full in raising the temperature of the house. So although when the roof is well covered with good healthy foliage, either of the grape vine or peach, we should not counsel shading, except under the most extraordinary circumstances, yet "G. T." will be well advised to shade temporarily when the foliage shows by wilting that the sun is too strong for it.

G.

The Way the Wind Blows.

ED. AMERICAN FLORIST:—

In your spring number I see that President Poehlmann says that Mme. Abel Chatenay rose will surely return to popularity within a few years. Why! who can dispute him? This rose, after it has been staged for a day, brings to memory the hoop skirts our grandmothers wore. It has a habit of throwing its lower petals down resembling very much the hoop skirts worn in the old days and showing a decided waist; but you will notice there is a difference of opinion just now in regard to the proper place the waist line in a lady should be. From the pictures one sees it is located anywhere from the shoulders to the kilt line just above the knee, so the prophecy that Chatenay will surely return in a few years may be really true—when the hoop skirts come again.

Speaking about President Poehlmann I had the pleasure of listening to him airing his views on the tariff question as affecting the florist. A little group of us were standing in a Buffalo hotel at the rose show and to me it was a real education to hear him and W. A. Manda give their views on this stirring question. I believe that those two men ought to have been added to the tariff committee. Such a difference to the sight of another person waving a flag over his head and saying something about America for Americans. It's a vast difference which side of the fence one is on. Not many days ago we read that the original Americans were being chased farther west with gatling guns. It gives me a pain to hear patriotism linked with selfishness, and to see the flag used as a disgusting exhibition of egotism. I believe we ought to have more written up on the tariff question as it affects the florist than there is at present. We have men in the trade who could put this question in a way that the florists could understand just where they are at. There is a glass concern in New York spending money freely in sending circular letters to the trade, on the glass tariff, showing the cost of manufacture, duty, etc., and showing how the glass has been kept up by such a high tariff and those who are in favor of making it higher. The florist is vitally interested in this question, even if he only buys glass for repairing. I have purchased glass for $2.25 and also for $4 per box, the same quality and size. Those who believe in a prohibitary tariff ought to get the scales taken from their eyes, but then, Mr. Editor, you will notice that justice is usually shown with her eyes bandaged.

I was pleased to be present at the recent rose show in Buffalo. I met some of my old friends and made some new ones. John Evans of Richmond says he is against the race suicide idea and I have an invitation to see four of the finest children there are and as good a wife as ever lived. That's something like a husband ought to say, and John always knows when he has a good thing. You remember what Lauder said, "We dined, after we dined, we wined, and after we wined, everybody had something to say." But at the banquet in Buffalo, after all the dining and wining there were persons who can usually make a hit in an after dinner speech that seemed to be like the lost chord. I refer to my friend Lawrence Cotter. He blamed John Duncan for appropriating the speech he, Cotter, was to make. Whether P. Welch had given Duncan points about the speech Lawrence was to make I don't

know, but I am surprised at friend Cotter being handled so by a Scotchman.

I think my friend George Watson ought to tell us what the true shamrock is. You remember George comes out every year with a ditty about St. Patrick. I believe the florist stores in Buffalo need the education so as to sell shamrocks to the public and not be caught blushing. The Philadelphia shamrock and the Buffalo shamrock are not in the same class but probably they may give the latter an Irish pedigree because the name begins with an "O." New York will be the objective point next spring for the rosarians, and the easterners, I believe, with the help of the western boys, will put up a good show. The latter are a warm hearted lot and it is a pleasure to meet them. RAFFIA STRINGS.

National Council of Horticulture.

The fourth installment of the press service of the National Council of Horticulture has been received and contains articles on "Scarlet Sage or Red Salvia," "Easily Grown Vines" and "Pruning Shrubs." The articles are both timely and practical.

Important Foreign Exhibitions.

April 2-13.—Internationale Gartenbauausstellung, Zoological Garden, Berlin, Germany.—Siegfried Braun, secretary, Berlin N. 4, Invalidenstrasse 42.

May 19-21.—National Horticultural Society of France, annual exhibition le Jardin des Tulleries, Paris, France. Abel Chatenay, secretary, 1 Rue St. Aubin, Vitry-sur-Seine, France.

May 25-27.—Temple show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. E. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

September 8-9.—Royal Caledonian Horticultural Society, Centenary show, Waverly Market, Edinburgh, Scot. John McKenzie, secretary, 23 Rutland Square, Edinburgh, Scot.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—By up to date store man best of reference permanent place desired. Key 843, care American Florist.

Situation Wanted—Young man wishes employment in greenhouse, has had four years' experience and wishes a good place to improve himself JOHN SCHWENK, 98 Pearl St., Kingston, N. Y.

Situation Wanted—As working foreman of roses, carnations, chrysanthemums and violets; good references; married; give full particulars with wages, please. Address H. M., care 234 E. Madison St., Lancaster, Pa.

Situation Wanted—By a first-class grower of roses, carnations, chrysanthemums and general stock; also a thorough outdoor propagator of roses; married and middle aged; open for engagement by the first of May. Address Key 848, care American Florist.

Situation Wanted—By young married man as grower of carnations, 'mums, vegetables and bedding plants; either commercial or private and near Philadelphia; 10 years' experience; best of references; at liberty June 1. Address Key 828, care American Florist.

Situation Wanted—A young man wishes employment in greenhouse; have had four years' experience in carnations, roses and all kinds of greenhouse plants, and wishes a good place to improve himself; can bring best of references. Address Key 845, care American Florist.

Situation Wanted—As foreman or manager by a young married man, age 35; good business education; 17 years' experience in all departments of the business, roses especially; now employed on one of the large places near Chicago; a permanent place with good wages desired. Key 846, care American Florist.

Help Wanted—A competent young man to do general greenhouse work on retail place; nice place; county seat; near Pittsburg, Pa.; Catholic preferred. Key 844, care American Florist.

Help Wanted—A good all around man in a retail establishment married or single. Address MRS. PAUL GOBLE, cor. Hall St. and Oakhill Cemetry, Grandville, Mich.

Help Wanted—A thoroughly competent, reliable and experienced man, to fill position in retail store in Los Angeles. Apply to WRIGHT'S FLOWER SHOP, 224 W. 4th St., Los Angeles, Calif.

Help Wanted—A competent young man as assistant for greenhouse work; state age, nationality and reference. Address H. A. DEAL, gardener to Col. J. J. Ashton, P. O. Box 362, Ferncliff, Rhinebeck, N. Y.

Help Wanted—A first-class plantsman; one who thoroughly understands growing and forcing bulbs, plants, etc., used in a first-class store; only those of ability and having recommendations to show need apply. MARTIN & FORBES CO., 347 Washington St., Portland, Ore.

For Sale—In central northern state an old established florist business over 15,000 ft. glass well stocked, about ten acres land, $2,500.00 down ballance on time to suit purchaser. Key 799, care American Florist.

For Sale—Retail store business; established 10 years; cheap rent in good locality on south side in Chicago; price $500 cash; good reasons for selling; leaving city. Address Key 847, care American Florist.

WANTED.

First class up-to-date designer and decorator for my retail store. H. R. HUGHES, 690 W. Van Buren St., Chicago, Ill.

For Sale at a Bargain.

My greenhouse establishment, wholesale and retail; 35,000 sq. ft. of glass in town of 10,000, 10 miles from Chicago; also dwelling and 15 lots; must sell on account of sickness. **F. R. HILLS,** Maywood, Ill.

Competent Bookkeeper

Open to engagement in Seed, Nursery or Floral establishment. Has had practical experience in horticultural line and speaks several languages. Could assist with other work besides bookkeeping if necessary. German, age 35. Address

Key 842, care American Florist.

FOR SALE BEES

Full colonies, $7.50; Three frames of bees with queen, $5.00.

W. C. DAVENPORT, 4166 Central St., Chicago.

Landscape Foreman.

Wanted foreman on landscape construction work. State full particulars as to references, experience and salary.

KLEHM'S NURSERIES.
ARLINGTON HEIGHTS, ILLINOIS.

SITUATION WANTED
Gardener and Florist

Thoroughly familiar with European Horticuture; three years with leading growers in United States; capable of taking charge of private or commercial place; good references; age 27 years. Address X. Y. Z., care American Florist, 1133 Broadway, New York.

FOR SALE.

Wholesale and Retail Floral Establishment, well stocked; consisting of 12 large greenhouses, the majority erected within the last two years, 2½ acres of land, 12-room brick residence, shop, barn, wagon, implements, tools, etc. Everything in **first-class** condition. Owner has been in business 25 years and wishes to retire. For terms, address,

C. CRAMER, R. F. D. No. 4,
Salt Lake City, Murray Station, **Utah.**

FOR SALE.

The Greenhouse Property, to Close the Estate of M. J. Lynch, Deceased.

The old established Greenhouse property of the late **M. J. Lynch,** on the South Road, near the City of **Poughkeepsie, N. Y.,** consisting of **Sixteen Greenhouses,** thirty thousand square feet of Glass, with entire stock of Palms, Roses, Carnations, Bedding Plants, and Plants of all kinds, etc.

Eight-room Dwelling, with hot-water heating and slate roof, also.

Five-room Gardener's Cottage adjoining Greenhouses.

Large substantial Carriage House.

This is a valuable location, with ample water supply, adjoining Rural Cemetery, on line of Wappingers trolley, one mile and a quarter from Court House.

How Plants Feed.

STARCHLESS LEAVES.

It may be noted here that starch is not formed in all leaves. There is none found in the onion, squill, many orchids, common milkweed, and other plants, and a small amount only in some gentians, irises and lobelias. However, more complex substances than carbohydrates are formed in plants, the most important being amides and proteids, says W. Lochead in a paper read before the Canadian Seed Trade Association in Ottawa February 5, 1909. Amides contain C. H. O. & N., and are probably intermediate products from which proteids are constructed. Here again the various stages in the formation of proteids are not understood, so it will be unnecessary to deal with this phase of the question.

At any rate, we know that nitrogen is required, so that here the direct utilization of the soil salts brought up in solution takes place. Probably plants obtain most of their nitrogen from the nitrates of potassium, sodium, calcium and magnesium, and that an amide—the most common being asparagine—is formed from the sugars present. It is observed that asparagine is the form which most nitrogenous foods assume when in circulation; besides it is abundant as a reserve food in bulbs, tubers and roots.

The next advance is the formation of proteide from asparagine and sugars by the addition of sulphur and phosphorus, and here the compounds of these elements are utilized. Some of the proteids are soluble and are readily carried in circulation, but others are insoluble, wholly or partially. The latter must be converted into soluble forms before they can be carried from one part of the plant to another.

PROTOPLASM.

Protoplasm is a complex of proteids and is very unstable. By its own vital activities, one of which is known as respiration, it is continuously breaking down into simpler substances, first into proteids, then to amides, carbohydrates, and other products, some of which are useful, others useless. It is at the same time building up to repair the waste. When we remember that the entire skeleton of the plant, composed mainly of cellulose—a carbohydrate—is a product of the activity of protoplasm, and that perhaps most of the starch and sugar found in stored reservoirs in the roots, tubers, stems and seeds, are products of protoplasmic activity, we begin to realize how great is the activity of this complex living substance.

The processes of respiration to which I have referred go on in every living cell of the plant—in the root, stem and leaf. In the cases of protoplasm and the nitrogeneous substances the respiration process is a complicated one with many stages before the final products CO_2 and H_2O are reached. It is essentially an oxidation process, and if oxygen be excluded from a living cell the living substance of that cell will die. This explains why plants do not thrive in poorly drained soil where excess of water prevent the access of oxygen, or when seeds are buried too deeply they do not germinate, or at best develop sickly plants.

All the higher plants are provided with special tissues for the rapid conduction of fluids. If we stand a cut, leafy shoot of begonia, for example, in some water stained red with eosin or red ink for 15 minutes or longer, we will find on examination that the red fluid has ascended the stem into the leaves; further, that the stain is confined to certain portions of the stem which we call the fibro-vascular bundles; further, that the stain is confined to certain parts of the bundle which we call the xylem vessels, or the vessels of the wood. The special function of these vessels is, therefore, to conduct water and the soil salts in solution to the leaves. These vessels begin near the tips of the roots and end in the spongy tissue of the leaves. They lie outside of the fibro-vascular bundles and are supported and strengthened by thick-walled wood fibres. These conducting vessels are of two kinds; tracheal tubes and tracheids. Tracheal tubes are practically continuous tubes running from the rootlets to the leaves, while tracheids are elongated cells closed at the ends, but provided with numerous thin places on the walls, through which solutions can pass somewhat freely. The ultimate endings of veins in the leaves, and the conducting system of conifers are composed of tracheids. Although the tracheal tubes and tracheids conduct the raw materials from the root to the leaf, they also assist in conducting the food made in the leaf upward to the buds, in the spring.

To another portion of the fibro-vascular bundle, the sieve tubes, of the bast, is assigned the task of conducting most of the food manufactured in the leaves to the growing points, to the living cells, and to the storage reservoirs in the root, stem and seed. The soluble proteids and sugars diffuse into the sieve tubes and the accompanying cells and pass along slowly upward and downward to the places requiring nourishment.

The sieve tubes are elongated cells with perforated end walls, and can be traced from the leaves to the rootlets. Where medullary rays are present, some of the food is carried inward and outward into the cells of the medullary rays, some is removed by the cambium for the construction of new tissues, and some is passed on to the living cells of the cortex and other parts.

Besides this specialized circulation by way of the vessels of the wood and the sieve tubes of the bast, there is probably a more or less diffuse circulation from cell to cell upward and downward in the cells of the cortex and elsewhere. The mineral solutions on entering the cortical cells of the root may pass slowly upward by diffusion from cell to cell. Some plants have the power to manufacture food stuffs in the green cells near the surface of the stem as well as in the green cells of the leaf. Again, some of the soluble foods in the cells of the leaf may pass slowly downward from cell to cell in the cortex, and nourish those parts directly.

Our Pastimes.

Announcement of coming contests or other events of interest to our bowling, shooting and sporting readers are solicited and will be given place in this column.

Address all correspondence for this department to A. F. Faulkner, 1133 Broadway, New York; Robt. Kift, 1725 Chestnut St., Philadelphia; or to the American Florist Co., Chicago.

CHICAGO.—Bowling will be resumed at Bensinger's alleys, 118 Monroe street, on Friday evening of this week. It is now announced that prize handicap bowling will occur on the first Friday evening of each month hereafter.

Outing of the New York Florists' Club.

BULLETIN NO. 1.

The annual outing committee met March 6, 1909, and decided on the following preliminary programme:

TIME.—Outing to take place July 1, 1909.

PLACE.—Duer's Whitestone Landing, four bowling alleys, large grounds, dining hall, etc.

BOAT.—Steamship Isabel.

BREAKFAST.—On arrival of boat about 11:30 a. m.

DINNER.—Six o'clock p. m.

MOONLIGHT RIDE.—7:30-9:30 p. m.

GAMES.—Bowling, baseball, usual outdoor games, and dancing.

FUN.—From the time we start 'til we land home.

INNER MAN.—This will be taken care of in the usual generous way.

PRIZES.—For all who win them.

TICKETS.—Combination ticket, Lady and Gentleman, $5, Ladies' tickets $2, Children under 12 years of age, $1, over 12 years, $2.

SOUVENIR PROGRAMME.—Circulation 5,000. This will be a real souvenir, handsome and unique, something to keep and show your grandchildren. It will contain a picture of every member of the New York Florists' Club, beautifully engraved, arranged in groups 24 to the page, besides much other useful information and some advertising.

DUMMY.—The souvenir dummy will be ready in a few days. Write for one if you wish to advertise. It pays. THE COMMITTEE.

BUY DIRECT OF THE GROWERS

Bassett & Washburn,

Store and Office: 76 Wabash Ave. **CHICAGO.** Greenhouses: HINSDALE, ILLINOIS.

St. Louis.

A BIG EASTER TRADE.

On Friday morning the wholesale market presented a very lively appearance. All of the wholesale houses were well stocked with all varieties of flowers. This was the heavy shipping day, and the bulk of all out-of-town orders were filled. Carnations were held from three to six and roses from four to 10 cents. American Beauty roses were not plentiful, especially long stemmed flowers. Harrissi lilies and callas arrived in increased quantities. Some very good California violets were in owing to the continued cold spell and brought from $3.50 to $5 per 1,000. Sweet peas in large quantities and of fine quality sold well, especially lavender, then pink and white. Clean-up sales were made, however, at reduced prices. On Sunday morning stock was scarce, especially carnations and sweet peas, the only leftovers being jonquils and outdoor Narcissus poeticus. Fancy ferns were also cleaned out and smilax was sold at 20 to 25 cents per string. Asparagus Sprengeri and A. plumosus sold well. Many split carnations were in and sold at big prices owing to the scarcity.

NOTES.

At Smith's the supply of violets and sweet peas was enormous; on Saturday the counters were overcrowded. On Sunday they were empty, with buyers waiting for further supplies. This firm also received large quantities of lilies and carnations.

A few members, not sufficient to form a quorum, met to attend the monthly meeting of the Florists' Club last Thursday, but under the circumstances no meeting was held. Most of the members were too busy with Easter business to attend.

Young & Sons had a fine supply of flowering plants and bulbous stock in boxes, together with a fine supply of lilies, hydrangeas and azaleas. These were cleaned out. Shipping trade Friday and Saturday was immense.

A severe wind and hailstorm visited us last Tuesday and did considerable damage to some of the north end growers, many frames and panes of glass being shattered, but fortunately there were no very heavy losses.

The Riessen Floral Co.'s trade was very large. Their store on Saturday was loaded up, and Sunday entirely cleaned out. There was an immense demand for violets and sweet peas.

Arbor day was celebrated last Friday. City Forester Andrew Meyer, Jr., planted a row of trees at the Wednesday club. Several florists donated trees.

All the Kirkwood growers looked happy. They all brought in heavy consignments and they were with but few exceptions all sold.

At Angermueller's shipping trade was rushing, on Friday Fred Alves and Al Gumz having their hands full.

Alex. Siegel cleaned up all sweet peas and lilies in sight on Friday, and on Sunday was looking for more.

C. A. Kuehn had an immense stock of everything. His roses and carnations were of the finest quality.

F. H. Weber, whose greenhouse was loaded up on Saturday, was quite cleared out.

W. F.

Calumet, Mich.

The Lakeside Floral Co., with head offices in Houghton, is about to make extensive alterations in its local plant, chief among which will be the erection of a modern greenhouse, to replace its present house on North Fifth street. The greenhouse occupied by this firm since it was organized to take over the Lutey stores, is entirely too small and inadequate for the needs of the concern, and the new building is a necessity.

Give Us a Trial. We Can Please You.

Roses, Carnations and all kinds of Seasonable Flowers in Stock.

WM. F. KASTING CO. Wholesale Commission Florists.

BUFFALO, N. Y.

Florists' Supplies and Wire Designs.

A portion of the old greenhouse has been torn down and work on the new structure will be commenced soon, in order it may be completed and ready for use before next fall. The store is one of the largest and best equipped in the state, and it is planned to make it even more attractive. Miss Lucy Symons of Houghton, for several years in charge of the store, has returned and is once more in charge.

Joliet, Ill.

Albert C. Rott had a big advance call for plants, especially Easter lilies. He has just taken possession of the entire store where he has had his stand, now having for his business a floor space of 32x150 feet.

Joseph Labo had a good advance demand for both plants and cut flowers. He has a fine stock of bedding plants coming on for his local spring business.

Larson & Goranson are just completing a new greenhouse, 26x115 feet.

EASTER TRADE SATISFACTORY.

The volume of Easter business was about the same this year as a year ago judging from the reports of the leading wholesale houses. Everything moved off satisfactorily at good prices, except on Saturday, when there were too many "pickled" carnations received, and violets were too poor to be sold at any price. The weather was a prime factor and had much to do with the demand. The week opened extremely warm for the season, 74° being registered at one time on the street. Then in the middle of the week it turned cold with snow. The sudden changes scared off buyers who did not buy as they otherwise would as they feared a stormy Easter. As it happened, however, both Saturday and Sunday turned out clear and sunny. Early in the week when the days were so warm it looked as if there would be a large glut of stock, but the cold wave shut off the threatened supply, and by the end of the week lilies and American Beauty, Richmond and Killarney roses were scarce. American Beauty was extremely scarce, it being estimated that there were hardly half enough to fill orders. Other roses sold very well, with just about enough on the market to supply the demand. Cut Easter lilies were also just about equal to the demand. Pot lilies sold better than ever before, the prices going steadily up from the first of the week, and the supply being practically exhausted by Friday. Carnations were scarce early in the week, but the supply proved larger in the end than expected. Quantities of held stock were unloaded on the market Saturday, bringing down prices considerably. In bulbous flowers the supply and demand were about equal, a more satisfactory condition than has prevailed in several seasons past. Southern outdoor stock is now about done for, the heavy rains having finished off what was left. Violets were a distinct disappointment. The warm weather of the fore part of the week was damaging and they shipped very poorly. It is estimated that about 250,000 violets of inferior stock were left on the market Saturday night. What good violets there were sold at good prices. The scarcity of such stock made sweet peas a very desirable item.

April 14.—The market today is decidedly weak. The supply of both roses and carnations is growing larger. American Beauty roses, which have been hard to get, are again coming in crop with some of the large growers and are somewhat easier in

HAIL DAMAGE UNDERESTIMATED.

As noted in this letter last week the hail damage to greenhouses at Bowmanville and Ravenswood was considerable, but at time of going to press with that issue, the losses were rather underestimated than otherwise. Much cracked glass that was at first overlooked began falling under the pressure of the high wind which prevailed the day after the storm, and probably the entire damage would reach quite double the amount reported. Geo. Reinberg says his loss was about 90 boxes of glass, which was inconsiderable considering his large glass area.

NOTES.

The Wells, Fargo Express Co. will become quite a factor in the shipment of cut flowers on May 1, when this concern will commence handling the business of the Chicago, Milwaukee & St. Paul R. R. The incoming shipments over this road are a very considerable proportion of the market's supply, including as they do, the cut of the Poehlmann Bros. Co., and all the other growers of Morton Grove, as well as those of Niles Center, Edgebrook where the Geo. Wittbold Co. has its big plant, and other important greenhouse centers. The United States Express Co. has heretofore been handling all this business.

The Easter display at the Washington park greenhouses was very fine and was visited by great numbers of people. On Good Friday the snow and cold winds outside made the greenhouses a very pleasant place for the park visitors and they took full advantage of it. Just now the cinerarias are very fine; also several of the begonias, including large batches of the old but graceful B. manicata with its soft pink small flowers in myriads. Bulbous flowers are also excellent, especially lilies and hyacinths while the large genistas and azaleas are in excellent shape.

Damm Bros., who grow for Zech & Mann, were extremely successful with their Easter lilies this year, getting them in full bloom on just the days they were needed. None had to be held and some 1,300 were cut for immediate shipment, which was done direct from the greenhouses to avoid unnecessary handling.

N. C. Moore & Co. are now offering for sale cuttings of their new Nellie C. Moore pompon chrysanthemum. This is a fine lemon colored flower, coming about three inches in diameter, a vase of which was much admired at the National Flower Show last fall.

Kreitling's store space has been greatly extended and it is thought that the new office building to be erected on the site of the Victoria hotel, now in course of demolition, will greatly increase this firm's business.

The E. F. Winterson Co. has been handling large lots of cattleyas and has been supplying some of the largest retailers in this city as well as out of town with a fine article.

Miss Tonner, on the Flower Growers' Market, is showing some very fancy snapdragon in all colors, also yellow, white and purple Spanish iris.

Bassett & Washburn report an average cut of 2,000 O. P. Bassett carnations per day last week, and they were in heavy demand.

Walter Scott, of La Grange, reports a good Easter business with prices good. A somewhat better demand was noted for miscellaneous pot plants as opposed to Easter lilies.

F. W. Timme suffered a paralytic stroke about two weeks ago, affecting his right side, but is now on a fair way to recovery.

O. P. Bassett and wife returned home Tuesday night from Hot Springs, Va. Mr. Bassett was much benefited by the baths.

Many of the retailers say they had a strong demand for plants, especially such as could be retailed at from $1 to $2 each.

Geo. Reinberg was lucky with 1,500 fine Easter lilies in pots which he sold to advantage on a rapidly rising market.

J. D. Thompson is now in the advertising department of one of the big daily newspapers of this city.

H. R. Hughes had recovered sufficiently April 12 to be at the store for a short time.

Peter Reinberg is fortunate with a good crop of American Beauty roses on.

Wietor Bros. are cutting fine Killarney roses of which they now have a big crop.

Vaughan's Seed Store has just received a carload of bay trees.

The A. L. Randall Co. is showing some very fine Killarney roses.

A RECORD BREAKING WEEK.

All reports agree that the Easter trade was exceptionally good. While there may have been years when certain stocks sold for higher prices, taken as a whole, the volume of business was exceptionally large. The cool weather that came on the night of April 7 and continued until after Easter was the salvation of the trade. It saved thousands of dollars worth of stock that a week of warm weather would have rendered worthless. Reports received from leading retailers, show that their business was exceptionally fine and it is doubtful if ever before, so much stock was sold at remunerative prices. In the wholesale district there is a general sentiment of satisfaction. The leading dealers say that, while high prices were not realized, they were well cleaned out of all saleable stocks. There was more or less dissatisfaction with the condition in which many carnations and violets reached the market; but that is an old story and comes up every year.

EASTER NOTES OF THE RETAIL STORES.

At Alex. McConnell's, Windsor arcade, Fifth avenue, the main store, conservatory and other available space was filled with fine stock at the beginning of the Easter trade, and throughout the week there was evidence of good business. A feature of the stock of this store was a new crimson rambler rose, yet unnamed, which promises to surpass the old varieties.

A feature at J. P. Klausner's, Seventy-third street and Columbus avenue, was the "Hans and Gretchen" flowerholders, representing a Dutch boy and girl, each holding a shoe, after the model of the wooden shoes. These novelties were handled exclusively by Klausner, who likewise had a fine stock of plants and cut flowers.

At the large store of David Clarke's Sons, Seventy-fifth street and Broadway, there was a great stock of all seasonable plants, and trade was good from the middle of the week. It was said by a member of the firm that the highest priced plants and combinations were the first to sell.

Abraham Jacobs, who recently took the Chas. O'Reilly store at Sixty-ninth street and Columbus avenue, offered his landlord $200 for the rental of another half of a store for the Easter trade, and was disappointed in not getting it.

At the store of Christatos & Koster, Sixty-third street and Madison avenue, a noteworthy show window display was a very large camellia plant covered with white flowers. It was grown by H. Pritchard of Astoria, L. I.

Geo. M. Stumpp, Fifty-eighth street and Fifth avenue, is noted for the high class plant combinations which he offers the holiday and Easter trade. The beauty and unique features of his exhibits were unsurpassed.

C. A. Ladiges has two stores, one at 1689, the other at 1792 Amsterdam avenue. Being a thoroughly practical man and formerly a grower, both his stores were well stocked with the best in the market.

At the stores of C. A. Dards, 341 Madison avenue and 114 West Seventy-second street, we found the same high standard of stock and tasteful combinations that he has always maintained.

M. A. Bowe, at Broadway and Thirty-fourth street, always keeps a handsome and well stocked store and this year his stock was up to the high standard which he has always maintained.

Mrs. Geo. P. Esch, who continues the business of her late husband at 3279 Third avenue, had a fine Easter stock and good business.

NOTES.

A high wind on April 7, blew down the large tents which have sheltered the plant market at Canal and Washington streets. Fortunately but few plants were on hand at the time and, aside from inconvenience, the damage was slight. Through the energy of John Birnie and other leading spirits in this enterprise, everything has been again put in good shape.

A very notable display of fine designs was seen on April 12, at the funeral of Lieut. Joseph Petrosino, an honored member of the police department of this city, recently murdered in Italy. Thousands of brother officers, firemen and other city employes, escorted his remains to their last resting place. The floral emblems filled six carriages.

Nicholas Flessas, better known as "Nick the Florist" has given up his old store on Fifty-ninth street, near Columbus avenue, and moved up town to 54 Manhattan street, in the heart of the residential district. He ran a branch store for the Easter trade and had good business.

On Monday, April 12, just as soon as the Easter rush was over, Chas. Thorley removed his stock formerly at 1173 Broadway, to Broadway and Twenty-eighth street, next door to Keith & Proctor's theater. The new store is well located and fitted up in strictly modern style.

At 1241 Amsterdam avenue, Angel & Specheris have recently opened a retail store. Upper Amsterdam avenue, is now considered very desirable for business purposes as there are several of the leading educational institutions in that vicinity.

The sympathy of the trade is with Thos. Jackson of the New York Cut Flower Exchange who has just learned of the death of his mother, at the ripe age of 77 years. She died at her home near Sheffield, in Yorkshire, England.

The Hamilton Court Flower Shop is a recently organized retail concern, located at 134 Hamilton place, near One Hundred and Forty-third street. Elizabeth Talty and Max Tiebel are the active members of the firm.

Peter F. McKenny, formerly with Thorley, had an Easter store at 110 West Twenty-eighth street, with good business. He will, in a short time, open a first class retail store at 503 Fifth avenue, near Forty-second street.

Traendly & Schenck, 44 West Twenty-eight street, had a remarkably fine Easter stock. In orchids, roses, carnations, sweet peas and all other leading stocks, their offerings were of the highest order.

Lyman B. Craw, of the Lord & Burnham Co. has undergone an intricate operation, but is making good progress toward recovery.

Bulletin No. 1, published by the Outing Committee of the Florists' Club will be found in the pastimes column of this issue.

Christatos & Koster have leased 717 Madison avenue near Sixty-fourth street for a term of years.

Fred Keller is visiting the Isle of Pines.

New York Florist's Club.

The regular monthly meeting of the Florists' Club was held on the night of April 12, President Turner in the chair. While the attendance was not as large as has sometimes been seen the interest manifested was most gratifying. The paper of W. H. Elliott of Brighton, Mass., on rose growing, published on page 588 of this issue, was the leading feature of the meeting and brought out a very interesting discussion of old and new methods. After reading his paper, Mr. Elliott spoke freely of his methods in rose growing and there was a general discussion of the question, and its connection in which F. R. Pierson, Patrick O'Mara, W. G. Badgley, A. J. Guttman, C. H. Weathered, John B. Nugent, Jr., and others participated.

W. J. Stewart said he wished to hear the views of the wholesalers on Mr. Elliott's paper. F. R. Pierson and W. G. Badgley spoke of cheap transportation to market, cheap labor, large houses and permanency and durability in building. The consensus of opinion was in favor of large houses. Patrick O'Mara emphasized the advancements that have been made in rose growing and greenhouse building. Harry Barnard, representative of Hugh Low & Co., spoke interestingly of rose growing in England. A. J. Guttman said that any variety of roses will sell if well grown.

In the regular order of business, the committee on the annual dinner, held February 27, reported that the event had been self-sustaining with no expense to the club. On motion of P. O'Mara, seconded by Walter F. Sheridan, the committee was discharged with thanks, and congratulations for its good report. The outing committee reported progress. J. A. Manda, for the bowling committee, reported a contest of 15 games, to begin next month, the five men making the highest scores to constitute the club team at Cincinnati next August. On motion of Frank Traendly a transportation committee for the trip to the S. A. F. convention at Cincinnati was appointed as follows: Frank Traendly, F. R. Pierson and John Young. The report of the awards committee on the exhibits at the March meeting, which had been deferred with other business, as a mark of respect for the late President Hallock, was read and adopted as follows:

Twenty-five white Killarney roses, by F. R. Pierson, cultural certificate.

Twenty-five My Maryland roses, A. N. Pierson, Cromwell, Conn., vote of thanks.

Twenty-five white Killarney, Waban Conservatories, Natick, Mass., first prize.

Twenty-five My Maryland, Myers & Samtman, Chestnut Hill, Pa., vote of thanks.

Twenty-five My Maryland, Robt. Simpson, Clifton, N. J., cultural certificate (shown in excellent condition).

Twenty-five Mrs. Jardine, Robt. Simpson, cultural certificate.

Twelve American Beauty roses, by Brant, Hentz Floral Co., Madison, N. J., cultural certificate.

Twelve Killarney, 12 Bride, 12 Bridesmaid, by W. G. Badgley, Chatham, N. J., cultural certificate.

Twenty-five Bridesmaid, by Valentine Hamman, Summit, N. J., cultural certificate.

Rosa sinica (Cherokee rose), by W. A. Manda, S. Orange, N. J., vote of thanks.

South Orange Beauty, Wichuraiana X. Am. Beauty, W. A. Manda, vote of thanks.

Twenty-five Richmond, by A. Farenwald, Hillside, Pa., cultural certificate (an excellent display).

Vase of Killarney, A. Farenwald, cultural certificate.

Vase of Kate Moulton, Robt. Simpson, vote of thanks.

Twelve Bride and 12 Bridesmaid, by Henry Hentz, Madison, N. J., cultural certificate.

Vase of Mme. Chatenay roses, by Robt. Simpson, cultural certificate.

Harry Bunyard brought up the question of a national sweet pea association, to hold its first exhibition in the club rooms, June 30, and asked for the views of members. W. E. Marshall said he was favorable to a sweet pea society but hoped that no complications would arise between the awards and exhibition committees. P. O'Mara spoke favorably of the movement for a sweet pea society but had views similar to those of Mr. Marshall on the matter of avoiding complications. A motion by J. A. Manda, inviting the sweet pea society to hold its exhibition in the club rooms, free of charge, was carried. C. H. Weathered and C. H. Totty spoke favorably of the movement. Maurice I. Jacobs and Henry Weisman were elected to membership in the club and the names of G. L. Shiner and James Meicklejohn were proposed.

A BANNER EASTER.

In reviewing the Easter trade just past the thing of most importance was the great volume of business and the large increase in the total sales over that of last or any previous season. To begin with the growers, theirs was most complete satisfaction, as, with the possible exception of a few specimen high-priced azaleas, there was nothing left. Mark Mills of Harris' said, "Best Easter trade we ever had, not a salable plant of any kind left and could have sold hundreds each of all the leading popular kinds had we had them. Look out for us next year, for big as it was, we are going to beat it then."

Robert Craig, Jr.'s report was: "Much the largest business we ever had; all our old customers bought largely and we opened many new accounts. As to what sold best it would be hard to say. Tausendschon roses were great favorites and not one was left. Lilies, every pot gone and the same all down the line. Azaleas were great favorites; also spireas, hybrid roses, in fact every plant with a flower sold; it was a great Easter."

Godfrey Aschmann was up to his eyes in business and as a result was entirely sold out and had to turn down orders for late comers. He says the weather was most favorable for shipping and stock carried splendidly. He is now busy filling up the empty benches with spring bedding plants which he always handles in large quantities.

Chas. Mackey sold every pot of his thousands of marguerites and hydrangeas everything being sold out before Easter week. Becker, Griffin Bros., Koehler, Colflesh, Anderson, Kuhn, Coles, Carpenter, Zimmer, Yates, Westcott, and in fact all the growers unite in saying it was the best Easter they have ever had.

THE RETAILERS.

In the stores the reports are most favorable. There was in nearly every case expressed a sense of satisfaction at the increase over previous years, and the satisfactory outcome in the shape of increased profits. There was not much novelty in the plant line. Fancy baskets of growing plants were seen in the best stores, Pennock Bros. making a feature of the new gilt baskets with the raised decorations. They are certainly the richest things to date and while quite expensive there are found plenty of discriminating people willing to pay the price. They also offered a number of the rambler rose, Hiawatha, which is one of the gilt edged Easter leaders. Any rose grower who does not include this grand variety in his stock for next season is certainly not up-to-date. There was also a good demand for cut flowers, violets having a great sale, the leading wholesalers handling them by the 100,000. Prices ranged from $10 to $15 per 1,000, finally settling at the former figure. The demand was for the doubles, the singles being nearly done. American Beauty roses sold out clean as in fact did all other kinds except white, which dragged and were very plentiful the Monday after. Easter lilies were good stock, most of the commission houses held them at $15, which is in great contrast to other seasons when $12 was about high. Last year $10 was thankfully received.

Warren Baker, son of Wm. J. Baker, was buried on Tuesday last. Mr. Baker, Jr., assisted his father for several years, but on account of ill health was obliged some six months ago to give up business. The sympathy of the trade goes out to Mr. Baker and his family in their affliction.

K.

WHITMAN, MASS.—The Barrows greenhouses have been sold to Arthur D. Reed, of North Abington.

READING, PA.—The Penn Flower Shop will go out of business owing to the purchase of the property at 636 Penn avenue by a local firm of jewelers.

Fischer's Grand Freesia Purity

The Unequalled, White Decorative Freesia.

Send in your orders early if you want to secure the large sizes. I am booking large orders now for them and will have to refuse orders for Mammoth, although I will have many more than other years. My stock is absolutely pure as great pains are taken to remove any rogues that may appear. All seed pods are removed, avoiding all danger of mixture, as **Purity** does not come true from seed. Dealers getting getting their stock from me will always be sure of getting the purest stock.

For Sale by the Leading Seedsmen.

RUDOLPH FISCHER, San Gabriel, R. F. D., Calif.

Boston.

A FINE EASTER.

We may speak of the recent Easter trade in the most flattering terms, as everyone in this section feels amply satisfied with it. The retailers, as a whole, are jubilant and the only complaint to be heard is regarding the weather which seriously marred the first two of the three important days. Thursday was a genuine March day, no rain but a disagreeable wind preventing the people from entering the shopping districts. Then again on Friday a dismal rain storm occurred and for a time rather appalled the dealers. Saturday was a pleasant day and was one of the liveliest ever seen. More than ever was the desire for plants shown. Lily plants had to give way to the many species of far superior stock obtainable at no greater expense and more satisfying from every point of view. Dorothy Perkins and Hiawatha ramblers easily eclipsed anything of the sort ever displayed here before, and a superb line of azaleas in all sizes left nothing to be desired. Along with these, genistas, acacias and bougainvilleas were all shown in improved quality. A full line of bulb stock was seen on every hand. Lilacs, gardenias and lily of the valley, embracing all that was choice and pleasing, offered splendid inducements for novelty seekers and the entire stock was consumed. The cut flower department lost a good deal of business which would usually be cared for by reason of the splendid plant displays, and the retailers were not at all backward in showing their preferences. As a whole the growers were not prepared for the holiday with anything denoting quality. Everything was plentiful only of moderate value. Roses at Easter were never so common as this year and the price list showed it plainly. Outside of American Beauty which was in splendid form there was no first class rose obtainable, a serious reflection on our local growers. The stock of Beauties, mainly received from foreign growers, brought from $4 to $6 per dozen. Killarney and Richmond were poor. White Killarney was in great demand and largely oversold. This was the favorite rose. A good many Bridesmaid were discovered many of them in fine condition. Violets were abundant and the market price of $10 per 1,000 was held to until it was too late, when thousands were turned loose onto an already overfilled market at any price obtain-

GREENS....

We always have a large stock of **Wild Smilax, Galax, Leucothoes, Dagger Ferns** and all other **Greens.** We have the best in Philadelphia, and the quality of our stock will speak for itself.

Dagger Ferns, $2.50 per 1000.

able. Lady Campbell was the backbone of the trade and in fair condition only. Owing to the lateness of the season single violets were not up to the standard and a difficult stock to handle. Carnations were as poor as have ever been shown and buyers were somewhat backward about filling up on questionable stock. Lilies were disappointing in most cases and the sales were strictly limited. An open space was found in the lily of the valley, orchid and gardenia stock. They were demanded with unusual vigor and the market was in no position to respond.

NOTES.

A large touring car, the property of Henry Penn, used in delivering during the holidays, became unmanageable and after some queer antics collided with a heavy iron fence guarding the foot of Bosworth street, breaking through and then dropping 10 feet to the pavement on Province street. The machine was totally demolished but no one was injured. The entire fence, in the center of which was the historic arch and lantern which has marked this as one of the city's first streets, was completely destroyed.

Wm. Sim was well prepared for the Easter trade with a fine stock of Princess and Boston violets, his cut approximating 150,000 blooms. The unexpected and extreme weather of the week worked havoc with his frame stock all primed for Easter cutting and on one day alone the damage from wind and rain destroyed over $1,000 worth of first class blooms.

Edgar Bros. of Waverley have announced themselves as among the leading sweet pea growers and were in ideal position to meet the Easter market. Thousands of the finest white, pink and lavender blooms were cut and a light sprinkling of the finer varieties of unusual types were seen.

Mann Bros. showed a fine line of Lilium candidum for the holiday and enjoyed a heavy call. A fine crop of Easter lilies was handled in excellent shape.

John O'Brien, a retailer on Beacon street, formerly on Boylston street, has been petitioned into bankruptcy with liabilities at $3,300. Assets uncertain.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

DROUGHT since November has done great damage in southwestern Texas, practically ruining the cabbage crop.

TARIFF.—Seedsmen should again write their senators and congressmen to stand for specific duties on both seeds and bulbs.

THOMAS M. HUNTER, formerly a Chicago seedsman, now chief bailiff of the municipal court, thinks his pay should be $12,000 annually.

THE senate tariff bill is understood to have been completed, giving seeds a specific schedule as asked by the seedsmen's committee. But the bulb section has not yet been approved of on the same basis.

MCMINNVILLE, ORE.—C. S. Crego, late of Chicago, has just completed arrangements to start a seed growing farm here. His Crego asters, which are well known in the principal markets will be the specialty.

"HALFTONES may be fully as untrue to nature as the much abused lithograph, but they are far more deceiving to the average buyer," said a successful catalogue man not long ago in talking of illustrations.

HENRY ECKFORD, the English originator of sweet peas, was deprived of his highest reward in passing away before his favorite flower had reached the high tide of popularity which it now enjoys in Europe and America.

CHICAGO.—A. H. Goodwin, now in the Italian Swiss lake region, sails for home May 1.—Contract prices on the board of trade April 14 for grass seed were noted as follows: Prime timothy, $3.80 (nominal), white clover, $16.

THE penalty for the violation of the proposed pure seed law in North Dakota is a minimum fine of $10 and costs and maximum $100 and costs for the first offence; and a minimum of $100 and costs and maximum $500 and costs for the second or any subsequent offence. Copy of the proposed law can be had of Oscar H. Will & Co., Bismarck, N. D.

HOLLISTER, CALIF.—Charles P. Braslan of San Jose has commenced an action in the Superior Court of San Francisco against A. J. Pieters, Hattie M. Pieters, George W. Jean, A. J. Pieters Seed Company, W. H. Metson, Edgar T. Zook, Rudolph Herold, Jr. et al., asking for an accounting and the appointment of a receiver. Judge Van Nostrand will hear the case on April 23 why a receiver should not be appointed.—San Jose Mercury, April 10.

NEW YORK.—Wm. E. Cahill, Stumpp & Walter's popular representative, is still on the sick list. He is staying with relatives at East Bridgewater, Mass.—Vaughan's Seed Store after May 1 will be located at 25 Barclay street, corner of Church street, formerly Dorscher's restaurant and cafe. This place has been known to the trade for many years as the "Bulb Exchange." The premises have been thoroughly overhauled, the changes including new fronts on Barclay and Church streets. The firm has also leased extensive warehousing quarters with up-to-date storage facilities in Hoboken, rendered necessary by increasing business.—It is thought probable that the Wm. Hagemann business will be continued by the heirs.

Selling Texas' Big Onion Crop.

The development of the Texas onion industry is a very interesting subject. Previous to 1900, there were no onions grown on a commercial scale, but George Copp, who doubtless was familiar with the Bermuda methods, began in that year to experiment in Cotulla. This proved successful and in 1903, some 100 carloads were marketed. In 1906, the acreage was so increased that 1,000 carloads were shipped and the Southern Texas Truck Growers' Association was formed to market the product. Last year 2400 carloads were marketed and this will be exceeded this year. The above association has a sales manager and a selling price of 12-15, besides 150 brokers handling its products. The membership includes 500 growers and the policy of the organization is established by them. Until the present year onions only were handled, but this year all kinds of truck produce that is marketed in carload lots are included.

The Texas onion, according to the Manufacturers' Record, has practically eliminated the Bermuda onion, assisted by the present tariff. The season for the Texas onion is somewhat brief as the bulbs do not keep well. Shipments begin in March and are usually over in three months, winter onions from other states then taking up the supply of the market. Texas has a great advantage over California in the matter of freight rates and, as the onions mature three weeks earlier, they are quickly marketed in all the states from Washington to Maine and from Florida to Saskatchewan. Under ordinary circumstances the onion crop is worth about $1,000,000 a year; the profit to the growers depends lagely upon individual skill, some making very big money, others much less. The association has been a great help in many ways to the growers. All the seed needed is bought and imported direct from the Canary islands and membership in the association insures the grower credit for the purchase of crates and other necessities of the trade. Its work has been so satisfactory in every way that other growers of onion crops in this and other states would do well to entertain the idea of similar organization.

Worthless Novelties.

It is very unfortunate that the great awakening of Americans to the fact that a better and healthier life exists than can be obtained by the average individual of the city, is being worked by all sorts and conditions of men and women. Hundreds of articles are printed that have absolutely no value. They are written by people whose entire knowledge of the outdoor life is obtained through some encyclopedia, date of publication immaterial. Said articles are evidently passed upon by people possessing high literary judgment rather than basic knowledge of outdoors. Added to this is the stupendous amount of literary-varnish hidden advertising, covering stuff that years ago was tried and found wanting or of no commercial value whatever. Take for example the continuous bearing strawberry. This cute little white or pink berry has a long season and we have raised a little patch of it for years because the children use the fruit in playing doll house. No one would think of eating one of them if he had ever tasted real strawberries even of the particularly acid varieties generally raised by commercial growers, because they will ship well and look pretty. These little alpine berries have no merit whatever beyond their small size and the pleasure they give the children.

Another positively criminal novelty being pushed forward as a fodder plant is the spineless cactus. This fiendish thing was evidently designed by nature to grow where nothing else would. It wasn't discovered nor invented or wizarded by anybody. Every old time cowboy and every real traveler in Mexico knows that occasionally a plant of cactus without the long hard spines is found. He further knows that cattle or horses thirsty unto death, or absolutely lacking any other food will chew cactus mainly for the sweetish liquid found in the spongy pulp inside the leaf. Likewise the man who has lived the plainsman's life knows that though lacking spines, the spineless cactus usually has a superb assortment of short, needle-like hairs which irritate the flesh of the hand or mouth tremendously. No one in the wide, wide world will ever grow cactus if any other green thing will grow where he is exiled, because no man will stay in such a barren country unless it's impossible for him to get away. The famous fruit of the cactus, called tuna, is edible and so are acorns and raw potatoes, but no one living would drop the poorest known variety of apple, pear or peach to eat a tuna. There are many other things like the above that have saved life and that people will eat when they can obtain nothing else, but it is certainly dead wrong to bamboozle any one into permitting cactus to occupy ground that would produce even fairly good human or animal food.

O. V. ZANGEN, Hoboken, N. J.

We believe thoroughly in trying new varieties and each year we do try a great number of new things, some of them turn out well and some prove absolutely worthless. If we find one new thing of value or even an improvement on some established standard we are thoroughly satisfied and don't hesitate to go at it again the following year. But where we run up against a thing that is being sold evidently on somebody's name or because of a good, big, advertising appropriation skillfully handled, yet without backing by test, we go at it very sparingly indeed. If it's a good thing it's easy enough to get more, and if it's a poor thing the less time and money spent the better.—Long Island Agronomist.

Mice Versus Garden Seeds.

A new terror, especially to lady clerks, has come with the establishment of the government seed depository at Washington from which congressmen supply constituents with samples, says the Troy Times. The seeds are quite as attractive to mice as to men, and the building where the grain is stored is overrun with the creatures. As most of those employed in doing up the packages are girls, a fearsome state of things is prevailing in that branch of the government service.

Imports.

During the week ending April 10 imports were received at New York as follows:

Maltus & Ware, 64 cases, two pkgs. plants.
Wadley & Smythe, 44 cases plants.
Julius Roehrs Co., 33 cases plants, 36 cases trees and shrubs.
McHutchinson & Co., 55 pkgs. plants.
P. Ouwerkerk, 111 cases trees, 148 boxes lilies.
A. Rolker & Sons, 15 cases trees.
F. R. Pierson Co., five cases trees.
Fruit Auction Co., nine cases plants, 10 cases trees and shrubs.
Stumpp & Walter Co., five cases plants.
J. M. Thorburn & Co., 1 case flower seed, 13 boxes bulbs, 10 pkgs. shrubs.
H. Nungesser & Co., 130 bags clover seed, 1 box palm leaves.
R. F. Downing & Co., three boxes lily bulbs.
Henry & Lee, one case palms.
To others, 15 cases, 368 pkgs. plants, 23 cases, 441 pkgs., trees and shrubs, 175 bags seed, 60 cases, 36 pkgs. bulbs.

James Vicks' Sons, Rochester, N. Y.

Asparagus Plumosus Nanus
Last year, owing to the almost total failure of the Asraragus Plumosus to seed, I was unable to fill my orders but this season I am to the front with about 2 000 000 seeds.
The plants after a year's rest blossomed freely and matured a heavy crop of what I believe will be the strongest seed ever sent out of California. The Asparagus Plumosus grown here needs no introduction to you, however, as you are already fully acqaainted with its merits. You can get seeds promptly, as they are being harvested now, and can be delivered upon receipt of your order.
Seed will be sold by count, with the usual guarantee as to germination, and I will again sell at my usual low, cash-with-order prices as per following list.

I ALSO GROW LARGELY SEEDS ON CONTRACT.

List of my novelties in flower seeds for 1908 sent on application.

Notes on Mushrooms.

KEEPING UP THE QUALITY.

Many growers who produce good mushrooms during the first few weeks of a bed's bearing have not the happy faculty of maintaining the quality of the produce as the beds get older. The mushrooms that at first were thick and juicy become smaller and comparatively dry after a time. No one would think of allowing crop after crop of one kind of a slower growing vegetable to be taken from a piece of ground without anything being added to maintain its fertility, yet this is just what is expected from mushrooms. Presumably because they grow quickly they are supposed, in the few inches of manure supplied them, to keep on for months without any outside assistance.

The writer is not a chemist and knows little of plant physiology, but has studied the mushroom and its culture for many years along purely practical lines. One result of this is the knowledge that moisture is one of the principal requirements of the rapidly formed tissue of the mushroom. A constant supply of moisture at a suitable temperature and possibly under certain other conditions that render it available for the food of the plant, is absolutely necessary. Watering overhead, however, is not a sufficient or suitable method of supplying this moisture. The use of common salt, either sprinkled on the beds or given in solution in water, is one of the greatest aids known to the mushroom grower who wishes to keep up the available supply of moisture in the beds without constant watering and thereby maintain a good standard of quality in the produce.

The cooling qualities of salt are well known and we have heard growers condemn it for this reason. Personally we have no fears on this score; if used in altogether unnecessary quantities its effect may be to so cool the bed that the mycelium threads would cease running but that is not the way we use it. After about three weeks of heavy bearing we apply the first dressing of salt. It is difficult to say the exact weight we use per yard, but the appearance of the beds after the dressing is like that of newly turned up soil on a frosty day when the white tips show here and there about as large as a quarter of a dollar and an inch or two apart. A poor description, perhaps, but probably most growers will comprehend.

After this dressing we do not water the beds but damp the floor and all available dry places in the house thoroughly, the floor being, in many cases, absolutely soaking in water. The covering is replaced on the beds and the next morning, when opened up, the surface of the soil has that moist, dewy-morning appearance and feel that all mushroom growers delight in. Yet not a drop of water was poured directly upon the beds; the moisture is attracted in a more natural way. Pouring cold water on the beds not only makes the soil mechanically unsuitable for the mycelium to spread but it makes the bulk of the material cooler than the temperature of the house. This temperature question is a troublesome one and various methods, such as laying hot manure at the end of the beds, have been recommended, but, according to our experience, this is not a very satisfactory method. We rely upon careful preparation of the material in the first place and the avoidance of heavy waterings to keep the temperature of the bed about the same as that of the house and let it go at that.

At frequent intervals, after the first dressing of salt, the beds are sprinkled with weak solutions of nitrate of soda and salt alternately. We never use clear water in fact, but, owing to the moist state of the atmosphere, the waterings are not as frequent as they would otherwise be. If they were we would probably have to use clear water between times. Growers will observe that we are not putting this forward as a panacea for all mushroom troubles, which are many unless everything is well arranged and all necessary details carried out. But where the beds are correctly made of

good materials, where the atmosphere is kept right and where judicious use of covering material is made the application of food of this nature to mushrooms is of great assistance in maintaining the quality on beds that have been long in bearing. COMMERCIAL.

Stem Rot in Tomatoes.

ED. AMERICAN FLORIST:—

My tomato plants rot off at the surface of the soil. I have never had this trouble before and would appreciate it if you would tell me what to do with them. K.

If K. had given a few particulars, or better still sent a sample of the plants, we might have helped him, but in the absence of this we can only guess at what is wrong. Small plants in the seedling stage are frequently eaten off at the surface of the soil by insects and on examination appear to have rotted off. Later on, some external injury often occurs to them and causes them to damp off, while faulty watering has the same effect. Then there are several fungoid troubles that attack tomato plants and any of these may be the cause of the trouble. But in the absence of information along the lines suggested we cannot help "K." further than this.

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points April 10 were as follows: New York, cucumbers, 50 cents to $1.50 per dozen; lettuce, $2 to $2.50 per strap; mushrooms, 25 cents to 55 cents per pound; mint, 30 cents to 50 cents per dozen bunches; radishes, $1.50 to $2 per 100 bunches; rhubarb, $2 to $6 per 100 bunches; tomatoes, 10 cents to 25 cents per pound. Chicago, cucumbers, $1.25 to $2 per dozen; head lettuce, $1.50 to $2.50 per hamper; mushrooms, 40 cents to 85 cents per pound; tomatoes, 10 cents to 20 cents per pound; radishes, 40 cents to 60 cents per dozen bunches; asparagus, $2 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 40 cents to 75 cents per dozen; rhubarb, 6 cents to 10 cents per pound, extra fancy, 14 cents per pound; French endives, 25 cents to 40 cents per pound. Kansas City, cucumbers, $1 to $2 per dozen. Cincinnati, cucumbers, $1 per dozen; mushrooms, 50 cents per pound. Boston, cucumbers, $6 to $7 per box.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-Presdent; George C. Seager, Rochester, N. Y., Sec'y. Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

TYLER, TEX.—A certificate of dissolution has been filed by the Sneed Nursery and Orchard Co.

STAMFORD, CONN.—The Fernwood Nursery of New York, has bought the Lowell M. Palmer place, Hubbard's Hill.

CANAL DOVER, O.—Daniel Wyss of New Philadelphia has purchased a tract of land northeast of the city for nursery purposes.

ASHLAND, ORE.—T. H. Thompson has just completed the planting of a large tract in Bellevue to fruit. He reports trade very active.

INVESTORS are being warned, in the western daily newspapers, against bogus eucalyptus planting schemes run by company promoters.

PORTLAND, ORE.—The Salem Nursery Co. has been incorporated with capital stock $5,000. F. J. Rupert, R. E. Parsons and Roy L. Smith are incorporators.

AUSTIN, ARK.—Joseph Anthony, proprietor of the Anthony Union Nursery Co., died at his home, March 29, of consumption at the age of 42. He leaves a widow, two sons and three daughters.

VISITED CHICAGO.—Nic. Van Hevelingen, representing Kersbergen Bros., Boskoop, Holland. This firm is offering an attractive new rose of the Baby Rambler type, Boskoop Baby, a cross of Mme. Levavasseur and Euphrosine; Henry Kallen, representing Kallen & Lunnemann, Boskoop.

BILLINGS, MONT.—A new nursery company is soon to be incorporated to do a general nursery business in this city. W. H. Ralston, for many years salesman for the Jewel Nursery Co., and M. I. Tuttle of Fort Morgan, Colo., will be active in the new concern. A 40-acre tract west of the city has been purchased and the lumber for a number of the buildings is already on the ground. Berry plants in variety will be a specialty of the new firm.

TARIFF.—Chairman Rouse of the tariff committee of the American Association of Nurserymen says: "The Payne bill as passed by the house gave us what we asked for on mahaleb and mazzard cherry and myrobolan plum stocks, but made no change on any other items from rates carried by the Dingley act." On the items noted the committee sought a specific duty of $1 per 1,000 plants instead of, as at present, 50 cents per 1,000 plants and 15 per cent ad valorem.

Arnold Arboretum Notes.

A recent visit to the Arnold Arboretum found the veteran Jackson Dawson and his new assistant, — Thatcher, busy superintending the transplanting of shrubs from the nursery to some new plantings on the grounds. The season, as a whole, has been favorable, and most of the shrubs and trees have come safely through the winter. Here and there are signs of expanding leaf or flower buds and in a few weeks the beautiful walks and drives will prove the usual attraction to thousands.

In the small greenhouse and numerous frames was the magnet that had drawn the writer to Mr. Dawson's domain. This was the collection of tiny seedlings, numbering up to hundreds of thousands, and comprising perhaps 2,000 species of trees and shrubs. This lot of seedlings comprises a part only of the collection forwarded from China by E. H. Wilson. Mr. Wilson has spent the last two years in the comparatively unknown parts of the Chinese empire, collecting these seeds for the Arnold Arboretum. Very few people have any idea of the magnitude of the work he has accomplished. Fifty-six species of rhododendrons alone are represented by some 40,000 little plants in pans. Fifteen or 20 new viburnums, as many species of lonicera, and a great many new berberises are among the subjects that should be closely watched by all horticulturists. There are new chestnuts with leaves closely resembling the oaks, numerous and varied forms of oaks, castanotis, a tree with a nut seemingly intermediate between the oak and chestnut, thousands of pinus, cherries, peaches, aralias and several species of very rare magnolias.

A brief visit was all too short to inspect and enumerate the many interesting things in this collection. It will be strange indeed if this varied assortment of hardy subjects do not include many of great value to the various sections of our country. Some day we shall appreciate the magnificent work Professor Sargent and the Arboretum is doing. Mr. Wilson has completed his present trip and is expected to reach Boston on his return, early this summer. He brings with him the dried fruits of all the species that have been collected and from these fruits Professor Sargent will proceed to classify and identify the various plants in the collection.

In some of the frames are the results of earlier collections from China, Japan and Corea, many of them nearly large enough for trial in the open ground. A fine lot of various rhododendrons from Corea was noted and an especially fine berberis, with leaf of very distinct form and as finely colored as B. aquifolia.

Mr. Purdom, also in the employ of the Arboretum, has just about reached Hong Kong, bound on a collecting tour in northern China. A great deal of Mr. Wilson's work was on the frontier of Thibet.

Forest Service Nursery in Montana.

In order to arrange for the replanting of parts of the forests in District No. 1, the officials of the service have set aside a tract on the national forest at Helena, Mont., which is to be used for raising seedlings. The tract comprises 10 acres and on it will be raised from 1,000,000 to 2,000,000 seedlings which, when sufficiently grown, will be transplanted to the various forests in the district. An expert has been detailed from the service and will have charge of the nursery. He will attend to all the planting and growing of the young trees and will have charge of their transplanting. The forest service may also, at its own expense, furnish trees and plants for the city park on Mount Helena.

Native Shrubs in the Parks.

We cut the following eloquent little peroration from a paper read by Miss E. F. Andrews, Montgomery, before the Alabama State Horticultural Society:

"I have called attention to only a few of the more common of our ornamental wild shrubs. Besides these there are many others growing in the woods and swamps around us whose very names are unknown to the majority of people. Notable among these, are itea, clethra, andromeda, and the brilliant stuartia and gordonia, of the camellia family. It is not easy to say how far all these would lend themselves to the ornamentation of our city homes. There should be congruity in all things; and the conditions of city life are so artificial that the shy gypsies of the forest would perhaps not take kindly to the change. But there is one place where they would feel at home, and ought to be made at home, and that is our city parks. Every kind of native fern and wild flower and ornamental shrub or tree—such as the dogwood, sourwood, red bud, old man's beard, the spice bush, silver bell and snowdrop trees, the wild crab and the flowering plum, ought to be collected and planted there. In this way our parks would not only be made more beautiful,

but would become a sort of museum of plant history, where the children could go and study the native growth of their own state, about which many of us know less than about the exotics that have come to us from foreign lands. In our wastefulness and destructiveness the choicest of our wild plants are rapidly approaching extinction, and unless something can be done to protect them, the world of nature, like our collective human nature, threatens to resolve itself into a lawless proletariat of noxious weeds on the one hand, and an aristocracy of pampered exotics on the other. Public sentiment has, with much difficulty, at last been educated up to the point of defending our song birds, and if this society shall lend its influence to the creation of a like sentiment in favor of the wild flowers and trees, it would justify its existence by that alone, even if it did nothing else."

BOX TREES.

We have just received a carload of fine, shapely, compact trees in the following sizes:

Pyramidal Shaped

Hindering Spraying Operations.

At the request of Attorney L. F. Wingard of Champaign, Ill., special agent of the state entomologists, State's Attorney Robert Tilton, April 5, filed complaint against Robt. K. DeFreitas, James Nunes and Martin Souza, charging them with offering hindrance to the work of the department in spraying infected nursery stock. The cases were called in Esquire Dyer's court and the case against DeFreitas was dismissed upon the payment of the minimum fine of $10 and costs. The cases against Nunes and Souza were continued 10 days.

Under the state law, inspectors under the direction of the state entomologist may examine nursery stock, and if it is found to be infested, order the owner to spray it. If the owner refuses, the state may spray it at his expense. It seems that in the cases above that inspectors had found nursery stock infested and had ordered it sprayed. Upon failure so to do, officers of the state had been hindered in their efforts to spray the stock and as a result an appeal was made to the state's attorney to file complaint. The statute for offenses of this character makes the minimum fine $10 and maximum fine $100.—Jacksonville Journal.

Texas Nurserymen's Association.

At a meeting of the Texas Nurserymen's Association, held at Austin, March 30, the following resolutions were passed:

Resolved, That the members of the Texas Nurserymen's Association and others assembled at Austin are impressed with the great importance of the work devolving upon our Department of Agriculture of Texas, and that to discharge these obligations will require a strong appropriation of funds.

Resolved further, That we believe that amounts asked for by Commissioner Kane, namely, $30,000 for the Agricultural Department proper, and $10,000 for the orchard and nursery inspection laws, are very conservative estimates. We hereby urge the appropriation committee of the thirty-first legislature to grant the said appropriations amounting to $40,000.

Resolved further, That the Texas Nurserymen's Association appreciates highly the efforts of the Agricultural Department and the entire administration in securing proper amendment and enforcement of adequate inspection laws, and we pledge our co-operation and support of such laws, looking to the safety and development of our horticultural interests.

Resolved, That the sincere thanks of the nurserymen and horticulturists of Texas are tendered Gov. Campbell, the Department of Agriculture and many others of the administration for the courtesies extended us while in Austin and for efficient interest in the work in hand.

Resolved, That we learn with deep regret of the protracted illness of Hon. E. W. Kirkpatrick, our long-time member, co-worker and friend, and we wish for his speedy recovery.

Three Useful Roses.

Among the most beautiful roses we have, one must include Rosa sinica Anemone and Macartney; but they are both, unfortunately, tender, and only under quite exceptional conditions can we see them at their best. Fortunately, we have some newer varieties that are quite hardy, of extra strong growth, certain to bloom every season, and that afford us the same delicate colors. R. sinica is also known as lævigata. Camellia du Japon and the Cherokee rose. It is a very large white flower, while another named sinica Anemone is silvery pink, shaded with rose. The Macartney rose has a second name in Rosa bracteata and is pure white, while all of them are single. Now, in place of old

Dreer's Novelties in Hardy Perennials

New or Little Known Varieties Worthy of Special Attention.

LUPINUS POLYPHYLLUS ROSEUS.

Anchusa Italica Dropmore Variety. A grand improvement on the type, with intense deep blue flowers, $2.00 per doz.; $15.00 per 100.

Anthericum Liliastrum Giganteum. A giant form of the N. Bruno Lily with very large white flowers, $2.50 per doz.; $20.00 per 100.

Aquilegia Helenæ. One of the best of the Columbines, large pretty blue flowers, with large white corolla, 85 cts. per doz.; $6.00 per 100.

Campanula Persicifolia Humosa. A very large semi-double form of the peach leaved Campanula, flowers of a pleasing shade of blue, $1.50 per doz.; $10.00 per 100.

Delphinium Gold Medal Hybrids. The finest strain ever offered in mixed varieties, $1.25 per doz.; $8.00 per 100.

Delphinium Belladonna. The freest flowering of all Delphiniums, it is never out of bloom, beautiful turquoise blue, $2.00 per doz; $15.00 per 100.

Funkia Robusta Elegans Variegata. A decided improvement on all variegated forms, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Gem. A new variety that originated on our trial grounds. Flowers old gold, suffused with bright terra cotta, changing as they mature to a wallflower-red, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Beauty. Another variety which originated with us, quite distinct in color, which is lemon-yellow, with a large disc of purplish-black, $1.50 per doz.; $10.00 per 100.

Helianthus Sparsifolius. The most desirable of all the hardy sunflowers, especially valuable as a cut flower, 85 cts. per doz.; $6.00 per 100.

Four Valuable Hemerocallis. The four varieties here offered are great improvements upon the well-known Yellow Day Lilies.

Aurantiaca. Very large, bright, orange-yellow, sweet-scented flowers, 15 cts. each; $1.50 per doz.

Aurantiaca Major. Large trumpet-shaped, sweet-scented, deep orange flowers. Requires protection, 35 cts. each; $3.50 per doz.

Florham. Large golden-yellow sweet-scented flowers; very free flowering, 15 cts. each; $1.50 per doz.; $10.00 per 100.

Gold Dust. Large golden-yellow flowers, 15 cts. each; $1.50 per doz.

Incarvillea Delavayi. Popularly known as the hardy Gloxinia; extra strong roots. $2.00 per doz.; $15.00 per 100.

Iris Pallida Dalmatica Folia Variegata. A strikingly handsome variegated leaved form of this beautiful blue Iris, 35 cts. each; $3.50 per doz.

Gypsophila Paniculata Flore Plena. This is a perfect gem and as a summer cut-flower invaluable. We have a large stock of strong roots to offer this season, $2.00 per doz.; $15.00 per 100.

Lupinus Polyphyllus Roseus. This is a most attractive rosy pink form of Lupinus, producing gigantic spikes of flowers, $2.00 per doz.; $15.00 per 100.

Pentstemon Gentianoides Sensation. Gloxinia-like flowers in a variety of bright colors, including rose, cherry, crimson, purple, lilac, etc. For bedding they rival Phloxes, Petunias, etc. Not quite hardy, 3-inch pots, $1.00 per doz.; $7.00 per 100.

Primula Cortusoides Sieboldi. These are not so well known as they deserve; they are of free, vigorous growth, and can be flowered in pots in early spring, and respond quickly to forcing when placed in a temperature of 50 degrees, forming pretty pot plants in a short time, making excellent window plants, which meet with ready sale when in bloom.

We offer six distinct varieties, from pure white to the deepest rose in color, $1.50 per doz.; $10.00 per 100.

Rudbeckia Rays of Gold. In this new variety we have a refined form of the popular "Golden Glow," with which it is identical in color, habit, etc., but the flowers have narrower petals, full to the center, forming a perfect ball of gold. $1.50 per doz.; $10.00 per 100.

Stokesia Cyanea Alba. A white form of the popular blue Stokesia, equally valuable and a desirable addition; strong plants, $1.25 per doz.; $8.00 per 100.

Choice New Trollius. (New Globe Flowers.) The five varieties listed below are decided improvements on all sorts heretofore offered; of exceptional large size and good rich colors.

Gotterfunke. Large open orange-yellow flowers.

Helios. Very free flowering, pure yellow, on strong branched stems.

Leuchtkugel. One of the finest deep orange reds.

Lichtball. Large, globular orange-yellow flowers on stiff stems.

Salamander. Soft orange-colored flowers of globular form.

35 cts. each; $3.50 per doz. The set of 5 for $1.50.

HENRY A. DREER, 714 Chestnut Street, Philadelphia, Pa.

favorites that elude us season after season I would strongly recommend Una, Jersey Beauty and Evangeline. The first gives us almost a white flower about three inches across; the second, a very pale primrose yellow and the last, a charming silvery white, flushed with the same satiny rose found in sinica Anemone. All three are very large, exceptionally hardy, of strong and rampant growth, and flower very freely upon the long rods of last season's wood.—The Garden.

Willow Culture.

Uncle Sam is encouraging the growing of high grade willow rods in this country, and in the five years since the establishment of the holts at Arlington, across the Potomac from Washington, approximately a half million select cuttings have been distributed among farmers, with directions for planting and preparing for market. Particular attention is given to selecting the varieties and strains best suited to the soil where the plantings will be made.

Willlowcraft is an industry which is constantly growing in importance in this country, yet the culture of basket willow in the United States made very little progress until five or six years ago. Even now, practically all of the best grades of basket willow are imported from Europe, chiefly from France. Experiments have shown that the best grades of willow can be grown in this country at a good profit, and farmers are turning their attention to its culture more and more each year.

This year's harvest began early in March. Four approved varieties are being sent out, and only the best and most thrifty rods are selected for distribution. The management of the holts and work of free distribution of cuttings is charged to the United States Forest Service. Cuttings for experimental planting and information on management of the willow holts are furnished those who make the request of the forester at Washington.

Cuttings of new and untried basket willows were obtained from Europe a year ago and planted in the service's experimental ground. Close observations will be made upon the growth of these and if the results are favorable during the first three years, cuttings from these varieties will be distributed in the United States. In case of some varieties a much longer time may elapse before their value can be established.

Green Plants Wanted.

ED. AMERICAN FLORIST:—

Kindly suggest some ferns or foliage plants of rapid growth that would be suitable to cut for greens with cut carnations. Are there any ferns of easy culture that would grow in the soil under a high center bench? I find Asparagus plumosus of rather slow growth to give with purchases of cut flowers.

E. W.

Probably a few of the commoner ferns of the polystichum order and some of the stronger growing pterises would meet the case best. These grow freely and the only drawback with the former is they are apt to be overrun with insects. Pteris tremula is perhaps the best of all for this purpose being free in growth and keeping clean but P. serrulata and its crested forms could be grown for variety. Either of these grow strongly in such positions if not too dark.

Washington.

WEATHER HINDERS TRADE.

Trade was greatly handicapped this Easter owing to the decided decrease in temperature, and the high wind, which wrought no end of havoc with the outdoor displays. Many a good plant was ruined by exposure. The retailers as a rule take advantage of the sidewalks in order to obtain more space indoors, and also to display their stock to a better advantage. There were many novelties and artistic basket arrangements displayed which were disposed of readily, and good prices were realized for the same. Decorated plants, such as azaleas, rhododendrons and Dorothy Perkins roses, also sold well. One of the best sellers was the hydrangea, which sold from $1 to $10 each, according to size and number of blooms on a plant. It was anticipated that there would be a scarcity of lilies; such, however, was not the case, for judging by the great number of plants handled it would be safe to say that there was an over-abundance of them. They were disposed of at the usual price, 25 cents per bloom. The cool wave helped the growers to hold back their cut stock, and when it was placed on sale it was in excellent condition, and good prices were realized. About the only bulbous stock of any importance was jonquils—no others could be held for Easter.

NOTES.

Among the attractive store windows was that of Z. D. Blackistone, who showed a huge cross made up of gilded magnolia leaves. At the cross-bar was arranged loosely a spray of these leaves, and an electric lamp placed at the center of the bar illuminated the cross at night.

The feature of Geo. C. Shaffer's window was a white cross, trimmed with cattleyas. On the upright bar above the cross-bar was placed the inscription, I. N. R. I. All the other leading stores displayed made-up plant basket arrangements.

Florists' Club meeting and banquet Tuesday, April 20. G. S.

Lenox, Mass.

ROSE AND CARNATION EXHIBITION.

The annual rose and carnation night of the Horticultural Society was held in the society's rooms April 3, and was a decided success, President A. Jenkins presiding. This meeting was one of the largest and most interesting the society has held for some time, the members turning out in full force; they were amply rewarded for their trouble. Seldom, if ever, has there been seen such a magnificent display of roses and carnations in Berkshire county, and it reflects great credit upon the gardening fraternity. Two exhibits upon which special praise was bestowed was a magnificent vase of rose white Killarney, Waban variety, exhibited by F. R. Pierson Co., Tarrytown, N. Y. The flowers staged were in perfect condition, which speaks well for its shipping qualities, and were awarded a first-class certificate, the society's highest award. Another exhibit of sterling merit was a vase of 50 flowers of Bay State carnation, exhibited by the introducer, A. Roper, Tewksbury. This seems to combine all the desirable qualities of a first-class variety, the flowers being large, from 3½ to four inches, and carried on stems strong enough to support them perfectly. As a variegated variety it is so much ahead of any other as to place it in a class by itself, and it was unanimously awarded a first-class certificate. The standard varieties were shown in first-class shape. Beacon took the honors as a scarlet, while Rose Pink Enchantress, Enchantress, Winsor, Afterglow and White Perfection were equally well shown in their respective classes. The following is the list of the principal awards:

A. J. Loveless, first for 24 Enchantress, Winsor and 12 Rose Pink Enchantress, and second for 24 Beacon. A. H. Wingett, first for 24 Beacon, 12 White Perfection Enchantress and Afterglow. S. Carlquist, first for 12 Beacon, second for 12 Enchantress and White Enchantress. D. Dunn, second for 12 Beacon and Rose Pink Enchantress. A. McConnachie, third for 12 Enchantress and White Enchantress. F. Herremans, first for a mixed vase of 50; also a diploma for a fine vase of Gardenia Veitchii.

The judges were E. Jenkins, W. Jack, R. Speire and G. Breed. Sidney Witney was unanimously elected an active member of the society. E. Jenkins gave an interesting description of the recent Boston spring show, which he described as the best exhibition he had ever seen anywhere, laying particular stress on the beautiful Japanese garden arranged by R. & J. Farquhar Co., and complimenting that firm on its enterprise. After the business of the evening was disposed of refreshments were served, and after cigars had been passed, the evening was enlivened with songs and recitations by several of the members present. A most enjoyable evening was brought to a close at midnight.

G. H. I.

MARY TOLMAN

A New Light Salmon Pink Carnation.

Of a somewhat warmer tone than Enchantress, and does not fade on the edge of the petals, having a clear, even shade all over the flower, which measures from 3 to 3½-inches, although 4-inch flowers are very common. The stem is long and stiff, holding the flower perfectly erect. The calyx is very strong, and as a producer, it comes early, is very free and continuous.

Orders booked now for January 1910 delivery.

$12.00 per 100; $100.00 per 1000.

CHICAGO CARNATION CO., Joliet, Ill.

A. E. HUNT & CO., Evanston, Ill. HUNT BROS., Park Ridge, Ill.

SANGAMO.

Is the new, brilliant, glistening **PINK CARNATION** shown at Indianapolis and awarded the A. C. S. Certificate of Merit, attracting the attention of every carnation grower on account of its very pleasing color, long stiff stem and well formed flowers, measuring 3 to 3 1-2 inches. The calyx is strong, and as a producer it cannot be excelled.

Orders booked now for January, 1910, delivery.

$12.00 per 100; $100.00 per 1000.

Grown and disseminated jointly.

A. C. BROWN, Springfield, Ill. CHICAGO CARNATION CO. Joliet, Ill.

CONQUEST A NEW SEEDLING CARNATION

To be disseminated next season. This is a variety that florists have been wanting ever since they discarded Prosperity.

Conquest is a light flesh pink, overlaid with a deep rose pink, the color extending over the petals from the center almost to the edge. It does not fade, making it a most beautiful and attractive flower. Its habit is somewhat on the order of Lawson, although the stem is somewhat longer and very stiff. The flowers are well filled and nicely formed, which add to its attractiveness. Without a doubt, it will be the most attractive as well as the most profitable variety to be disseminated the coming season.

Orders booked now for January 1st, 1910 delivery.

$12.00 per 100; $100.00 per 1000.

Greenhouses: Hinsdale, Ill. **BASSETT & WASHBURN,** **Office and Store: 76 Wabash Ave., CHICAGO**

Grand Rapids, Mich.

Easter, 1909, will be long remembered. The Monday and Tuesday previous were very warm, 80° in the shade, but on Wednesday there was a drop of 50° in about 14 hours, and the remainder of the week was unseasonably cold, Friday and Saturday being below freezing, which made it necessary to take extra precautions in wrapping everything against frost. From the reports which have been gathered the volume of business done is fully one-fourth larger than that of last year. One firm reports about one-third larger, and one or two others a little short of one-fourth, but taking Easter as a whole every one seems to be well satisfied.

NOTES.

Eli Cross had a record-breaker in bulb stock. Tulips, hyacinths and daffodils were in extra demand. He had 5,000 lilies which were cleaned up in good shape. Carnations were extra good and sold at 75 cents per dozen.

Henry Smith says there was no choice; everything that was nice went at a good figure. Rambler roses and American Beauty were fine and went right, plenty to go around. A few lilies left, but nothing like last year.

Miss Madge Dolan, who has a stand in the Plantland hotel, in addition to her plant on Quimby street, says: "The best Easter I ever had. Cut flowers went much better than plants."

Alfred Hanna & Sons report a substantial increase handled much easier than last year, their new quarters being much better in every way for quick service.

Paul Gobel reports business considerably better than last year; plants sold well and he could have sold more if the weather had been warmer.

Miss Mary Hartnett says business was brisk—much better than last year, the demand being equally divided between plants and cut flowers.

Wm. Cunningham says business was entirely satisfactory, with plenty of everything and much easier to get the price than last year.

Wealthy Avenue Floral Co. says: "We are very well satisfied. Roses, carnations and lilies were the leaders."

Jas. Schols picked 30,000 violets from one house, which cleaned up in good shape, but he filled all orders.

Peter Kunst reports sales about the same as last year, with a good demand for carnations.

Bruinslot & Sons report a large shipping trade and plenty of flowers to go around. B.

FREEPORT, ILL.—Considerable glass in the greenhouses and hotbeds at the John Bauscher, Jr., place were broken in the recent gale. The wind getting under the sashes tore the frames from their fastenings and hurled them through the air. In falling they lighted on other glass, causing further damage. In glass alone, Mr. Bauscher estimates his loss in the neighborhood of $200.

THE LEEDLE FLORAL COMPANY, SPRINGFIELD, OHIO

Pittsburg.

The summary of the Easter business proves it to be the most satisfactory and largest for many years, the retailers cleaning up entirely. The plant trade was excellent. A little pickled stock was in evidence; some of the violets seen were very poor, good color but falling. The orchid market was very brisk, with some very fine stock in circulation. Among the down-town stores, the varied exhibit of flowering plants and artistic window displays certainly was grand, and gained the admiration of the most critical.

NOTES.

At Randolph & McClements, Penn avenue, Easter baskets of all kinds and sizes were displayed, and after seeing them one could hardly decide which was the most beautiful. At Baum and Beatty streets they had a gorgeous show.

At the east end store of H. L. Blind Bros. one could see fine plants from their West View conservatory. The skill and artistic taste was shown in the most attractive manner.

L. A. Smith, Wheeling, W. Va., is at his post again after spending four months in the hospital.

W. S. Kidd, Beaver, lost the manager of his New Brighton store, his daughter, through marriage.

James Hargreaves was recently appointed superintendent of the city park of E. Liverpool, O.

John B. Dixon, Wheeling, W. Va., bought out J. E. Foster of the same place.

Wm. Schmidt, Johnstown, got his new store in shape for his Easter trade.

J. J. Beck, New Castle, Pa., is remodeling his store.

Visitors: L. Swarthout, Washington, Pa.; B. F. Engle, Rochester; Mr. Romen of F. R. Pierson Co., Tarrytown, N. Y.; Martin Reukauf, enroute from San Francisco. J.

Syracuse, N. Y.

If the weather conditions had been favorable the Easter business in the flower trade would have been the greatest in its history. Cold and unfavorable weather proved detrimental to trade and made the business hard to manage. The greatest demand was for pot plants, although some cut flowers were sold. The question of delivering was a perplexing one. Every available baggage wagon was pressed into service on Saturday night, and many orders were not filled until Sunday morning. In addition to the firm's own wagons and baggage wagons hired from the liveries, P. R. Quinlan & Co. had a large automobile covered truck from the Oldsmobile agency, with the firm's name on a banner on either side of the machine.

A. V. B.

Cleveland.

A BUSY WEEK.

The past week was a busy one, and it certainly has proved a banner year despite the weather conditions, which were bad up to Saturday afternoon. At the time of our last writing it was blowing a blizzard, regular Christmas weather, and the same thing was repeated Thursday, Friday and Saturday morning, but in the face of all this everything sold up pretty clean daily, Easter lilies being especially scarce at any price the latter part of the week. Violets, although not as good in quality as they generally are, were scarce and sold at good prices. Carnations and roses brought top-notch prices, and the quality was never better. Richmond roses were scarce. Sweet peas had an excellent run, as did all other stock. There was little doing on the street this week, as the prices were too high for the fakirs, and the stock too good for that class of trade. From all reports this has been a big year, and the florists and greenhouse men who worked nearly all year for this day were well repaid for their labor.

At the Sheriff street market house the growers outdid themselves on Saturday, this being the occasion of their annual flower show. The booths were stocked 15-20 feet high with azaleas, ramblers, hyacinths, tulips, lilies and all the various kinds of Easter and spring plants, until there was scarcely room to move, and the crowds that attended the sale were a sight for florists' eyes, although in the morning the faces of the already tired florists showed signs of disgust at the prospects for the day's outlook, besides their look of weariness, but when it did eventually clear up, the rush and scramble to get plants and flowers fully repaid them for their morning's anxiety. The music and flowers drew immense crowds that thronged the aisles and balconies of this large and well-planned market, testifying better than words can say the appreciation of the general public for this yearly treat. Three prizes were awarded to the best displays and were divided as follows: G. M. Nauman, first; Sam Pentecost, second; Casper Aul, third. To the writer's eyes the judges certainly had a hard proposition, as several other displays were entitled to much praise.

NOTES.

At the downtown retail stores the window displays were grand. Smith & Fetters' window, which is always good, was even better than the previous week. Many were the compliments the artist received. At Gasser's, Wagner's and Eadie's, all of whom had grand displays, the crowds that stopped to look and buy, showed their skill and efforts were not wasted, and their sales also showed the selling power of a good window display.

When making a delivery at the Westman & Getz' store, 5923 Euclid avenue, about 6 p. m. Saturday, the delivery man from The Florists' Exchange found the door locked, and the proprietors and force of clerks were eating a lunch in the rear of their store. Everything had been sold, and enough work to fill orders to keep them busy all night and possibly next day, and this at 6 p. m. It certainly speaks well for their business ability.

C. F. B.

YOUNG ROSES

2½-inch

Positively the Last Call for the Season.

These Prices Are Made to Sell This Stock Lively

(Orders booked now and plants held till you are ready for them after the Easter rush, or later.)

JACKSON & PERKINS CO., Newark, New York.

Lancaster, Pa.

"All is well in Carnation town" so say the growers, and surely they know whereof they speak. That there is a brighter feeling abroad is evidenced by the fact of the heavy shipments made to both the Philadelphia and the Pittsburg markets and the good returns for the product. The weather, too, is ideal if 72° early in April is desirable.

H. D. Rohrer has remodeled his greenhouse range throughout. One section has been rebuilt during the past summer. Mr. Rohrer's carnations, which constitute his specialty, are invariably of a high grade and command the best market prices at all times. The Enchantress trio are his favorites and well they deserve the space given them. Beacon, in Mr. Rohrer's estimation, is the only red worthy of consideration, although Victory and Robt. Craig are likewise to be seen on his place, both looking well. White Perfection is in a class by itself as grown here.

B. F. Barr & Co. have moved into their new store on Duke street, the counterpart of State street or Broadway in this city. It is a model and up-to-date store, handsomely furnished and splendidly equipped to draw trade. They still retain their old store on W. King street. With a general stock that it would be hard to surpass and that spells dollars at sight, Mr. Barr has ample reasons for joining the ever widening circle of optimists.

Albert M. Herr, who divides both his attention and his greenhouse space between carnations and geraniums, reports an unusually heavy demand for the latter. His facilities, however, enable him to keep up with the demand up to the present. It is his intention to double his output next season and to confine himself to three or four of the best and the most desirable standard varieties. His carnations never looked better.

H. H. Girvin of Paradise has his place in the pink of condition and his stock never looked better. The Enchantress, in his estimation, will hold out for at least another generation. "Talk about this variety running out! Whoever says that simply does not know how to handle a carnation and that is all there is to it." The scribe did not contradict the assertion.

W. B. Gervin of Leola considers Winsor the best ever. So well does that variety behave for him, that 10,000 will be the quantity planted next season on his place. Enchantress, both light pink and white, White Perfection, Beacon, Robt. Craig and O. P. Bassett, will make up the rest of the varieties to be planted.

E. P. Hostetter of Manheim has a large crop in sight for Easter. He has been cutting heavily all along. Besides carnations he grows antirrhinums and finds a good sale for them in the Pittsburg market. Mr. Hostetter's general stock, as usual, is in splendid condition.

Elmer J. Weaver of Ronks finds a brisk demand for all the carnations he ships to the Philadelphia market. Mr. Weaver contemplates making a few alterations and possibly an addition to his already extensive place. S.

CALUMET, MICH.—A. E. Lutey, who has, as recently noted, sold out his business here and in Houghton, will leave shortly for Seattle, Wash., where he intends to locate.

ATLANTIC, IA.—Business at the Atlantic Greenhouse Co.'s is in splendid shape and the manager, Chas. Olson, is justly proud of the great advance made since he took charge.

STERLING, COLO.—D. E. Smith, owner of the greenhouses on the Atwood road has purchased additional land around them and is going in largely for vegetables and vegetable plant growing inside and out. He is also going to build more glass for cut flower and plant growing.

Miscellaneous Plants

Ampelopsis Veitchii, 4-in. pots, $1.50 per doz., $10.00 per 100.
Ferns, Boston 3-in. pots, $4.00 per 100.

HEADQUARTERS FOR

ARAUCARIAS

"By jingo," was the remark of a bright looking gentleman, as he stepped with his lady friend into one of our Araucaria houses. "If these are not the best shaped and finest looking specimens of **Araucaria Robusta Compacta, Glauca** and **Excelsa** I have ever seen, *then I am a shade.* ☞ Just look! What a sight this time of the year, one as nice as the other!"

Araucaria Robusta Compacta, Glauca and **Excelsa.** Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen. As big as an elephant, for 75c; as big as a jumbo for $1.00; and as big as a holy terror, for $1.25 to $1.50.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-7-8 in. pots, 4-5 year old, 4-5-6 tiers, 20-25-30-32 in. high, same in width, $1.50 $1.75, $2.00, $2.50 to $3.00 each,

Araucaria Excelsa, 3-4-5 year old 4-5-6-7 tiers 6-in. pots, 20-25-30-35 in. high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

CARRILLO & BALDWIN, Secaucus, N. J.

Orange, N. J.

The regular monthly meeting of the New Jersey Floricultural Society was held April 9 in the clubrooms. Chas. H. Totty addressed the gathering upon the chrysanthemum. He confined himself in the body of his paper to the history of the flower and its commercial development and left the cultural side to be brought out in the discussion which followed. The subject as handled by Mr. Totty was full of interest in both departments. Mr. Totty in forecasting a further development of the flower in the next 35 years, announced that he has several surprises himself for future dissemination. A letter from Daniel MacRorie upon the scenery and flora of the Pacific coast where he has established himself as a wholesale dealer and importer of orchids, etc., was read. The usual display of the season's flowers filled the tables. Andrew Greer was elected a member.

Arthur T. Caparn, for a number of years in charge of the estate of Stewart Hartshorne at Short Hills, has resigned to go into business for himself and has been succeeded by Wm. Hyland.

S. Wyatt has succeeded John J. Dervan at A. C. Van Gaasbek's.

J. B. D.

HACKENSACK, N. J.—H. S. Mabie has opened a new store at 148 Main street under the name of the Ideal Store.

A WHITE CLIANTHUS.—A correspondent of The Garden writes as follows respecting the flowers of a white clianthus: "I noticed that you had received flowers of a white form of Clianthus puniceus. I think there must be some mistake, as I have never heard of a white-flowered kind of this plant. The variety is more likely to be Clianthus Dampieri alba, or, as it is sometimes called, the Dutch flag, possibly from its coloring, white and red. I noticed in our greenhouse the other day that some of our plants of this had flowers well advanced and almost ready to open. I have much pleasure in sending you a photograph of this variety for comparison, also one of Clianthus Dampieri as grown here last summer."—The editor has the following footnote: "There is a white form of Clianthus puniceus which was introduced 10 or 12 years ago and is by this time well known. It has nothing to do with Clianthus Dampieri."

Best Quality. Hand-made

Greenhouse Glass

Now is the time to buy.

Prices are extremely low.

——WRITE US.——

Baur Window Glass Co.

EATON, INDIANA.

MASTICA

MASTICA is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass, as occurs with putty. LASTS LONGER THAN PUTTY. Easy to apply.

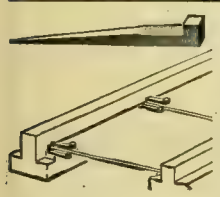
THE BEST WAY

to collect an account is to place it with the

National Florists' Board of Trade

56 Pine Street, NEW YORK,

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.



Siebert's Zinc Glazing Points.

Good for small or large glass. do not rust, easy to drive 5/8 and 7/8 inch Per lb. 40c. 5-lbs. $1.85. 20-lbs. $7.00.

VAUGHAN'S SEED STORE, Chicago or New York.

ROSE RHEA REID.—This American raised novelty, says The Garden, is the result of crossing American Beauty and a red seedling, and as a summer bedding variety, both in Paris and America last season, it is said to have proved to be the finest of outdoor varieties, bearing the unprecedented drought with impunity and providing a sheet of crimson-scarlet throughout the summer. As exhibited recently before the Royal Horticultural Society as a forcing variety the color was pale red, the blooms very full and the older petals rolled back at the margin, as is the case with La France and others. Whether the remarkable discrepancy of color as stated above is due to the forcing treatment and the absence of winter sun in England, we do not know; but in America its success as a forcing variety is said to be variable. The variety is certainly a free-flowering one, and if it can endure long continued drought will not be wanting admirers on this side of the Atlantic. It is, we believe, from the same source as the welcome and now indispensable Richmond.

YOUNGSTOWN, O.—John Walker held his annual reception at his greenhouse at Crab Creek April 4.

BAY CITY, MICH.—Potratz & Schweers have taken possession of the old Wm. Reuther greenhouses and are conducting a retail business there.

Davenport, Ia.

The Tri-City Florists' Club held its regular monthly meeting at the residence of its ex-president, Wm. Knees of Moline, Ill., nearly every member being in attendance. The topics for the evening were "The Hail Storm," and "Would it be a Benefit to the Florist to Hold a Flower Show." The club was divided as to the benefit so the question will come up again at some future meeting. A. Anderson had on exhibition some very fine seedling carnations, which won the admiration of all present. One of the seedlings was variegated yellow and red, a good flower with fine, stiff stem and a first class carnation in every respect but color. Two others, a red and a light pink, will bear watching. One new member was added to the club. After the other routine matters relating to the late banquet were disposed of, the members adjourned to the dining room where a fine luncheon awaited them, after which an hour or so were spent in sociability.

NOTES.

A terrific hailstorm visited this locality on the evening of April 5, doing a great deal of damage. Hail fell measuring three inches and more in circumferance and every florist in the three cities lost glass with the exception of Wm. Knees and John Staack. The Bills Floral Co. lost about 2,000 panes, Chas Hunwell, 400, Central Park Greenhouses, 800, Bahr, 200, Henry Pauli, 500, Ewoldt Bros., 523, Ludwig Stapf, 750, Henry Gaethje, 800, Henry Brookman, 650, — Davis, Miss R. Woltman, Underhill and Asmussen sustained heavy losses. John Temple lost about 600 lights and Henry Behring, 125. Garrett lost nearly one-third of his glass. Hotbeds were completely wiped out of commission. Had there been the least wind no doubt it would not have left a pane of glass in the establishments of the firms named Luck, however, was with the florists, at least for two days, as it remained above the freezing point. On April 8, the thermometer went down to 20° and April 2, to 12° above zero. Nearly all were fortunate enough to carry hail insurance.

Cold and heavy wind is on hand for the Easter business. If this weather keeps up, lilies will have to be wrapped in horse blankets for delivery.

Wm. Knees is planning to visit his mother in Germany this summer, intending to leave the first week in June.

T. E.

LAFAYETTE, IND.—Herman Roth intends to double the capacity of his greenhouses this season and, when complete, it will be one of the finest plants in the state.

POTTSTOWN, PA.—The flowers at the funeral of Mrs. H. T. Narvell of Cleveland, O., April 3, were very choice and the designs most elaborate. Their value was estimated at $4,000 and they covered the entire lot in the cemetery.

A 256-Page Book Free

Every greenhouse owner will want one of these books. It contains over 2,500 valuable hints and pointers for the grower and 700 remedies for diseases and insects. It gives you formulas for standard remedies, and is **worth $5.00** to anyone who is in the trade.

WRITE FOR THIS BOOK

If you have no printed letter head, send us 25c to pay the cost of printing and the postage, and the book will be sent you promptly. You will never regret buying one of these books, and if you have a printed card, envelope, letter head or stationery of any kind, you will get the book, postage prepaid, free of cost.

The Celandine.

Pansies, Lillies, King-cups, Daisies,
Let them live upon their praises;
There's a flower that shall be mine,
'Tis the little Celandine!
E'er a leaf is on a bush,
In the time before the thrush
Has a thought about its nest,
Thou wilt come with half a call,
Spreading out thy glossy breast,
Like a careless prodigal;
Telling tales about the sun
When we've little warmth or none.

Careless of thy neighbourhood,
Thou dost show thy pleasant face;
On the moor or in the wood,
In the lane—there's not a place
Howsoever mean it be,
But 'tis good enough for thee.

—WORDSWORTH.

SUGGESTIONS FOR PLANT GROWERS.

Salvias.

Look carefully after the young stock now, whether seedlings or from cuttings, and do not allow them to get hard in the pots. Avoid overcrowding, too, as these cause checks to the growth that are followed by flowering and not by the healthy growth that is desirable now. Where the stock is likely to be sold out clean at bedding-out time it is a good plan to root some cuttings now to plant in flats and top them once. Then at the middle or end of June these can be planted out in good soil, kept pinched, and will produce a lot of fine cuttings in August and September for stock purposes. Make the cuttings of the soft tops and side shoots and they will root very rapidly.

Foliage Begonias.

The make-up of some of the baskets used at the recent Easter showed the value of the smaller-leaved varieties and species of begonias of the Rex and similar sections. The heavier large-leaved kinds are not so good, but the color in the foliage of these small kinds, especially if kept to small pots and grown in a good light, is exquisite, and a return to favor of many of the old and half forgotten species and varieties is not at all unlikely. Where stock is scarce the leaves may be used for propagating, simply breaking the midrib in one or two places and a few of the stronger sub-divisions of the raised veins and pegging them down on pans or flats of sand kept constantly moist. Young plantlets will soon appear and may be first pricked off around pans and later potted singly to be grown on. Nothing is easier to grow, and anyone who has a demand for small and cheap made-up devices ought to raise some at least.

Small Fine Foliage Plants.

The principal point in the culture of small ornamental stock is to keep it always moving and always have new plants to replace those that are past their best. Frequent propagation is necessary for this and should go on practically the year around. For summer use a portion of a bench should be divided off and surrounded with linen or other material as used for shading, this keeping the divided-off part closer and moister than the other portions of the bench. Here, without any bottom heat, many of the small foliage plants such as petunias, tradescantias, panicums, coleuses and others may be rooted in quantity, and it also makes a useful place to nurse along any plants that need special attention and a closer atmosphere, such as newly pricked off seedlings or recently potted small stock that is hardly able to stand the air of the growing quarters. Referring again to the small ornamental plants, retailers who have their own greenhouses do not show this class of stock as much as they ought to. The price that can be obtained for it is not high, it is true, but it is quite a distinct side line and need not detract in any way from other sales. Then there are numberless little vases, jars and other receptacles that, filled with this class of plant, retail at a fine profit, while the plants, after doing a turn in the store, may be cut up again for stock if not sold.

Dracenas.

Before the propagating season is over see that there is a good stock of dracænas. Well ripened shoots may be cut into lengths and laid in sand just deep enough to cover them, a little rough moss being placed over the surface to retain the moisture. Where there is a doubt about the stems having been well ripened before being cut, it is good practice to lay these in entire and not to cut them up. We recently saw a batch treated this way, and while the number of shoots starting may not have been quite so great as from a first-rate batch from well-ripened stems, yet there were quite a large number, and the propagator in this instance had used this method in preference to cutting up the stems, as he was afraid of losing them all by damping. The joints that were placed in sand some time ago will now probably be ready for potting. They may go into 2½-inch pots and be stood fairly close for a time until they get over the change, the heads lightly sprayed over twice daily and a light shade put on when the sun is bright. Now that the Easter stock is out of the way the young dracænas in 3-inch pots

may be spread out, given a shift if necessary and grown on through the summer. They will make fine stock for fall use.

Lantanas.

The foliage of the smaller varieties of lantanas is singularly attractive to red spiders and white fly, and if these insects are allowed to get ahead they soon spread to salvias, heliotropes and other small stock that is frequently grown in the same house. There is often a lack of room in the plant houses at this time and such stock is very apt to be crowded on the benches. In these crowded parts the insects always get their first start, and from here spread to clean plants. This is another reason for our frequently repeated advice to plant growers not to propagate more stock than they can grow on to a finish or else dispose of as young plants. Just now a new stand and more room will be needed by this class of stock, and in moving them over watch the lantanas closely for any signs of these insects and clean them thoroughly should any be noticed. Cuttings still on the bench must be potted, and fall stock given a shift where needed. Keep the buds regularly pinched out until they are wanted in flower, allowing about four weeks for the flowers to open.

Geraniums for Winter Flowering.

The value of the zonal geranium as a winter-flowering plant is not sufficiently recognized. There are many subjects more difficult of culture, more expensive and less attractive that are grown much more than they are, and we would like to see them more popular. The present or any time within the next two months is a good time for propagating. Cuttings should be taken of good top shoots where possible, but almost any piece of geranium wood with a couple of eyes to it will strike and make a plant. Many of the bedding varieties, such as S. A. Nutt, Poitevine, Jean Viaud and a number of others, are just as suitable for winter flowering as for bedding; any variety, in fact, of good dwarf habit, free flowering and of bright color. The latter is an especially good form and will doubtless increase in popularity. Then there is the old Rasfail and its improved forms which produce remarkably long-lasting and showy flowers. The round-flowered single forms that are such favorites in England are very fine in appearance, but the semi-double and double forms of the Bruanti section are far better for growing as plants, the habit in most cases being better, the foliage finer and the plants better for shipping, as they do not drop like the single forms. Plenty of light and plenty of air all through the growing season and sufficient pot room to prevent anything approaching starvation are the principal needs of pot geraniums, and the plants must be kept pinched and the flower buds picked out until about six weeks before they are needed in flower.

BOSTON, MASS.—A Leuthy & Co. sold out everything they had at the recent Easter at prices about the same as those of last season. There was enough stock to go around but the old story of growers holding back stock was repeated.

THE RETAIL TRADE

WE note that the ladies' hat proposition is being described as an exclusive novelty by some magazines.

BLOOMINGDALE BROS.' roof garden at Third and Lexington avenues, New York, was a magnificent sight during the Easter trade rush. Under the 30,000 square feet of glass were banked azaleas, heather, rhododendrons, genistas, rambler roses and all the popular Easter plants making a scene of great beauty.

Floral Muff.

The floral muff herewith illustrated was the work of W. L. Hundertmark, manager for the McAllister Co., Passaic, N. J., for a recent wedding. Yellow gauze ribbon was used with the one composed of yellow daisies, white satin with that of lily of the valley and the effect in both cases was excellent. In connection with the wedding the company carried out all the decorations at the church and home, which were very elaborate.

Floral Muff.

Wreath of Sweet Peas and Cattleyas.

SEE SUPPLEMENT WITH THIS ISSUE.

Beautiful wreaths may be made by the use of sweet peas alone but, unless they are very skillfully arranged, there is apt to be a flatness to the finished wreath that is not exactly pleasing and here is where the addition of some larger flowers is advisable. Cattleyas are especially suitable; their soft neutral tints blend finely with those of sweet peas, or indeed almost any other flower, while the graceful contour of the blossoms is the very reverse of stiff and corrects any tendency to stiffness in the other flowers. When they can be obtained, the feathery flowers of Gypsophila paniculata are one of the most beautiful additions to a bunch or wreath of sweet peas. It gives an airy lightness to them that is impossible to obtain in any other way though when this flower cannot be had Asparagus Sprengeri pulled to pieces and stemmed may be introduced with good effect. Some of the sweet pea vine and tendrils may also be used with good effect, when they can be obtained fresh, another instance of a flower looking best with its own foliage.

The coloring of the sweet pea makes it more difficult to select a suitable ribbon than is the case with some other flowers of a more purely self color. But, on the other hand, if a good selection is made there is a chance of getting most beautiful combinations or gradations of color through the pinks and rose tints, mauve and pure white. See to it that the colors do not clash and detract one from the other, this needing more care, perhaps, in the mauve and blue shades than in the pinks. In making up this class of wreath it will be found an advantage to work a little moss between the stems of the flowers to keep them apart and prevent bunching, the sprays of Asparagus Sprengeri also helping in this way. The cattleyas should be so arranged that the flowers look straight out of the wreath and are not crowded, each one showing its characteristic shape and exhibiting the fine color of the lip to advantage. Thus treated these orchids are among the finest flowers extant but crowded in a bunch with the sepals pressed inwards they lose all individuality.

Easter Plants in the New York Stores.

The week preceding Easter opened with unseasonably warm weather and there were grave fears for much of the plant stock. Fortunately, the weather turned cold on Wednesday and though high winds caused some discomfort and inconvenience it was an improvement over earlier conditions. An immense stock of plants was in evidence throughout the week. As previously outlined in these columns, there was no surplus of pot lilies. Though there were many lilies, strictly first class stock was an exception. What was offered sold well, which goes to prove a leading retailer's claim that "the people are as fond of lilies as they ever were if they can get good ones."

Judged by the calendar this was not a late Easter, but seldom has stock been so far advanced. This was particularly noticeable in the pink roses, Dorothy Perkins, Lady Gay, Hiawatha, Newport Fairy and others. Much of the stock of these roses, of which there was an immense quantity, was so far advanced as to be off color, and consequently unsatisfactory. While the azaleas as a rule were nearly wide open, there were many fine specimens to be seen and they did not suffer like the roses. In popularity, the oft repeated saying that a good azalea will sell if anything will, was again verified. There were many fine specimens of rhododendron but they too suffered from the open season.

The hydrangeas, in blue, pink and white, seemed all that could be desired in point of bloom, but did not seem to sell as well as other stocks. "They are trouble makers," said a dealer, "because most of the people neglect to water them." It seemed, however, that more small or medium sized plants would have been very desirable. Many fine plants of bougainvillea were noted. In the show

EASTER PLANTS IN STORE OF ALEX McCONNELL, NEW YORK.
New Unnamed Rambler Rose on Right.

windows of several retail stores, standard plants of this variety were exhibited with fine effect. There was also a good stock of small bush plants in 5 to 7-inch pots, which sold well. The marguerites played an important part in the plant trade; their popularity does not seem to wane. There were many splendid specimens to be seen, grown in 12 to 14-inch pots to standards and covered with blooms. From these sizes there was a grading down to small plants that wholesaled for $4 per dozen. Some of the large sizes brought $5 and $6 each.

The stock of ericas was not large, but it showed its worth, particularly in basket combinations. It may be said in passing, that though we have heard more or less of the Crimson Rambler rose being displaced by newer varieties, it has shown decidedly to advantage, in keeping qualities, over the others this year. Pans of lily of the valley and hyacinths, the latter singly and grouped, were frequently seen and seemed popular. There was a very great stock of good geraniums on the market; they, as well as many other plants, being frequently seen in the wagons of street vendors. On April 9 a dealer of long experience in this city remarked: "I have never seen so many plants on the streets of this city as I saw yesterday." With a great amount of stock in the last stage of bloom it was simply a case of getting something out of it. The annual Saturday before Easter plant sale on Union square brought out large numbers of both sellers and buyers. Though much of the stock was far advanced, there were many really good specimens of rambler roses, azaleas and hydrangeas. A great amount of stock was sold, prices dropping as the day advanced. By night a very fair rambler rose or azalea could be bought for $1 to $1.50. In the leading retail stores many handsome basket combinations of plants were noted and many of them were sold at prices ranging from $20 to $30. The rambler roses were much used in basket combinations. For this purpose, trellised baskets were used for large plants, the combinations being completed with small azaleas, ericas or such other plants as pleased the fancy of the designer.

Easter Cut Flower Trade at New York.

Viewed as a whole and taking into consideration the condition of other lines of business, the trade in cut flowers was very satisfactory. John I. Raynor, one of the oldest and most reliable members of the wholesale craft, voiced the general sentiment when he said: "The days of very high prices have passed. There are now so many growers and so much stock is being sent to this market that it is unreasonable to expect extraordinary prices at this season." A large amount of stock was sold in this market for more than its actual worth, and nobody realizes this more than the wholesalers themselves. We are now dealing with the present. It is a mistake and a great and inexcusable blunder for growers to "salt" or hold back stock for Easter. Within a few days preceding Easter, we noticed many carnations and violets, that, to drop into the vernacular of the street, were "rotten." Roses were not at all plentiful, but prices could not be forced up much above the normal. the best average price for special American Beauty roses was 50 cents each; a few probably sold for 60 cents but they were the exception. Killarney went better than Bride and Bridesmaid, specials bringing 15 cents, extra good stock going as high as 20 cents. While a few Bride and Bridesmaid may have brought 15 cents the bulk of the stock went at from 8 to 12 cents. There came very near being a surplus of carnations and many sold for three cents, five cents being top figures; excepting the Ward and John Young novelties which, we believe, sold for as much as six cents. There were no good cut lilies on the market. We saw cut lilies sold for 12 and 15 cents, that in former years would scarcely have been taken as a gift.

On Easter morning lily of the valley was an impossibility; it could not be

bought. Six cents was offered, but it might as well have been 25 cents, for it was not to be had. In this one stock the wholesalers made a mistake. They started it at $2.50 and $3 per 100 when they might have had $5 and $6. But we all have hindsight, foresight being what counts at Easter. On the afternoon of April 9, thousands of violets sold for 25 cents per 100. It was hoped that a reaction would set in on Saturday but the influx of little short of 1,000 boxes on that day prevented this. The hot weather of Monday and Tuesday was very unfavorable to violets, but the situation was inexcusable. On Easter morning we saw violets, the odor of which was but little more pleasing than that of a compost heap.

Orchids went very well at from 60 cents to $1 each for cattleyas, other varieties in proportion. There was no very unusual movement in gardenias, good blooms selling for $5 per dozen which is little more than the normal price. Good sweet peas sold readily at from $2 to $2.50 per dozen bunches, and as a whole this stock exceeded expectations. It is unnecessary to go into detail respecting a number of the minor stocks, possibly excepting Ulrich Brunner and General Jacqueminot roses, which, while not in great abundance sold readily; special Brunners bringing 40 cents each, wholesale, and Jacqueminots 15 cents. Stocks, both double and single, narcissi, tulips and other bulb stocks were in good suply, but the prices realized were little above the figures of ordinary trade.

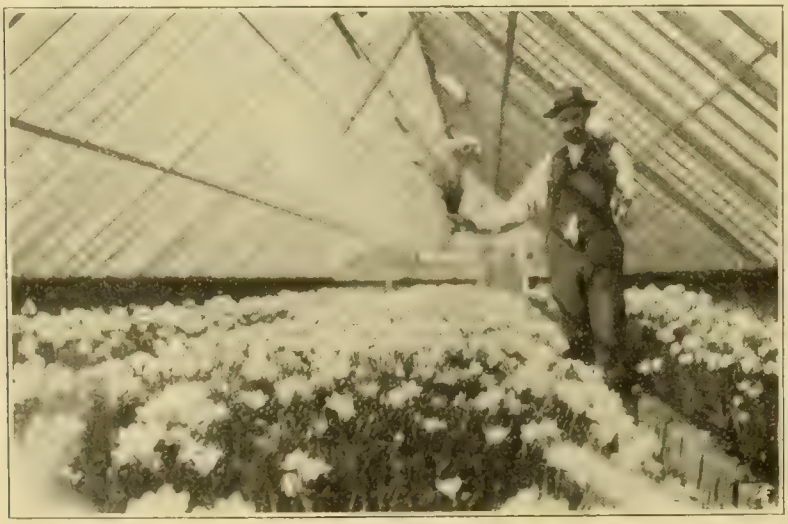
FREESIA PURITY.

Growing in the Field with Rudolph Fischer, San Gabriel, Calif.

A Pretty Evansville Wedding.

The wedding of Miss Margaret Grant Gray, only daughter of the late Senator and Mrs. James Gray, to Robt. Flint of Los Angeles, Calif., on April 6, was one of the most elaborately decorated ever seen in Evansville, Ind., the bride's home town. Julius Niednagel had the decorations which transformed the palatial home of the Grays into a veritable garden of flowers with floral decked arbors running the entire length and breadth of the large reception room. Stately palms and garlands of southern smilax were used to outline the room, the mantel decorations being of Bride roses.

Ivory roses graced the drawing room in which the ceremony took place and vases of Easter lilies on pedestals on either side the altar gave a seasonable touch. A pretty feature was the large rose ball over the foot of the stairway. Here, as she left the lower step, the bride met the groom and the great rose, bursting into bloom showered rose leaves on both, literally a roseate promise of future happiness. The bride's dress was embroidered with roses and lily of the valley, a tulle veil being caught with an orange blossom coronet from which the flowers drooped gracefully to her shoulder. Her bouquet was a shower of lily of the valley. The dining room was also very beautifully treated, Killarney roses being the principal flowers used.



FREESIA PURITY.

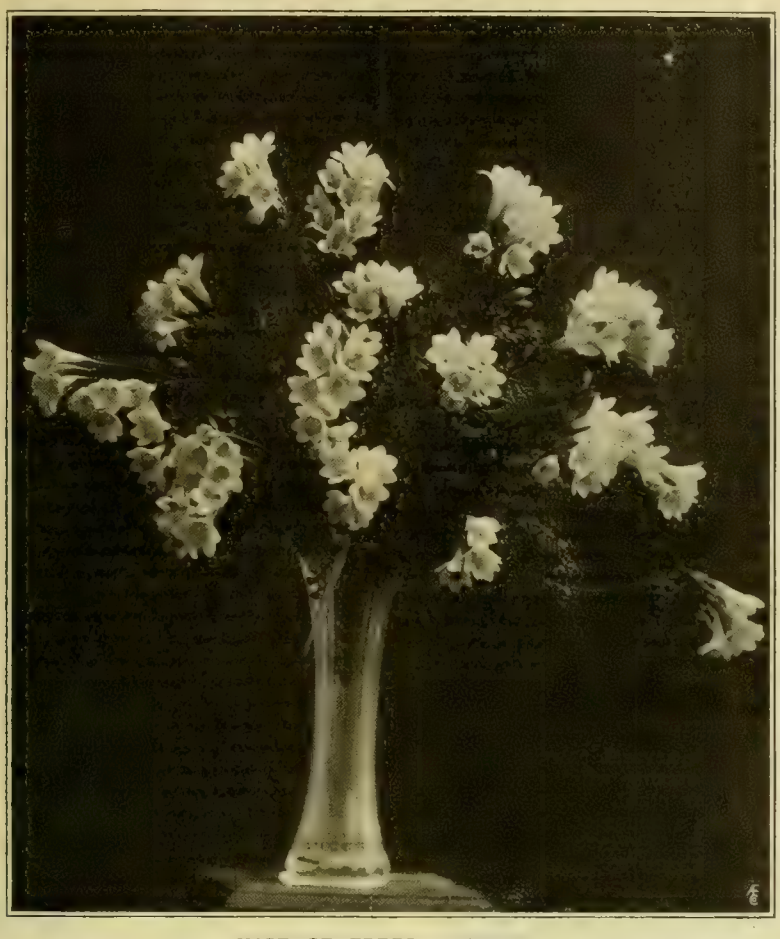
In the Greenhouse at R. Fischer's, San Gabriel, Calif.

Choice Funeral Work.

After a very satisfactory Easter trade, Mrs. M. D. Reimers, of Louisville, Ky., was called upon to furnish some very choice emblems for the funeral of Ernest Ball, of Versailles, Ky., who frequently exhibited fine horses from the stables of Ball Bros. at the Kentucky horse shows. One piece consisted of a large horseshoe, made entirely of large California violets and edged with mignonette. It required 3,000 violets to make the piece. A handsome spray of six dozen long stemmed American Beauty roses was placed on a pall of Asparagus plumosus and adiantum. A beautiful basket of Harrisi lilies was placed at the foot of the grave. The three pieces made a beautiful grave decoration.

CLEVELAND, O.—The J. M. Gasser Co. reports a 10 per cent increase in sales with better prices on plants and plenty of stock in all lines except violets. Rambler roses, lilies and azaleas were the best sellers in plants, violets, sweet peas and roses in cut flowers. Bulb stock and spireas met with little favor.

DENVER, COLO.—The Park Floral Co. reports a 20 per cent increase in sales at prices the same as those of a year ago. More lilies and Lady Gay roses could have been sold in plants, also violets, but there was plenty of everything else. Pot azaleas and bulb stock in pots and cut were slow sellers.



VASE OF FREESIA PURITY.

Freesias of Pedigree.

The illustrations herewith show Freesia Purity as grown by Rudolph Fischer, San Gabriel, Calif., in field, greenhouse and lath house, with a vase of the cut flowers as used for decorative purposes. Mr. Fischer has a large stock of this fine freesia and says there is a great demand for seed, which, of course, cannot be supplied, as Purity or any other freesia does not come true from seed. The high price of stock of this fine variety is evidently a great temptation to unscrupulous growers to increase their stock by seed, thereby making it practically impossible in a few years to secure pure stock. It is too bad that such a condition should exist after all the work and care bestowed on this variety to bring it to its present state of perfection.

PORTLAND, ORE.—Clarke Bros. report a 20 per cent increase in sales at Easter at prices the same as last year. Easter lilies were the only short item. Bulb stock had only a poor demand.

HALIFAX, N. S.—Sales at Easter were greater this year than last with F. W. Killam at similar prices. There was a sufficiency of plants but not enough roses, violets or carnations. Trade in general is good.

LAWRENCE, KANS.—Sales and prices with C. M. & E. S. Luther at Easter were almost the same as those of last year. More plants and cut roses could have been sold. Lilies were in great demand in plants and roses, lilies and carnations in cut flowers.

THE ROSE.

Roses.

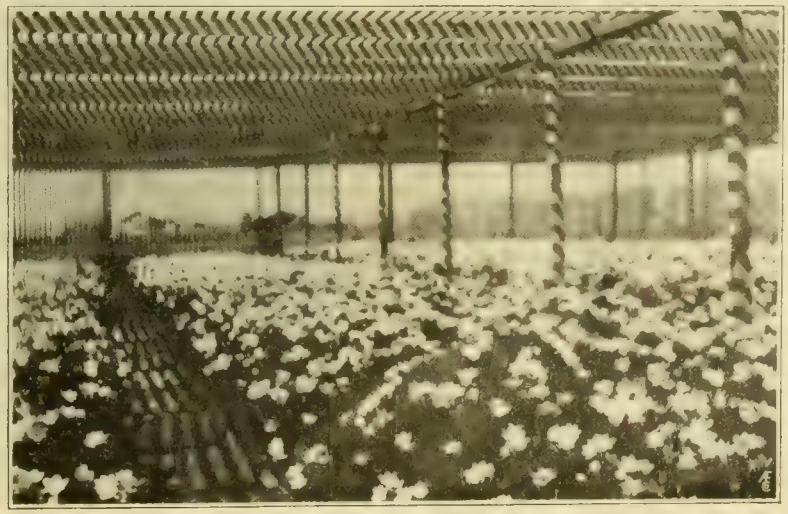
A paper read by L. Reuter, Westerly, R. I., before the Gardeners' and Florists' Club of Boston, April 20.

It has been somewhat of a puzzle to me to know what line to take in talking on roses at this meeting. Although I sometimes find myself talking as though I really had very definite ideas on methods of growing roses I generally get back again to the point where I think that I am only a student and that what seems to be a settled fact today is surrounded by questions tomorrow. The subject "Roses" is broad enough, in a way, but when I come down here to your shows I am struck with the idea that the growers for this market know quite a lot about roses. It would be much easier for me to show what I don't know than it would what I think I know. Consequently I shall not try to say anything regarding culture in general. The Boston growers know some things about growing almost any crop. Anyone who is not aware of that had better come here to some of the shows. He will see exhibits of all kinds and will find that within a not very great distance from Boston there are located men who can hold their heads up with the best in all lines, so I have decided to say a few words in the way of comparing the results from a few of our standard varieties.

CONSIDERATION OF VARIETIES.

Of course, we must consider Bride and Bridesmaid first, and my first impulse was to escape the bother of following out a maze of figures and say that these two varieties were alike in productiveness, but I met a surprise there. Whether this is only a local condition or not I am not prepared to say, but I found Bridesmaid to produce the better. It has always been apparent to me that our stock of this variety was a little more thrifty, better able to resist mildew, etc., and I was a little bit reluctant to pass by the opportunity while I was poring over our records of satisfying myself as to the productiveness of these two old standbys. I found that our plants have cut as high as 12 blooms more of Bridesmaid than of Bride for the year. This number represents the limit, but in every case Bride fell short. As to the average price on these two there is little to be said. They hold about the same in the long run. This leaves Bridesmaid with an advantage.

Next we come to Killarney. This variety takes kindly to our conditions and we are able to get good stems and good color; it is hardly as good a producer as Bridesmaid but there is one important point to be considered. We cut short and weak stemmed blooms of the latter while on Killarney we



FREESIA PURITY.
Growing in a Lath House at R. Fischer's San Gabriel, Calif.

cut nothing less than No. 1 grade. All shorter breaks are pinched and left for double joint stems. The market price also favors Killarney, and with the public inclining to it when a pink rose is wanted, we must place it at the head of the list. How long this condition will last is a question. Bridesmaid had been the only standby as a pink rose for quite a number of years and we are now glad of a change, but the buying public are not going to be satisfied with nothing but Killarney as a pink rose any more than they were with Bridesmaid. Of the new ones none seems more likely to succeed in taking a share of the honors than My Maryland. It will by no means crowd out Killarney, but it will find a place if it can be grown properly. (Regarding this I want to say a few words later.) Richmond does not take kindly to our soil. I can hardly think that other growers who cut such excellent blooms get as low returns per plant as we do. We cut good flowers but not enough of them and are trying to find a soil which will suit the variety better. Another year we may find different results, but our experience this far has not been very satisfactory.

Chatenay is a heavy producer, ranking close to Bridesmaid, and is really a surprise when the seasons' average is considered. In grading there is an advantage at once, a good percentage of blooms being No. 1 and better. There are two main reasons why this rose is not more generally grown. First it has a bud too light for warm weather. Until the cool nights come on it is impossible to cut blooms with sufficient body for them to be salable, and the same condition exists by the early part of June. The other reason is that the buying public seem to consider Chatenay only as a novelty. A limited quantity will find a good sale, but I don't think it would be wise to plant very heavily. Mrs. Jardine has not been a success with us, it being shy and also weak in color during the time when the sun is strong. A perfect bloom of this rose is really very handsome and such blooms as were offered in the Philadelphia market at Christmas would always find a ready sale at a good price. Rhea Reid has been a stubborn variety and we found it necessary to discard it early this spring because it was not paying and we needed the room. With the coming of White Killarney, Bride will have its first strong competitor and there seems little doubt that this grand new rose will be received with a hearty welcome. It seems to be the general opinion of the store men, who had a good chance to form an idea, that this variety will prove a strong favorite for some time at least. It surely will be as good a producer as Killarney and consequently should be more profitable than Bride.

MY MARYLAND.

Now for a few more words concerning My Maryland: There has been a great deal said about this variety lately and several articles in the trade papers which have spoken well for the rose have kept well within the bounds of truth. There is no good reason for doubting the great value of My Maryland as a forcing rose, and not only is it good in winter, but it is especially good in the summer. The blooms have good substance, enough petals, and these hold their color so well that it will surely be appreciated during July and August. It is not susceptible to mildew or black spot and, as a producer, I believe that the best we now have will be pushed to hold first place. No doubt it has been inclined in some places towards resting this winter, but is that surprising? We didn't know the rose and its requirements and practically every one who grew it took every eye that could be used for grafting or cuttings, robbing the plants so much that it is not at all strange that the cuts were not heavy in some cases. It is a fact, however, that it has been made to produce very well by quite a few growers this year even through the most trying part of the season, and I will venture to say that next year will tell us a different story. We don't know yet how good it can be grown and it is very probable that we have heard the worst and only a small part of the good. I will try to give an idea as to what some of the varieties I have mentioned may be expected to cut. I have never gathered any definite ideas as to what other growers can get from their plants, but the following statements will give some faint idea at least as to what a plant may do.

PRODUCTION OF VARIOUS KINDS.

There are several things to be considered in stating what a lot of roses will cut per plant. Where the cut is given from a house of first year stock we must consider when the stock was housed, whether it was in the spring or in June or July. If we are speaking of carried over stock we must consider how the plants have been handled. We have cut from one house, to date, 20 months without a break. The plants were not rested last summer and are still doing well. In this case a count may be taken for a full 12 months. Where we rest a house each summer and carry it over two or more years, it is possible to count on 10 months' flowering. This is an advantage which carried over plants have over young stock planted each year, but when the stock passes the third year they seem to gradually cut less; two and three years at the most seems to be the limit for growing our forcing roses. From a house of Bridesmaid which cut 10 months in the second year we took 53 flowers per plant. This same house is cutting well now in its third year and had no rest last summer, but it will not equal that cut this year. The best cutting we have done for 10 months on Bride was 40 blooms per plant and Killarney 40 to 38, but the Killarney had hardly the full 10 months to its credit. Chatenay has cut for us 42 blooms for eight and one-half months; during that time the buds were of good quality, but to have run them longer into the summer would have been of little consequence. I cannot give an average cut from Richmond, as we have never handled it in a way that will permit comparison with our other sorts.

These records which I have mentioned do not mean that these are given because they are the best cuts I could find, but are simply a statement of last year. A house of roses may no doubt be made to produce better than these and it is also true that we may expect to fall below these figures at any time. All I have in mind is to give a general idea of the matter. When forming conclusions as to the relative values of these varieties mentioned, it is necessary that the subject be considered from all sides. While there is a difference in the productiveness of several varieties there are also facts to be taken into consideration before deciding which is the most prof-

ROSE WHITE KILLARNEY.

itable. While Killarney will not produce as heavily as Bridesmaid the higher percentage of No. 1 grade and better, with no No. 3 at all, which are cut from Killarney, gives this sort the advantage at once. And so it is with all the varieties. To make sure which are the best paying ones a record must be kept of the cuts, prices and grade of blooms. In conclusion I would say that I believe Killarney ranks first, Bridesmaid and Bride next in order named, with a possibility that Richmond may come in close to Bridesmaid.

CHRYSANTHEMUMS

Selecting Chrysanthemum Shoots.

ED. AMERICAN FLORIST:—

Last year the AMERICAN FLORIST contained the following statement: "After stopping chrysanthemums or after the June bud do not take the first shoot; pinch this out and take the next." Does this mean after the top has been pinched the first shoot is removed and the next allowed to remain? E. W.

Yes. The first shoot from the June bud or other natural break is often weaker than the next below while in the case of shoots following pinching the upper one is sometimes damaged in the operation. Hence the advice given.

Chrysanthemums.

A paper read by Elmer D. Smith, Adrian, Mich., before the Detroit Florists' Club, April 19.

Some time ago your secretary requested me to supply a paper on "Chrysanthemums," and, as this is a rather broad subject, I will only touch upon the most important phases. In the beginning let us consider the plant itself: It is a perennial, which, you are aware, means a period of active growth, terminating in the development of flowers, which is followed by a season of inactivity or rest. The most hardy are those whose antecedents originally came from northern China and represent the pompons or small flowering section. Those which are usually displayed and sold in flower shops are either the progeny of natives of Japan or those in which these two classes have been interbred. Those who are propagating for their own use only will have stronger stock if they adopt nature's way by giving the old plants partial rest; exciting them into active growth with heat weakens their vitality. Stock plants kept in the light and at a low temperature until the cuttings are needed will furnish the best material for the purpose. When the time arrives for propagation do not hasten roots from the cuttings by strong bottom heat. It is true perennials under glass will grow faster than when under more natural conditions, but ample ventilation will do much to produce a moderate and healthy growth.

PLANTING.

Strong plants and rich soil are important in the beginning, and with these two things provided at planting time, the results will surely be gratifying, if the watering, airing, tying, fumigating, feeding and disbudding are given prompt attention. Early varieties require early planting to secure strong plants by the time the early buds appear. The end of May or beginning of June should see such stock benched, the midseason sorts by June 25, while this work for the late kinds may be deferred until July 15. "How far apart should they be planted?" is a question often asked. Each grower must decide this for himself, for he knows best the grade of bloom which meets his requirements or can be disposed of at a profit. Within certain limits the greater the distance between plants the stronger the growth, the heavier the stem and larger the blooms. Eight or nine inches apart each way is a good distance and will produce high grade commercial blooms, while for fine exhibition stock 10 to 12 inches, according to the varieties being treated, is considered none too much. Varieties with small leaves, like Ivory, may be planted closer than some of the stronger kinds. Nicely finished blooms from four to five inches in diameter may be had by planting six inches each way, but the stem is usually weaker than when greater space is allowed. Occasionally some one asks how many plants will be required for a bench of a certain size. The following tables may be of some service. Multiply the square feet of bench surface by four when planting six inches each way, by 2.25 at 8 inches and 1.78 at nine inches apart.

ROSE BRIDESMAID.

DISBUDDING.

"How many blooms to the plant?" This, like the preceding question, is at the discretion of the grower. The greater the number the smaller the size. Two plants of the short jointed kinds, particularly those with small leaves, are often planted together, which gives longer stems than when set singly and then stopped to secure two or more blooms. Let the appearance of the foliage be the index in watering. So long as it is of good color there need be no anxiety, but should it become yellow it is evident there is an over abundance, due either to lack of drainage or too frequent application. Doubtless you are all familiar with the methods and realize the advantages of keeping the plants securely tied, and the same may be said of weeding, fumigating and removing the stools which spring up as the plants come into active growth. So let us pass on to more important features. This will bring us up to the time when disbudding will need attention.

This operation is very simple but it is imprudent to defer the work. That excellent motto "Do it now" should be tacked up in a conspicuous place

before the buds appear. In the beginning it was suggested to plant early for early blooms, and if the selection has been judicious there are some kinds which will show buds in July. Those forming at this early date are termed crowns and may be saved on Golden Glow as early as July provided extra early blooms are desired. Probably the best way to manage this variety is to plant from the first batch of cuttings about May 15 and then follow with subsequent batches as fast as ready up to June 20, securing the first bud that appears. This should give a succession of blooms from August 15 to October 25. Monrovia is also best from early buds, about July 20 to 25, October Frost and Beatrice May August 10, Early Snow, Polly Rose, Glory of Pacific and Pacific Supreme August 15 and later. All of the so-called early buds should be selected by August 20, or your competitor will have his crop cut before yours is ready. The best period for selecting buds of the mid-season sorts are the 10 days following August 25. In the late varieties from September 15 and onward for a month, according to date of planting and the kind under consideration.

FEEDING.

As the buds begin to swell the necessity of feeding will confront us. The commercial grower has little or no cause for over feeding while, on the other hand, those whose whole object is size, must reach their aim by applying to the limit. The limit is often difficult to discern, particularly when new sorts are being treated, and so it is some blooms are injured rather than improved by this unnatural procedure. What and when to apply requires some consideration. Experience has taught us that manures and chemicals are conducive to strong growth and large blooms, hence we resort to their use to bring about this end. Those who have not had experience with chemicals must be content with light applications or leave them alone entirely. All the failures attributed to this source are without doubt due to too strong or frequent applications. Some will question the truth in the assertion that nitrate of soda, nitrate of potash or sulphate of ammonium should not be given stronger than one ounce to 10 gallons of water. It has been recommended by some at the rate of one pound to a 50-gallon barrel, which is approximately one ounce to three gallons. I have used these proportions at long intervals without apparent injury, but if the applications are to be repeated every few days there is danger of doing great harm. Where soda and ammonia are used exclusively the growth is rampant and inclined to be soft. Potash seems to govern or control this undue vigor by increasing the metabolical or harder woody tissues. Soluble phosphoric acid (which is present in varying quantities in all manures and some of the chemicals) acts more directly upon the flower, increasing the number of petals, which gives the bloom greater depth, to the joy of the exhibition grower.

Hen, duck and dove manures are rich in phosphoric acid and vary from 14 to 17 per cent. If any of these are used in the liquid form it should be very weak. Bone black gives about 16 per cent, ground bone 5 per cent. Potash is present in all manures and is also supplied by nitrate of potash and wood ashes, the former supplying 40 per cent as well as 12 per cent nitrogen and the latter 8 per cent of potash. Nitrogen is common in all manures, but is more abundant in the urine, and the same may be said of potash, so the

The Late Lewis J. Risser.

Courtesy of the Canner Publishing Co.

real amount contained in the material at hand depends largely upon the loss from drainage and other causes. The cheapest form in the chemical salts is nitrate of soda, containing 16 per cent. Of these three constituents, nitrogen is the least staple, being easily removed by the continued application of water, hence it is required in larger quantities than the other two elements. The foregoing data is really of little consequence, further than showing the ma-

The Late Francis Calvert.

terials which contain them and the comparative strength. No fixed rule can be given for their application, as all depends upon the condition of the stock to be treated. Plants growing in very rich soil or those receiving a heavy topdressing will require less than where the conditions are not so favorable. Feeding is one of the features which is shrouded with mystery for the reason we have no knowledge of the functions performed by the assimilation of these foods except as they appear in the growth and texture of the leaves. The mystery of this problem depends on the grower's ability to grasp the meaning of these varied conditions presented at this final stage of development and decide whether to continue or desist. The foregoing principally refers to the commercial branch of chrysanthemum culture.

POMPONS AND SINGLES.

Before concluding this part of the subject I wish to impress upon you the adaptability of the pompons and singles to your use. Both of these sections lend grace and beauty to floral decorations of all kinds and to a degree that cannot be attained where the large flowers are exclusively used. They also make beautiful pot plants, either large or small, and, being of the easiest culture, are sure to find favor both with the grower and those who appreciate flowers from an artistic standpoint. Exhibition blooms are produced by practically the same methods. Varieties are selected for this purpose which produce the largest blooms, as size is considered the chief feature. Early propagation and planting are essential to this end. Rich soil and liberal feeding are also of equal importance. You are all aware that achievements in floriculture are not the result of any one thing we do, but the many things which receive prompt attention from time to time. It is equally true that it is not so much the superior knowledge, but the ability and energy to put this knowledge into practical use which gives one the advantage over another. Those of you who have been successful with carnations know full well that the promptness with which you have looked to every detail marks the degree of your success, and so it is with the chrysanthemums. A small amount of knowledge and a large amount of energy well applied will be better than these conditions reversed.

Callas Unsatisfactory.

ED. AMERICAN FLORIST:—

We are sending a plant of calla that for some reason is decaying. The plants were started last year and kept in a temperature of 60° at night; then, on account of the decay, they were moved to a house kept at 45° at night, but the decay kept up just the same. Please let us know the cause. The soil contained one part cow manure and three parts sod and the plants have been fed with sheep manure. The plants were the best we could buy and were treated as recommended in the AMERICAN FLORIST last fall.

S. BROS.

There is very little the matter with the callas. The soil in which the plants are growing could not be better and the mass of roots is prefectly healthy. But the appearance of the growth suggests that they have been rather over fed. Possibly had the atmosphere been kept a little drier at the time the decay started it would have ceased. It was not good practice to introduce the plants suddenly to a temperature so much lower. This could serve no good purpose respecting the decay and forms a check to growth.

As the season is so nearly over for these plants they may be kept growing until finished and then dried off. Another season we would suggest a little less feeding and a temperature of about 50° at night, increasing this a little should the flowers be needed early. G.

Berlin International Exhibition.

The great horticultural event of the year so far was the international exhibition of the Prussian Horticultural Society, held in Berlin, April 2-13, inclusive. Two large new buildings in the Zoological gardens were given over to this event, which was graced by the presence of the kaiser and the kaiserin.

Probably about two-thirds of the exhibits, according to the London Gardeners' Chronicle, were contributed by German exhibitors, and one-third by those of other nationalities. Altogether there were 420 exhibitors. Belgium contributed most of the fine foliage plants, including the excellent group from the Van Houtte Nurseries at Ghent. The Dutch Bulb Growers' Society produced a striking color effect with their hyacinths and tulips, and Holland also exhibited a considerable quantity of vegetables and salads, which were in every respect creditable. From France there were choice orchids from Lambeau, hybrid gerberas from Adnet, cinerarias from Vilmorin-Andrieux & Co., and various growers sent cut carnations, collections of fruit, vegetables and salads, which latter exhibits were amongst the best in the show. We may draw special attention to the hybrid gerberas. Flowers of some of the earlier hybrids have been seen at the Temple shows in London, but we have never seen such a presentment of their infinite variety and beauty as that shown by Adnet. England was represented by but few exhibits, of which the chief were orchids from Charlesworth & Co., carnations from C. Engelmann and G. Lange, and pelargoniums from H. Cannell & Sons.

Indian azaleas were well shown by T. J. Seidel, of Dresden, who was the principal exhibitor of these plants. The uncongenial weather of the present spring, however, has been much against these and other plants that in more favorable circumstances would have appeared to better advantage. Englishmen were impressed with the excellence both of the cyclamens and of Primula obconica. We have never seen such fine displays of Primula obconica as those at Berlin. The development of this plant has been of an extraordinary character; in the varieties exhibited the colors ranged from white through mauve, pink and red to the deepest crimson, whilst in some varieties the flowers measured as much as two inches across. Cyclamen cultivation is evidently well understood in Germany, the groups of these plants in the exhibition being remarkable for their unusually large and finely colored flowers produced in the greatest profusion.

Like most of the continental shows, the Berlin show was remarkable for the good taste evinced in the arrangement of the exhibits. In this respect, though not in the excellence of the individual classes, the Berlin show was superior to the exhibitions to which they are accustomed in England. In Berlin each several exhibit contributed to the general harmony. There was but little need for stages, since most of the plants were bedded out in natural groups. The pots for the most part were hidden, there were no obstructive labels, and any architectural features in the building that were considered inelegant were either draped with pleasing colors or covered with branches of spruce.

The countries represented on the board of jurors were France, Belgium, Holland, Sweden, Russia, Denmark, Italy and England. The exhibition covered an area of 2½ acres and the rental of the buildings was approximately $12,000; premiums, $16,800.

OBITUARY.

John Scott.

John Scott, the well known grower of Flatbush, Brooklyn, N. Y., ex-president of the New York Florists' Club, whose name is familiar to every florist in the country as the disseminator of Nephrolepis Scotti, was shot dead by Aloysius Gross, a discharged fireman, at his greenhouse establishment April 19, at 6 p. m. The man had been discharged by Mr. Scott's foreman. He went away and secured a weapon, returned and opened fire on Mr. Scott who was standing talking to his foreman at the time, the revolver, it is said, being directly aimed at Mr. Scott.

The Late John Scott.

Words cannot express the feeling of horror and regret, as a result of this fiendish deed, that is felt in the trade throughout New York and nearby towns, in which Mr. Scott was well known personally. To his aged parents, mourning wife and children and several brothers and sisters who also survive, the heart of the community goes out in deepest sorrow.

Mr. Scott was born at Newlandrig, near Dalkeith, Midlothian, Scotland, January 23, 1868, and served his apprenticeship at New Battle Abbey under Wm. Priest, a well known successful gardener. After a short time with a local nursery firm he went back to Mr. Priest, who now has charge of the gardens at Eglinton Castle, Ayrshire. He also served some time at the famous Bredalbane place, Taymouth Castle, and other Scottish places, and he came to this country in 1889. He filled several private places here and, after a visit to his old home, he accepted a position with the late Frederick Scholes of Keap street, Brooklyn. This place shortly after was turned into a commercial establishment and Mr. Scott succeeded to it. For some time he kept this on and also built new glass at Flatbush. A year or two ago the old Scholes establishment was broken up and the business removed wholly to Flatbush.

Mr. Scott is perhaps best known to the trade as the originator of Nephrolepis Scotti, a fern which has become very widely known and much grown, a staple variety, in fact, among the many of this class. He always grew a large stock of fine decorative and flowering plants and was a propagator and grower of very marked ability. He was president of the New York Florists' Club in 1905 and had then been a member for about 10 years.

The funeral will be held April 23 and members of Masonic Lodge Clan MacDonald and the New York Florists' Club will attend.

Lewis J. Risser.

Lewis J. Risser, proprietor of the Mosbaek Greenhouse Co., of Onarga, Ill., died in New York on the afternoon of April 13. Mr. Risser was born September 19, 1848, at Ashland, O. He went with his father's family to Onarga, Ill., about the year 1863. For 40 years he was engaged with his father, Peter Risser, in a general mercantile and grain business at that place. In 1892 he started in the corn canning business, for which he grew his own corn, having a farm of 3,000 acres planted to this crop. In 1904 he became interested in the greenhouse industry, and erected eight 100-foot houses for the growing of bedding stock, ferns, etc. This branch of the business is at present in charge of Chas. W. Reimers, but took its name from Ludwig Mosbaek, the former manager. At the time of his death Mr. Risser was president of the Western Packers' Canned Goods Association.

Mr. Risser was taken sick late in March, the trouble being diagnosed as ptomaine poisoning, which he thought came from eating some cold storage fish. It is believed that the attack of heart failure was brought on by the weakened condition in which this illness left him. On the day before his death he came to Chicago and late that afternoon left for New York. While walking at Franklin street and West Broadway at 1:30 o'clock he became ill and was removed to the Hudson street hospital, where he died a few minutes later. His body was taken back to Onarga, where he was buried. He is survived by his widow and one daughter. The business of the greenhouse department will be continued as before with Mrs. Risser, Anabelle Risser and John Bessier as sole proprietors and under the management of Chas. W. Reimers, formerly of Louisville, Ky., who has had charge for some time past.

Francis Calvert.

Francis Calvert, of Lake Forest, Ill., died April 14 at the ripe age of 79 years. Mr. Calvert was born at Eccelfechan, Dumfriesshire, Scotland, February 14, 1830, and came to America July 4, 1854. He spent two years in Tarrytown, N. Y., under John Wallace, on what is now the W. D. Rockafellow estate, and came to Chicago in 1856. He was married to Jane Wallace, who survives him, September 10, 1857. Mr. Calvert was in charge of the S. H. Kerfoot Lake View estate until March, 1859, when he removed to Lake Forest. Here he laid out the H. M. Thompson and D. R. Holt places and later he laid out the C. D. Bradley, John V. Farwell, C. B. Farwell and W. H. Smith places. He built his first commercial greenhouse in 1875. The present firm of F. Calvert & Son, consisting of the late Mr. Calvert and his son Edgar S. Calvert, was established in 1884. This firm was, we believe, the pioneer firm shipping to the Chicago wholesale market. The business will be continued by E. S. Calvert under the same style and along the same lines as in the past. The funeral took place from the Lake Forest home April 16. Five children survive.

THE AMERICAN FLORIST

1885 TWENTY-FOURTH YEAR. 1909

Subscription, United States and Mexico, $1.00 a year; Canada $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from those in the trade.

When sending us change of address always send the old address at the same time.

Advertising rates on application.

From the first issue the AMERICAN FLORIST has accepted only trade advertisements.

Advertisements must reach us Tuesday (earlier if possible), as we go to press Wednesday.

We do not assume any responsibility for the opinions of correspondents.

ONE of our correspondents complains that his customers withhold many of their orders until Sunday morning and demand delivery on the shortest possible notice. Sunday work, happily for the store man, is on the decrease, but there seems to be no way out of it for the grower.

TWO very valuable papers appear in this issue, one on "Roses" by L. Reuter of Westerly, R. I., and the other on "Chrysanthemums" by Elmer D. Smith of Adrian, Mich. Both are growers of great practical experience and their papers contain carefully compiled data that should not only be read by cultivators but filed for future reference.

SOUTHERN CAPE JASMINES are unusually late this season.

OLD putty and paint may, it is said, be removed from glass that is to be used again by soaking the panes in a very strong solution of potash.

CHICAGO retailers report that individual plants sold better than baskets this Easter, a change, to some extent, from the experience of former years.

A CORRESPONDENT of the Garden says that Gruss an Teplitz can be raised from cuttings outdoors as freely almost as privets and that own-root plants are freer flowering than budded plants.

THE Bulletin of the New York Botanical Garden (Volume 5) is to hand, containing 150 pages of interesting matter referring to the garden and many contributions on various horticultural subjects.

ANNOUNCEMENT has been made that the New England states intend holding a joint show in Horticultural Hall, Boston, Mass., October 19-24, 1909. Wilfrid Wheeler, Concord, Mass., is secretary.

IN the issue of April 17, the first two cuts illustrating Elmer D. Smith's article on "Concrete Benches" were transposed, Fig. 1 representing the bottom sections, Fig. 2 the side. A glance at Fig. 3, page 587, will explain this.

CLEANING UP day has been fixed as May 1 in many cities of the United States and whenever our florist and nursery friends have an opportunity they should seek to aid such a movement in their home town or city.

Ladies' Society of American Florists.

Mrs. J. C. Vaughan, president of the Ladies' Society of American Florists, has appointed the following committees on resolutions: Mrs. Geo. Asmus, Mrs. E. F. Winterson and Mrs. P. J. Foley, upon the death of Mrs. P. J. Hauswirth, Chicago; Mrs. W. J. Vesey to appoint two associates to act with her upon the death of Mrs. D. E. Gorman, Williamsport, Pa.; Mrs. F. H. Traendly, Mrs. John Scott and Mrs. John V. Phillips, extending sympathy to E. V. Hallock's family. Will the above committees report to the secretary as soon as possible.

MRS. CHAS. H. MAYNARD, Sec'y.

New Trade Directory.

The seventeenth edition of the American Florist Company's "Directory of Florists, Nurserymen and Seedsmen of the United States and Canada" has just been issued, increased in size from 509 to 547 pages. With changes and additions there are approximately 800 new names and two new features appear for the first time, viz., a list of the leading florists, nurserymen and seedsmen in South America and a list of seed and bulb growers. The regular features revised to date include park superintendents, landscape gardeners, trade associations, leading cemeteries, horticultural societies, experiment stations, botanical gardens, postage rates, florists' clubs, foreign houses, catalogue firms, express rates, supply concerns, judging scales and statistics. The book is substantially bound and indispensable in every office connected with the trade in any way. The price is $3 per copy, postpaid.

Society of American Florists.

ADVISORY COMMITTEE.

President Valentine has appointed the remaining two members of the advisory committee for the Trade Exhibition at Cincinnati. The committee now stands: Albert McCullough (Chairman), R. Witterstaetter and E. G. Gillett.

W. N. RUDD, Sec'y.

April 16, 1909.

National Council of Horticulture.

The fifth installment of the press service of the National Council of Horticulture, contains articles on "How Not to Sow Seed," "How to Make a Lily Pond," "Cannas" and "House Ferns." The articles are, as usual, timely and practical and may be had free on application to James H. Burdett, 1720 W. One Hundred and Fourth place, Chicago.

Are Flowers A Necessity?

This question is frequently asked, apparently in all sincerity, by people who should know better and who ought to recognize the futility of it. While we would hardly go so far as to say flowers were as necessary as bread or raiment yet anyone who will take the trouble to look around him will see that, at the present day, they come very near to it. Literally, of course, without flowers we could not have either bread or raiment, there would be no wheat or other cereal for the former or flax or wool for the latter. But, in their decorative character, as distinct from their utility in manufactures, medicines and otherwise flowers are a necessity.

Look at their value for instance from an advertiser's point of view. Open the first newspaper or magazine that comes to hand and note how everyone uses flowers in some form or another. It may be only a flowered border or scroll, but more often the flowers will be a distinct feature of the advertisement. It doesn't matter what the advertiser wishes to sell, soap or shoes, furniture or provisions or any of the thousand and one necessities of life, the flowers are used to draw attention to them. The designer of carpets, of wall paper or of any choice materials in any class of merchandise seizes at once upon flowers as a never failing attraction to the eye of every man, woman or child. The craving for flowers is as natural as that for food and no one is exempt from it, no matter how depraved the character.

The earth in prehistoric times, before the advent of man, was probably destitute of flowers. In the older fossil formations there are no flowers, simply leaves, but by the time man in due course arrived on the scene, the atmosphere on the earth had been gradually so changed that it became suitable for flowers as well as the human race. In the great scheme evolved from the inner workings of natural forces flowers were not placed on earth until man was here to enjoy them; the two were contemporary. In the primitive ages they were necessary to man in many ways and the most savage and uncultivated races enjoyed them, some even going so far as to make gods of various species and worship them. Today the very fact that they are enjoyed in a more reasonable and almost a subconscious way, even by those who rail at the cost of the expensive kinds supplied by the florist, show that they are more necessary to the human race than ever before. And they always will be a necessity.

The Boston Orchid Exhibition, 1910.

The schedule for the great exhibition of orchids that is to be held in the fine hall of the Massachusetts Horticultural Society, May 26-30, 1910, has been published. The splendid prizes offered will doubtless have the effect of bringing out a magnificent show of these plants and should prove of great value in popularizing orchid culture all over the country. While orchids are being more and more grown by the trade for cut flowers it cannot be said that private collections of orchids are advancing with the same rapidity. Should this exhibition serve to interest affluent patrons of gardening and popularize them also with the amateurs, it will benefit horticulture generally by widening its scope in both respects.

The grand prize is offered for a group of orchids in bloom arranged for effect, and consists of $1,000 in cash and a gold medal, the second and third prizes being $500 and a silver medal and $250 and a bronze medal, respectively. Such offers should bring out the best from all parts of the world, as there are many other good prizes. Regarding the European growers it is perhaps a little unfortunate that the exhibition will just about clash in date with the great show of the Royal Horticultural Society in the Temple gardens in London, Eng. The reason in each case, of course, is the fact that at that time orchids are at their best and more species are due to flower than at any other time. A good point about the schedule is that the points that will be allowed for judging in each class are clearly set forth and exhibitors can see at a glance what they must aim at in order to be successful. Such a spirited attempt by this world-famed society to put orchids on a higher plane in America is deserving of the very hearty support of both trade and private growers and we trust that it will be rewarded with a magnificent exhibition.

Important Foreign Exhibitions.

May 19-21.—National Horticultural Society of France, annual exhibition le Jardin des Tuileries, Paris, France. Abel Chatenay, secretary, 1 Rue St. Aubin, Vitry-sur-Seine, France.

May 25-27.—Temple show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 2.—National rose show, National Rose Society, Royal Botanic Gardens, Regents Park, London, N. W., Eng. H. Mawley, secretary, Rosebank, Berkhamsted, Herts, Eng.

July 6-7.—Holland House show, Royal Horticultural Society, London, Eng. Rev. W. Wilks, secretary, Vincent square, Westminster, London, S. W., Eng.

July 23.—National sweet pea show, National Sweet Pea Society, R. H. S. Hall, Vincent square, Westminster, Eng. C. H. Curtis, secretary, 2 Adelaide road, Brentford, London, W., Eng.

September 8-9.—Royal Caledonian Horticultural Society, Centenary show, Waverly Market, Edinburgh, Scot. John McKenzie, secretary, 23 Rutland square, Edinburgh, Scot.

Meetings Next Week.

Baltimore, Md., April 26, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Cleveland, O., April 26, 7:30 p. m.—Cleveland Florists' Club, Progress hall, 2610 Detroit street.

Hartford, Conn., April 26, 8 p. m.—The Connecticut Horticultural Society, County building.

Lake Forest, Ill., April 28, 8 p. m.—The Horticultural Society of Lake Forest, Council Chamber, City Hall.

Lake Geneva, Wis., May 1, 8 p. m.—Lake Geneva Gardeners' and Foremen's Association, News building.

San Francisco, Calif., May 1.—Pacific Coast Horticultural Society.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc.

Situation Wanted—By an all-around grower, commercial or private place, single, 17 years experience. Key 851, care American Florist.

Situation Wanted—A young man, college graduate with experience in landscape gardening and park work desires position with landscape firm. Key 853, care American Florist.

Situation Wanted—As working foreman of roses, carnations, chrysanthemums and violets; good references; married; give full particulars with wages please. Address H. M., care 234 E. Madison St., Lancaster, Pa.

Situation Wanted—By young married man as grower of carnations, 'mums, vegetables and bedding plants; either commercial or private and near Philadelphia; 10 years' experience; best of references; at liberty June 1. Address Key 828, care American Florist.

Situation Wanted—By an expert propagator and grower of general line of cut flowers and pot plants; German; ten years in Germany, six years in this country; can take charge; sober and steady; only good place wanted; married; 29 years old. Address B. KAEZOR, 332 Mettler St., Toledo, Ohio.

Situation Wanted—As foreman or manager by a young married man age 35; good business education; 17 years' experience in all departments of the business, roses especially; now employed on one of the large places near Chicago; a permanent place with good wages desired. Key 846, care American Florist.

Situation Wanted—Competent bookkeeper; open to engagement in seed nursery or floral establishment; has had practical experience in horticultural line and speaks several languages. Could assist with other work besides bookkeeping if necessary; German, age 35. Address Key 842 care American Florist.

Help Wanted—Handy young man as apprentice. DOUGLAS BLVD. FLORAL CO., 425 Douglas Blvd., Chicago.

Help Wanted—A sober, industrious man, with knowledge of perennials and of handling hotbeds; Swede preferred; good wages. MOSBAEK GREENHOUSE CO., Onarga, Ill.

Help Wanted—A man for general greenhouse work; one experienced in propagating pot plants, 'mums and bedding stock. Address Key 849, care American Florist.

Help Wanted—A competent young man to do general greenhouse work on retail place; nice place; county seat; near Pittsburg, Pa.; Catholic preferred. Key 844, care American Florist.

Help Wanted—An all-round greenhouse man, single, who understands designing; carnations, 'mums, pot plants and general line of plants; sober, give reference also state wages with board and room. J. M. NUSSBAUMER, San Angelo, Texas.

Help Wanted—Reliable man to grow general stock, carnations, 'mums, roses, potted stuff; house now being built, 22x140; must be sober, reliable and capable of taking entire charge; position permanent; give references and salary expected in first letter; place ready May 15. HOSKINS' FLORAL CO., Bismarck, N. Dak.

For Sale or Rent—Greenhouses, close to Rockford, Ill.; 10,000 feet of glass; lot 120x165; 6-room dwelling house on premises; plant just rebuilt after fire. No stock. Address EDWIN DEMPSEY & CO., Rockford, Ill.

For Sale—Like new two Hitchings greenhouse boilers, Nos. 22 and 23; capacity, glass area 450 feet and 675 feet. Price, $180.00. Address WILLIAM LE BAW, Plainfield, N. J.

For Sale—In central northern state an old established florist business over 15,000 ft. glass well stocked, about ten acres land, $2,500.00 down ballance on time to suit purchaser. Key 799, care American Florist.

For Sale—5 greenhouses, 6,000 feet of glass, in perfect order, built 3 years, stocked with vegetables and bedding plants; a rare opportunity for a vegetable grower; 4 acres of land; ready sale for everything you can raise; will be sold at a bargain; owner got to leave city; easy terms; location, Okla. Key 850, care American Florist.

FOR SALE BEES

Full colonies, $7.50; Three frames of bees with queen, $5.00.

W. C. DAVENPORT, 4166 Central St., Chicago.

For Sale.

Good retail store in one the best business cities of the middle west. Now clearing $2500 annually, and showing an improvement every year. Fine opportunity for a pushing man. Good reasons for selling. Address

Key 852, care American Florist.

For Sale at a Bargain.

My greenhouse establishment, wholesale and retail; 35,000 sq. ft. of glass in town of 10,000, 10 miles from Chicago; also dwelling and 15 lots; must sell on account of sickness. **F. R. HILLS,** Maywood, Ill.

Men for Outdoor Wook.

We want two good men experienced in the planting and trimming of shrubs and in general jobbing work around small private places. Give full particulars, including experience, age and wages expected. Address

Key 854, care American Florist.

EASTER TRADE FAIR.

The Easter trade of this city and vicinity was not as large as that of last year. Competition in plants was acute; the trade was overdone by the growers, and the latter sold their goods to all sorts and conditions. The best plants sold well, nothing being too good or too high for the discriminating purchaser. Azaleas were first in call, with plenty of demand at $2.50-$8. Fine Vervæneana were scarce, but Prof. Wolters filled in nicely in the large sizes and Van der Cruysen was the chief in evidence, with a few splendid Simon Mardner to round out the show. Few hydrangeas were seen. Easter lilies were cleaned up at 25 cents per flower. The supply was not as large as in 1908. In pan stock we noted a steady call for red tulips. Daffodils seem to attract the cheap buyer. Marguerites in 6-inch pots sold well. Taken altogether, the plant trade was one-quarter to one-half less than last year, according to the florist and his location. Carnations were in very poor call at 60 cents to $1 per dozen, with a few going at $1.25. Enchantress and Winsor were good. The crop was not large. Bride, Bridesmaid, Killarney, Chatenay and Richmond were in abundance and at scarcely any raise from regular rates. At $1.50 to $3 the public obtained dozen lots that were duly appreciated, Richmond especially finding favor. While the business was not within 15 to 20 per cent of last year's call for violets, still they were in large demand and the chief flower of commerce; $2 per 100 was the prevailing figure for good quality Princess. The weather on Thursday was a gale of dust, Friday was heart-breaking rain, Saturday was clear and cold, and Sunday was a dream of a day. M. M.

DAYTON, O.—H. H. Ritter reports sales at Easter as one-third greater than those of last year at the same prices. Plants were scarce but there were plenty of cut flowers though all sold out.

OMAHA, NEB.—Sales with J. H. Bath showed a slight increase over those of last Easter at similar prices. The cut flower supply and demand were about equal but there were more plants than needed with the exception of lilies which were in great demand.

Fischer's Grand Freesia Purity
The Unequalled, White Decorative Freesia.
Send in your orders early if you want to secure the large sizes. I am booking large orders now for them and will have to refuse orders for Mammoth, although I will have many more than other years. My stock is absolutely pure as great pains are taken to remove any rogues that may appear. All seed pods are removed, avoiding all danger of mixture, as **Purity** does not come true from seed. Dealers getting getting their stock from me will always be sure of getting the purest stock.

EASTER TRADE REPORTS.

TOLEDO, O.—Geo. Heinl reports an increase of 10 per cent in sales at Easter at prices about the same and plenty of stock. Roses in pots and cut sold poorly, but violets sold well.

GALENA, ILL.—Ben Vandervate has just closed the most successful flower show he has ever held here. Easter lilies and flowers of all kinds were disposed of at a rapid rate during the show.

POMONA, CALIF.—O. Roessner reports Easter sales as about the same as last year, with no better prices and plenty of stock. All plants sold well and carnations were the best property in cut flowers.

BUFFALO, N. Y.—S. A. Anderson reports no increase in sales at Easter, the weather being very bad. Prices were low and stock plentiful in cut flowers. There were just enough plants to meet the demand, but no more.

BERKELEY, CALIF.—E. M. Sanborn reports a drop in Easter sales of about 10 per cent from those of last season, with lower prices on some goods. All flowering plants sold well, lily of the valley and Easter lilies being most in demand as cut flowers. The best of the business was crowded into the last two days.

LOS ANGELES, CALIF.—The Ingleside Floral Co. reported a business almost double that of last year at Easter at similar prices and plenty of good stock. Easter lilies and spireas in pots sold well but lily of the valley made up was not so popular. Carnations sold best in cut flowers. All other retailers report good busines and the fakirs were out of it for once.

ROCKLAND, ME.—H. H. Billings reports a 25 per cent increase in sales at about the same prices as last Easter. There were plenty of flowers and plants and a good demand for jonquils, carnations, lilies and azaleas.

MOBILE, ALA.—Sales at the Chatogue Greenhouses were about the same as last year, but prices all through the season have been low. Wholesale orders for cut flowers had to be refused to all but regular customers. Lilies were scarce.

LEAVENWORTH, KANS.—The Easter business with R. C. Hinz showed an increase of about 10 per cent under similar conditions of prices and supply. In plants lilies and those of a cheaper grade sold best, carnations and bulb stock in cut flowers.

WILMINGTON, DEL.—H. P. Potter reported sales at Easter as about 25 per cent greater than last year, with prices the same and plenty of stock in all lines. Fancy plants sold well, roses a little slow, also violets in cut flowers, but as everything sold out it was hard to determine which flowers sold best.

AKRON, O.—The Akron Floral Co. reports a 25 per cent increase in sales over last Easter. Pot plants brought better prices, but cut flowers were cheaper. Easter lilies were scarce and dear owing to diseased bulbs, and cut bulb stock sold well. This company carried a very large and extremely varied stock in all lines.

ALBANY, N. Y.—Business with Meany & Tracey at The Rosery was 10 per cent better at Easter than that of a year ago at similar prices. Sweet peas, lily of the valley and orchids were slow, but all other stock was plentiful. Bulb stock, both in pots and cut, was slow sale, but pot azaleas, lilies and rhododendrons sold well. Medium-priced hampers and baskets sold better than ever before.

"Give Us a Trial. We Can Please You

Roses, Carnations and all kinds of Seasonable Flowers in Stock.

WM. F. KASTING CO. Wholesale Commission Florists.
BUFFALO, N. Y.
Florists' Supplies and Wire Designs.

TAMPA, FLA.—The Tampa Floral Co. reports an increase of 10 per cent in sales over those of last Easter at prices a little lower and plenty of stock. In plants, palms and foliage plants were leaders, roses, carnations and violets all selling well in cut flowers.

KANSAS CITY, MO.—The Alpha Floral Co. reports a 20 per cent increase in sales this Easter at considerably better prices and enough of everything to go around. Easter lilies were the best sellers in plants, next spireas, hydrangeas and Crimson Rambler roses. White Rambler was not saleable in plants, nor were colored sweet peas, but other lines of cut flowers sold well. A great deal of funeral work materialized around the holiday and many of the helpers had to work all night getting it out. Twenty-seven hands were employed, many of them a week beforehand, and even at that there was much difficulty in getting the work out on time.

St. Louis.

MARKET OVERSTOCKED.

The wholesale houses on Saturday were all heavily loaded up and the increase in the supply of everything was apparent. The weather has become very warm; carnations, good stock, could be obtained for $1 per 100 and extra fancy for $1.50-$2. Roses could be bought at low figures. Violets have at last seen their day and quite a few of the growers have quit picking. Sweet peas are increasing and prices are on the downward trend. Quite a few callas and Lilium Harrisii are still in; lilac is expected next week as the warm spell will bring it on quickly.

NOTES.

Crowds gather daily at the Missouri Botanical Garden to get a glimpse of the tulips which are on exhibition all week free to the general public. All varieties are gorgeous and there is a great variety of plants including magnolias and vanilla in bloom. In one of the greenhouses is one of the finest specimens of this orchid in America. These form a great attraction.

The opening of the American League baseball park furnished quite a little business, several large pieces were sent to the management and individual players. Quite a number of advance orders were received for the opening of the National League season next Thursday.

Park Commissioner Scanlon decorated the chamber when Mayor Kreisman took his seat; the decorations were very fine. The retailers were busy generally, large quantities of cut flowers going to the inauguration.

C. A. Kuehn received his first consignment of outdoor white and purple lilac from southern Illinois. It brought from $3 to $5 per 100 sprays.

We regret to announce the death of W. J. Pilcher father of W. J. Pilcher of Kirkwood. The funeral took place on Saturday.

W. F.

Cincinnati.

TRADE VARIABLE.

Business up to last Saturday was all that could be expected; prices remained firm and the wholesale houses sold out the stock every day. There were no gluts of any flowers, in fact there was a shortage in some lines principally American Beauty roses. Flowers were fine, the delightful weather having a tendency to make them hard and no complaints were heard about the keeping qualities. Saturday, however, the weather began to warm up and on Sunday it was hot. On Monday immense quantities of all kinds of stock began pouring into the commission houses from all quarters and it was an utter impossibility to move one-third of it. But this is to be expected as it has been a long time since we have had a glut and no doubt the time has arrived.

NOTES.

J. A. Peterson took a day off Monday and came down to the city on a little business. At present he is busy putting in cement benches on the Wittbold system and is very well satisfied as far as he has gone. He contemplates changing all his wooden benches to this system as they wear out. Mr. Peterson claims the cement benches to be cheaper than wood. For instance on a bench 12x108 feet, he used $11.70 worth of cement. This, however, does not include posts. The sand and ashes used in construction was all old material having been used previously in the propagating bed and on the benches for plants. The wire netting was also old material which was used years ago and had been stored away. Mr. Peterson is very anxious to have his brother florists call and inspect his benches and form their own opinions. The latch string is always out at this place.

At the meeting of the Florists' Society, Saturday evening, about 15 members were present. All committees in charge of S. A. F. affairs reported progress and Wm. Murphy, Dick Witterstaetter, Gus Adrian, E. A. Forter and J. W. Rodgers were appointed a committee of five to induce more members from this city to join the national society. The next meeting takes place Saturday evening, May 8, and we hope to have more members present.

Julius Dillhoff, representing Schloss Bros., New York, was in town the past week with a nice line of ribbons. He reports business on the increase all along the line.

A. J. Horning is the name of the party who purchased the greenhouses from Mrs. Wm. Cunningham, 935 Ludlow avenue, Clifton.

K. Wolff has opened a retail store at 1631 Western avenue.

S.

SPRINGFIELD, MO.—Had there been more stock available W. A. Chalfont says he would have sold more, but as it is sales were equal at Easter to those of any other season. Everything in sight was sold out, two large funerals helping the clearance.

GLUT OF ROSES IN MARKET.

There have been big supplies of stock of all sorts in the market the past week. The glut of roses was particularly noticeable, all the growers seeming to be in crop together, which is only natural at this time of year. All varieties are showing flowers of excellent quality and the poorer ones go begging for customers at any price. American Beauty roses are selling well and are of good grades. Carnations are little more than equal to the demands of the market; the fact that some growers are off crop helps out the balance on this item. Bulbous stock is not moving any too well, more outdoor flowers being seen again. Outdoor lilac is among the offerings. A novelty for this time of year are small yellow and pink chrysanthemums. The yellow were forced last year and found to meet with some little favor and this year the pink (Grunewald) have been added.

NOTES.

Samuel Muir's fine store on Michigan avenue is a remarkably fine sight now. Excellent plant stock and baskets very artistically arranged are the principal attractions and the genistas are especially good and make a fine feature. Mr. Muir reports a very satisfactory Easter business at both stores in all lines. In the greenhouses adjoining the Michigan avenue store the stock is in excellent order, fine batches of Begonia Gloire de Lorraine, small ferns, Dracæna fragrans and others, crotons and, in fact, all the popular decorative and flowering stock, being seen. Bedding stock is coming along in great shape, the large blocks of geraniums such as S. A. Nutt, Poitevine, Mrs. E. G. Hill and the beautiful semi-double pink Jean Viaud looking remarkably well.

Bassett & Washburn have been exhibiting a vase of E. G. Hill's new Rose Princess, a summer blooming sort of a beautiful shade of pink. The flower is nearly as large as an American Beauty and borne on a strong stem with fine, heavy foliage. If it can be generally grown as fine as the specimen vase shown, it will be a great addition to the summer roses. Its keeping qualities seem to be of the best, as the flowers were shipped Saturday and on Monday showed up as well as ever. Bassett & Washburn have decided to give it a trial in their greenhouses.

The Chris Pfeiffer Boiler Co., 66-68 Michigan street, Chicago, has just put out an attractive booklet calling attention to that firm's fire box boiler. This concern is by no means a new one, having been established in 1871, and incorporated in 1900. During the past 35 years, or more, a studied effort has been made to establish a reputation for a reliable product and general square dealing. But it is only recently that any special effort has been made to meet the particular requirements of the greenhouse trade.

George Mugler, secretary of the west park board of commissioners, appeared before the legislature at Springfield April 14 in connection with a bill prepared by the commissioners. This bill asks that they be authorized to issue $1,000,000 in bonds for the establishment of several more parks.

The A. L. Randall Co. is receiving a novelty in the shape of yellow and pink chrysanthemums. It will be remembered this firm had yellow ones last spring, and so well were they liked that the same grower decided to force them again this season and added a pink one.

The Kroeschell Bros. Co. last week started one of its large boilers all the way across the continent, having an order from a California vegetable grower for a complete heating outfit, including this firm's new piping system.

A trip of inspection over the territory included in the proposed forest reserve on the borders of the city and to several of the small parks was made Tuesday afternoon by a delegation from the state legislature.

Arbor day is April 30, according to Governor Deneen's proclamation and appropriate programmes to be observed by the school children on that day are now in course of preparation.

The Lord & Burnham Co. will open a branch office in the Rookery building, corner La Salle and Adams street, on May 1. It will be under the management of Geo. Sykes.

J. Shattls is now associated with his brother in taking care of the local trade of Lion & Co., of New York. M. Shattls left Monday for a five weeks' business trip.

V. Bezdek, of Wilmette, is putting up an addition of six new houses, for which the A. Dietsch Co. is furnishing the material.

The death last week of Francis Calvert, of Lake Forest, is noted in our obituary column elsewhere in this issue.

The J. B. Deamud Co. reports some large orders for wild smilax, which this firm can still furnish in quantity.

Winterson's Seed Store is in receipt of a carload of bay trees and reports two more carloads on the way.

Geo. Asmus is suffering from an aggravated case of primula poisoning, as is also Mrs. John Bruchner.

W. N. Rudd, who has been confined to his house the past week with the grip is better.

The Poehlmann Bros. Co. has made a start in the growing of orchids.

Visitors: Ed. Roehrs, Rutherford, N. J.; W. Billingsley, Indianapolis, Ind.; James Schols, Jr., Grand Rapids, Mich.; Otto Benthey, New Castle, Ind.

21 Wabash Avenue, CHICAGO.

Illinois State Fair.

The department has secured for next fall's exhibit at the Illinois state fair, Springfield, all of the rotunda of the Dome building, a circular space containing about 13,000 square feet of floor space, exclusive of the main aisle. There is a premium of over $2,700 offered in this department. The walls will be well decorated and every facility offered for making the finest display ever shown in the state outside of the Coliseum in Chicago. The superintendent of the department is arranging for private space for the florists to make up their artistic designs and pieces in the building, and is also trying to arrange for cooling rooms.

GEO. ASMUS.

SPRINGFIELD, ILL.—Albert Friedley, grower for Miss Belle Miller, is sick.

NILES CENTER, ILL.—The Blameuser Floral Co. has been incorporated with capital stock $25,000. The incorporators are Edward H., Mary and Emil C. Blameuser.

MARION, ILL.—Great damage was done here by a tornado April 6, and at Pittsburg, six miles away, two persons were killed. The Copeland greenhouse was badly damaged.

PEKIN, ILL.—Geo. A. Kuhl has sent out great quantities of flowering and foliage plants this season, his reputation among the trade in far-off western points being as great as nearer home.

MARKET OVERSTOCKED, PRICES LOW.

The past week showed the usual reaction that follows a great Easter trade. To add to this, about the middle of the week, the weather was very bad. On April 14 there was a continuous downpour of rain and "nothing doing" was the watchword. The increase in the volume of stock arriving, was marked and there was a general decline in prices. American Beauty roses dropped to 25 cents for specials and they were slow at that. Cut Lilium longiflorum has been coming in large lots and five cents was the best offering the last of the week. That however, is no surprise to those who follow the market. Orchids and lily of the valley, not being plentiful, are holding up better than any other stocks. Sweet peas are very plentiful. One wholesale firm on Twenty-eighth street, sold 15,000 bunches to one man April 17 and there were many others. The tea roses are more plentiful as are carnations and the prices of both are on the decline. Violets have been going at all sorts of prices, but will soon be over. The weather of the last of the week was fair and warm and the prospects are good for a great influx of stock throughout this week. Saturday was a very good business day, and though no high prices were realized, a great amount of stock was moved. There is a lively trade in geraniums, pansies and "button" daisies for planting out.

NOTES.

Geo. Sykes, for many years connected with the Lord & Burnham Co., will go to Chicago May 1 and open an office in the Rookery building, La Salle street, where the company he represents will hereafter have western headquarters. There is not a big or little thing about greenhouse building, from the furnace to the peak of the roof, but Mr. Sykes knows all about it.

Mrs. W. C. Krick and her sons have recently made great improvements in the machinery of their factory for the manufacture of immortelle letters, plant stands and pot handles and hangers, 1166 Greene avenue, Brooklyn. While considerable expense has been entailed, the ultimate object is to reduce the cost to the consumer.

A garden on an ocean liner is among the new things in horticulture. It is said that one of the steamers of the Hamburg-American line, when it next sails from New York, will carry a small portable greenhouse on deck in which lettuce and other small vegetables will be grown for the table.

Robert Craig came over from Philadelphia early in the week and was storm-bound. After the clouds rolled by he visited some of the leading growers of this vicinity.

The new wholesale flower market that A. L. Young proposes to start at 46 West Twenty-eighth street is one of the largest and finest stores on the block.

N. C. Schreiner has been receiving large consignments of arbutus from Maryland and sales have been good.

Frank Millang, who has been very low with pneumonia, is, we are glad to state, rapidly improving.

The Julius Roehrs Co. will install a Kroeschell boiler this season.

A. J. Guttman and M. W. Kempner have formed a partnership.

Buffalo.

EVERYBODY SATISFIED.

The retailers can well feel satisfied with the trade as a whole. The cut flower trade was no better than last year with the exception of violets, lily of the valley and orchids, which showed an increase. Plants were good and sold well. Made up baskets were as much in demand as in other years and more tastily arranged. Roses are not called for as much as they were, no matter how they are arranged. Baby Ramblers, azaleas and lilies had first call, hybrids and tulips coming next, with lilacs in a class by themselves. Hyacinth pans, spireas and other bulb stock is handled in limited quantities by the down-town stores owing to their being so easily broken or showing the effects of not being watered. Hydrangeas were good and had a ready sale. Trade before and since has been very good.

NOTES.

The Florists' Club had its first meeting under the new administration and bids fair to have a busy time. The committees appointed by President Slattery will try and aid him in increasing the membership and providing entertainment for the club.

The Italian garden of J. Benson Stafford had a nice trade as did the Lenox Flower Shop, both having had their first Easters. A fire near the latter on Friday flooded the cellar but fortunately did not hurt the stock.

S. A. Anderson had every reason to be happy for Easter as his advance present was a young daughter which arrived on April 1. Baby Elizabeth is doing fine and expects to call at the store soon.

There are no removals this year, and Arthur Beyer will be in his new location by May 1.

BISON.

Baltimore.

EASTER TRADE GOOD.

The Easter market proved one of the most satisfactory for several years. There was, as a rule, ample supplies of nearly all kinds of stock, and the weather had been such as to bring it out ready for delivery in good shape, whilst buyers were abundant, and the best of feeling prevailed all down the line of producers and consumers. Warm and sunshiny weather had prevailed until a day or two before the great vernal holiday, but on Friday and Saturday the temperature fell and cold, sharp winds played havoc with stock which was exposed outdoors. The market men suffered greatly in this direction, the stores of course being exempt from this trouble. Stores never were more handsomely decorated, and the moving stream of passers-by enjoyed to the utmost the choice productions which filled the windows. One retailer on N. Charles street (Seidepark board of cimmissioners, appeared witz) changed his color scheme each day, one day having white, another yellow, purple, red, etc. Wm. J. Halliday invited visitors who merely wanted to see the flowers to inspect his store. More advertising was done in the trade probably than ever before, especially in the use of the newspaper mediums, though some showed a preference for the trolley cars. White carnations were decidedly short of supply, and there were just about lilies enough to go around. Violets were abundant in the hands of the curbstone merchants, but the bulbous stock from the south seemed to have been ahead of the holiday, and was not conspicuous by its abundance. At the Exchange on Saturday evening practically everything was cleaned out, and the results for the week, according to John J. Perry, the manager, show sales largely in excess of last year. The week following Easter saw many weddings, and there was good inquiry for suitable flowers. The most expensive preparation from the point of view of florist and decorator was the Tailer-Brown wedding. The ceremony was performed in the private ball room of the bride's home amid a great profusion of plants and cut flowers. Many of the palms, etc., and lilies came from the greenhouses on the family place in the suburbs, but Samuel Feast & Sons had general charge of the decorations.

Henry Eberhardt, long established near Catonsville, and having a stall in the Lexington market, died the week before Easter. The business is being carried on by his son.

S. B.

Madison, N. J.

Rose night, April 14, brought out a large attendance at the Morris County Gardeners' and Florists' Society's club rooms. There were many exhibits of merit in cinerarias, gloxinias, carnations and orchids, but the rose was queen as the following report will show. The exhibit of White Killarney from the F. R. Pierson Co. was magnificent and was awarded a vote of thanks, as it received certificate of merit here last October. My Maryland, from S. J. Reuter, was fine and was awarded certificate of merit. Vases American Beauty from Brant, Hentz Floral Co. and J. Ruizicha were awarded cultural certificates. Vases of Bride, Bridesmaid, Richmond and Killarney by J. Ruizicha were awarded a cultural certificate. Vase of Bride, by Geo. Harvey was given honorable mention. Vase of Bridesmaid by Wm. Falconer was given honorable mention. Vase of Killarney by Mrs. G. F. Stone (Ernest Wilde, gardener) was given a cultural certificate. Vase of Richmond by C. A. Work (Wm. Muhlmichel, gardener) was given a cultural certificate. Vases of Killarney, Bride and Bridesmaid by Wm. G. Badgley were given a cultural certificate. Six pots of gloxinias from C. B. Hedden (Alex. Michel, gardener) were given a cultural certificate. H. B. Vyse, gardener to A. R. Whitney, won the Bunyard special prize of $5 with a fine specimen of Cineraria stellala. This makes the second time Mr. Vyse has won this annual prize.

Wm. G. Badgley, who was solicited only a week or so before the meeting, stepped in the breach and gave us a fine paper on the rose. It was full of good common sense. A long after discussion took place and the rose men enlightened us on many points not well understood. John R. Mitchell, Wm. Muhlmichel, Joseph F. Ruizicha, David Falconer and Chas. H. Totty did most of the talking. One interesting fact brought out was that American Beauty is not doing well on cement benches. It is claimed that this rose absorbs too much of a deleterious element from the cement. Anyhow they are next to worthless with a number of growers—a timely warning to others. A rising vote of thanks was given Mr. Badgley for his able effort. Among the visitors were Dr. W. A. Robbins, H. A. Bunyard and our past-president, John Heeremans, who now resides in Palmetto Bluffs, S. C., where he has charge of R. T. Wilson's extensive estate. Mr. Heeremans presented a box of habanas to fumigate the roses with. Mr. Bunyard, who is chairman of the outing committee of the New York Florists' Club, solicited the attendance of members of this club to the outing. It was decided to hold our next fall show on October 27-28, in the assembly rooms.

THE WEEK AFTER.

The week after has been fairly full of business, there being several good sized weddings which called for considerable displays of cut flowers and plants. Easter lilies and callas were in good demand as well as hydrangeas, which were used as cut flowers in vases and for bouquets. The supply of roses is now greater than the demand and as a consequence prices are falling. Special American Beauty is quoted at $3 to $5, with sales of fancy stock at the former figures. Specialties are now about high at $12 per 100, although $15 is asked for some. Very good medium stock is offered at from $4 to $8. Carnations are plentiful with no reasonable offer refused. The best sellers are sweet peas with which the market was never more abundantly supplied than this season. The quality is excellent and there is a good range of colors from white to purple; $1 is high, the majority bringing 50 to 75 cents. There are still a few good Emperor daffodils; the tulips appear about done for the season; snapdragon and stocks are seen in quantity and help to make variety. Gardenias sell well, the demand being better this season at increased prices. Prices have ranged from 25 to 75 cents, the great bulk of the winter's cutting going for 50 cents straight. At these prices they should prove a profitable crop to the grower who can turn the trick, a thing which, by the way, seems hard to do. The orchid returns have also been most satisfactory. Many more plants are now forced, possibly three times as many, as five years ago, and still with this increase in the supply the market, except for a time in the fall, held firm, prices ranging from $5 to $6 per dozen. As the supply increased the market widened, the wholesalers finding a ready market from their out-of-town customers. So it would appear that there is every encouragement for the growers to put their best foot forward, as all choice and rare blooms will find a waiting market at remunerative prices. That the up-to-date growers are waking up to this is seen in the large consignments of orchid plants that are coming into the market. Jules Wolf and Joseph Heacock have recently received large importations as has Alphonse Pericot of Collingdale. The Barton brothers, George and Alfred, are receiving large consignments of cattleyas so that the output for the market will be almost doubled when this added stock begins to come in. As a flower for personal adornment the orchid and gardenia are pushing the violet hard and next year will prove very strong competitors.

NOTES.

John Welsh Young has purchased 16 acres at Roslyn, just above Chestnut Hill and has a contract with the King Construction Co. to erect three houses 35x300 feet all for roses. An artesian well has been bored, finding water at a depth of 276 feet. This will be supplied to the houses from an underground basin by means of air pressure. The heating of the ranges will be by steam. The construction of a house the size of one of these would, a few years ago, have caused considerable comment; now it is accepted as a matter of fact and in keeping with the forward march of the times.

The Lord & Burnham Co., through Dennis Connor have landed the contract for three large houses for the Robert Craig Co. to be erected on their 16-acre tract at Norwood, just outside the southern city limits. Through a change in the plans of the corporation which had purchased Mr. Craig's property at Forty-ninth and Market streets, it will not be necessary for him to move possibly for a few years, which is appreciated by his firm, as the houses are in good condition and fit for several more years good service.

Edwin Lonsdale has written a very entertaining article on horticulture in the United States and England, making comparisons of the art there and here. This has been published in the school journal of Girard College, where Mr. Lonsdale is chief of the horticultural department and grounds. The article is very instructive and entertaining and will doubtless instill in the minds of some of the growing youths of the school a desire to follow in his footsteps and those of others he mentions in the craft as being successful.

Bobbie Shock, who keeps the M. Rice & Co. stock on the shelves of the retail stores and sees to it that nothing is wanting, says he had a splendid Easter trade and is well satisfied with his new position.

The Leo Niessen Co. feature long stemmed American Beauty roses, and very choice stock; snapdragon is also a specialty and extra sweet peas, which the firm says are great favorites with customers.

Wm. McKissick & Brother have a leader in orange blossoms which are much used for the spring weddings. Extra fine Emperor daffodils and a splendid show of sweet peas are also seen in quantity.

The Florex Gardens are sending in very choice American Beauty roses from their large house, which is now in full crop again. Length of stem any size to order.

Mrs. Robt. Kift and daughter are in Bermuda on a few weeks' vacation.

K.

Boston.

A GOOD WEEK.

The week following Easter found a great demand for funeral work. The week was a most successful one for all concerned, the growers being well prepared for all demands. The better classes of goods sold well, but a noticeable reduction in all grades of roses was noticed. American Beauty was of fine quality and in sufficient quantities to meet all demands. Carnations are holding their end fairly well but are coming in by the thousand and as a consequence the list has dropped rapidly. Bulb stock is on the wane. Sweet peas are seen in greater quantities than ever. The varieties offered are more numerous and several weak points in this stock have been overcome this year. The bulk of the ordinary varieties bring $7.50 per 1,000. Lily of the valley is scarce and outside dealers have responded to the heavy demands. The plant growers have not yet recovered from the Easter period, and many who close the indoor department with this holiday are now devoting their attention to bedding stock.

NOTES.

W. H. Elliott, who has leased a new store on Park street, which is now being renovated, expects to be installed the coming week. It is an ideal location and the up-to-date salesroom now being remodelled will offer the greatest convenience for customers and greatly facilitate the handling of the immense number of roses produced by the combined establishments.

Frank White, although rushed to the limit in handling his bulb and bedding stock, was found eagerly shaking hands with his numerous friends who extended their congratulations upon the arrival of a new citizen at Holbrook, where the proud parent is actively identified with all town affairs.

On April 7 quite a number of private gardeners and seedsmen gave a surprise to Wm. Westland, who is leaving the Francis Blake estate after seven years' service. He was presented with a purse of gold, together with the best wishes of the 75 friends assembled. The presentation was made by Thos. J. Grey.

Tom Pegler is showing handsome little plants of the popular Clothilde Soupert rose in pans, which are a pleasing innovation and a welcome addition to the plant specialists.

F. T. Hanley, one of the leading violet growers of New England, is still equipped with a splendid stock of Campbell, which he finds no difficulty in disposing of.

Wm. Tailby, of Wellesley, is on hand rather earlier than usual with his Spanish iris, of which he is the foremost local grower.

B.

[Henry Penn writes as follows respecting our correspondent's note on his automobile accident last week: "Kindly correct report in your columns in reference to automobile of Henry Penn being totally demolished, etc. As a matter of fact the machine was not even scratched let alone demolished. Also same was not used for delivery purposes."]

Boston Gardeners and Florists Dine.

On April 14 the Gardeners' and Florists' Club, of Boston, held its annual banquet, and it was in every way a success, and very largely attended, there being about 175 present, the greater proportion of them being ladies, to whom special credit is due, as the night was one of the stormiest experienced for some time, a regular downpour. Judge Hoitt was the toast master and he was in his best vein. Remarks were made by Messrs. Downs, Craig, Duncan, John Farquhar, Cameron, Barney, and Grey. After the banquet there was dancing until 12 o'clock.

WALTHAM, MASS.—Pierce Bros. handled 35,000 Easter lilies this season, shipping them all over the New England states.

STOCK OVER PLENTIFUL.

The past week of sunshine piled up stock in the commission house at an unlimited pace. It is extra fine and one can buy the best at his own figures; considering these advantages the demand is very light.

On Easter Sunday, 30,000 persons were well repaid for visiting The Phipps conservatories in Schenley Park. They saw a grand display which is a great credit to John W. Jones and his force of growers. In the first house entered at each end and in the centre was a huge mound of Cineraria stellata in different colors, and between these were solid beds of hybrid cinerarias, hyacinths and primulas, the whole bordered with white daisies and spirea. In the lily house, the lilies were interspersed with Crimson Rambler roses, Spirea Van Houtei, and flowering cannas. The hydrangea house was a solid mass of blooms from 700 plants. The orchid house was a revelation and the visitor was compelled to spend a lot of time admiring this gorgeous display. Dendrobium thyrsiflorum, D. densiflorum and D. Wardianum showed up in magnificent shape. Also two spikes of D. nobile nobilius which measured 18 inches each in length. After passing through the azalea and genista house which showed up finely the old fashioned garden was reached which contained wallflowers, lady slippers, sweet peas, etc.

The Zieger Co., East End, had a very elaborate display of flowering plants at Easter and report a very satisfactory business.

Randolph & McClements made up a large blanket using 5,000 Enchantress carnations.

The Pittsburgh Cut Flower Co. is handling quantities of Killarney roses.

John James, of this city, has opened a flower store in New Kensington.

The McCallum Co. is showing some fine Spanish iris and sweet peas.

M. Fitzsimmons, of Randolph & McClements, is ill.

J.

CONCORD JUNCTION, MASS.—Leonard Cousins, Jr., reports wholesale business 25 per cent greater than that of last year at better prices. Cut flowers were all in over supply excepting violets. Easter lily plants were scarce. The wholesale market kept good up to Saturday, when it went to pieces.

ATHOL, MASS.—A storehouse owned by Warren Lee and located near his greenhouse and residence at Athol Center was destroyed by fire April 12. For a time both his residence and his cucumber house were in danger, but both were saved without being damaged. The cause of the fire was unknown and the loss was small and is covered by insurance. Mr. Lee's automobile was stored in the building and was saved.

ALBANY, N. Y.—Amos F. Balfoort had the decorations at the recent wedding of Miss S. B. McCann and Dr. Harold Goodwin. The bride's bouquet was of lily of the valley and orchids, her veil being fastened with the former flowers. The bride's attendants carried yellow and white roses. Mr. Balfoort reports his Easter trade as very good. Pot plants and bulbous stock found a ready sale. He had a big call for cut flowers. Being located in the residential section prompt deliveries were made, which proved of great value to flower buyers as freezing weather prevailed on Saturday and early on Easter Sunday.

The Seed Trade.

American Seed Trade Association.
Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

BERMUDA growers report April 12 good Lilium Harrisii crop prospects up to that date.

JOHN BODGER, Gardena, Calif., will make a tour of the jobbing trade and sail for Europe about May 15.

NEW YORK.—A fire next to J. M. Thorburn & Co.'s establishment damaged part of this firm's stock during the night of April 19.

BOSTON, MASS.—The seedsmen are very busy, the days of warm weather creating a brisk demand. All early peas and Burpee's bush lima beans are very scarce.

SANTA CRUZ, CALIF.—Ernest A. Bailey, of this city has bought a half interest in the A. Mitting Calla Lily Bulb Co., of which he will be the secretary and treasurer and A. Mitting president and manager.

CALIFORNIA BEANS.—About the usual acreage of seed beans will be planted this year. Conditions could not be better for good crops, this season being the rainiest on record. The farmers generally have their land in good shape.

PUGET SOUND CABBAGE.—Cabbage seed growers in this section lost quite a percentage of the heads during the winter, but the spring has been very dry and favorable and if these conditions continue, the crop should be an average one.

THE D. M. Ferry & Co.'s steamer, Eber Ward, corn laden, from Milwaukee, bound for Port Huron, collided with an ice floe about five miles west of Mackinaw City, Mich, and sank in one of the deepest spots of the Straits of Mackinac. Five of the crew were drowned and the cargo and steamer will be a total loss.

THE French bulb situation shows varying prices ever since the meeting of April 17, but the report is that the growers have fixed on a price of about 70 francs to the jobbers for white Roman hyacinths, 12 to 15 centimeters, and for Narcissus Paper White grandiflora, 13 to 15 centimeters, about 18 francs, and for the size larger 25 francs. It is said that the Roman hyacinths will be only an average crop, while there should be a sufficient supply of narcissus to go around.

PHILADELPHIA, PA.—Howard M. Earl, who has had a bad attack of the grip, is at his desk again. Mrs. Earl also has been severely ill and is still confined to the hospital.

JESSE E. NORTHRUP'S portrait is made the frontispiece of the twenty-sixth annual report of the Minneapolis board of park commissioners, just issued. Mr. Northrup was president of the board for a number of years, but declined re-election at the close of 1908.

CHICAGO.—Continued cold rains have seriously delayed the sowing of seed for onion sets.—Contract prices on the board of trade April 20 for grass seed were noted as follows: Prime timothy, $3.80 (nominal), white clover, 16.—Visitors: H. A. Johns, Sioux City, Ia.; C. B. Coe, Detroit, Mich.; A. J. Brown, Grand Rapids, Mich.

The Late Wm. Hagemann.

See Obituary, April 10, Page 557.

THE following seedsmen have each subscribed the amount stated to the Canners' publicity campaign: Jerome B. Rice Seed Co., Cambridge, N. Y., $150; Alfred J. Brown Seed Co., Grand Rapids, Mich., $100; Manitowoc Seed Co., Manitowoc, Wis., $100; Rogers Bros., Alpena, Mich., $100; Everett B. Clark Seed Co., Milford, Conn., $100.

BURNET LANDRETH, secretary and treasurer of the Wholesale Seedsmen's League writes: "Bristol, Pa., April 14, 1909.—Now the finance committee of the senate, presided over by the Hon. N. W. Aldrich, is actively considering the subject of the tariff is the time to write that committee, to the effect that all the seedsmen of the United States are unanimously in favor of a specific duty rather than an ad valorem one on garden seeds, not with the idea of avoiding a customs duty, but solely with the idea of simplifying the system of assessment on importations, and to avoid the irritation of custom house penalties. Will you not today write to Senator Aldrich to this effect?"

Bulb Tariff Schedule.

It is understood the senate finance committee considered the bulk tariff schedule unnecessarily high against Holland, that country having favored the United States somewhat in tariff matters. F. R. Pierson of the Society of American Florists' tariff committee has visited Washington with a view to scaling down the rates to some extent and it is hoped the revised schedule will meet with the approval of those in charge of the Aldrich bill.

Tariff Seed Schedules.

It is understood that Senator Aldrich of the senate finance committee has reported the following schedules on seeds:

THE FREE LIST—PARAGRAPH 664.

Seeds: Anise, canary, caraway, cardamon, cauliflower, coriander, cotton, cummin, fennel, fenugreek, hemp, horehound, mangel-wurzel, mustard, rape, Saint John's bread or bean, sugar beet, sorghum or sugar-cane for seed; bulbs and bulbous roots, not edible and not otherwise provided for in this section; all flower and grass seeds; evergreen seedlings; all the foregoing not specially provided for in this section.

THE DUTIABLE LIST—PARAGRAPH 262.

Seeds: Castor beans or seeds, 25 cents per bushel of 50 pounds; flaxseed or linseed and other oil seeds not specially provided for in this section, 25 cents per bushel of 56 pounds; poppy seed, 15 cents per bushel; mushroom spawn and spinach seed, 1 cent per pound; beet, except sugar beet, carrot, parsnip, radish, turnip and ruta-baga seed, 4 cents per pound; cabbage, collard, kale and kohl-rabi seed, 8 cents per pound; egg plant and pepper seed, 20 cents per pound; seeds of all kinds not specially provided for in this section, 10 cents per pound.

Other paragraphs carry seed peas at 30 cents per bushel; beans, 45 cents per bushel.

California Seed Crops.

San Jose, April 13.—At this season of the year the various seed dealers throughout the United States and Canada are naturally anxious to get some idea as to the crop prospects here in California. The writer begs to state that we have had a very severe winter, with more rain than we have had here for 50 years past. The result has been that on low lands many seed crops have suffered, and in various instances total acreages of various seeds have been destroyed. This is especially true of onion crops that were being grown on the Sacramento and San Joaquin river district. One seed grower lost 150 acres; another lost 25 acres of onions. These losses were occasioned by the breaking of a levee which flooded the land. In the Santa Clara valley district the onions have suffered as a whole by excessive water fully 25 per cent, some crops of onions being totally

Send for our Aster Book for Florists.

James Vicks' Sons, Rochester, N. Y.

destroyed, while others are looking remarkably well. It is the writer's opinion that there still remains in good condition sufficient onion going to seed to supply a reasonable demand of the seed trade for the season of 1910.

Lettuce at the present writing is being reseeded, and at the best we cannot look forward to any large crop of this seed. Of onion, as said before, there will be enough to go around, with the probable exception of Red Wethersfield and White Portugal. These two sorts, it is our opinion, will be short. Carrot is in very limited acreage in California this season. The crops planted are looking well, and we see no reason why we should not harvest a good crop of this seed. Salsify is doing well. Radish promises a good crop. Celery, collards, beet, kohl-rabi, leek, spinach, parsley, parsnip, mustard and endive all promise a good crop at this time. Sweet peas are doing very well.

CHAS. P. BRASLAN.

Connecticut Conditions.

Milford, April 16.—We are just putting our seed bulbs into the ground. Most of them, however, have wintered well and the spring is not an unfavorable one for a propitious start. The condition of the stocks on hand of 1908 production is decidedly healthy. At one time it looked as if there would be a surplus of onion seed at the end of the season, but the general clean-up of seed items will extend so as to include the onion seed. The demand on this item has been first class during the past three or four weeks.

On sweet corn we will be almost literally cleaned out, we think, by the end of planting time. It goes without saying that we shall have nothing worthy of mention to carry over in items of seed peas or beans. Green pod beans have been recognized as a short item for several months and wax varieties which looked longer have been called for to such an extent that it is now apparent that there will be nothing considerable carried over in the way of beans to interfere with the new crop.

We are just now moving seed stocks out into growers' hands in Michigan and Wisconsin and expect to have practically all of our seed stock sown. Acreage has come hard on both peas and beans, but by persistent effort and by trying out some new sections we have succeeded in writing contracts to such an extent that we think we shall be able to get all of our seed stock planted.

ARTHUR B. CLARK.

BUY CALIFORNIA Asparagus Plumosus Nanus Seed.

You can get the best seed grown right here in California. It is fresh large, clean and full of vitality. The best and biggest dealers are our regular customers and their orders are increasing each year. If you are doubtful, just write me and I'll tell you the names of the buyers, some of them perhaps you are personally acquainted with.

Seed will be sold by count with the usual guarantee as to germination, and I will again sell at my usual low, cash-with-order prices as per following list.

1 000 seeds...	$ 2.00	13,000 seeds...	$20.00
6,000 seeds...	10.00	25 0(0 seeds ..	35.00
50,000 seeds...	62.50	100,000 seeds	100.00

If you send me your order I know you will be pleased with the results.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

WINTERS & PROPHET of the St. Morris, N. Y., canning factory, are building a new greenhouse for tomato plants. They propose planting 100 acres for canning this season.

English Market Garden Notes.

Rochford's is one of the best cucumbers but is prone to spot in the leaves. Butcher's Disease Resister is a good second early. Exporter is well spoken of.

Comet is the tried and true friend of the tomato grower. Norfolk Hero is also good and growers have usually their own selections. We stop all leaders at the third or fourth flower truss and remove all laterals.

The large exports of potatoes to America have strengthened the market here but 40 shillings (about $9.60) is the best price per ton (2,240 pounds). We grow largely Early Rose, Up-to-Date and Sir John Llewellyn for seed and are traying the seed and marketing the larger tubers now. The land is already drilled for planting.

Hardening Off Plants.

The three greatest mistakes a gardener is likely to make are thick seeding, late transplanting or thinning and improper hardening off. At this time we will consider the latter. The operator must realize, no matter how hardy a plant may be naturally, if grown under glass it will be tender and exposure must be gradual and well timed if serious checks are to be avoided. The best growers do not force their plants, they know the proper course is to grow plants as nearly as possible along outdoor lines—using the glass and heat only to overcome the extremes of weather. Such plants are readily prepared for removal to garden or field. If plants have been grown warm and confined, it is very important to gradually admit more air on all favorable occasions. This can be done by opening earlier, closing a little later each day and increasing amount of air if winds are mild. In hotbeds the sash can be removed entirely for a short time each day in mild weather. As a rule it is not advisable to expose plants all day for the first time. This should be accomplished more gradually by lengthening the open period each day.

The condition of the air has much to do with success. After a frosty night the air will be mixed with cold currents for several hours, no matter how nice the day, hence it is unsafe to expose tender subjects for the first time on such mornings. The same is true in a rapidly falling temperature—the air is mixed with cold and damage is easily done. The best results are obtained by exposing during rainy weather, or just before a rain, when the air is more likely to be mild. An important feature is moisture. Plants to be hardened off should be moist at the roots. If they show signs of wilting a light sprinkling is very beneficial; if this does not recover them the exposure is too much and covering is in order. Here is where cloth covered sash are a help—we always employ plant cloth to follow glass. It admits light and air and prevents sweeping air currents. After plants have gained hardiness, toughen them by withholding water. In the greenhouse, withholding water is the greatest factor in preparing plants for removal to the fields.

MARKETMAN.

German Process for Drying Potatoes.

According to the Magdeburgische Zeitung, Consul Frank S. Hannah says that the recent experiments in the drying of potatoes under the auspices of the imperial interior department has had such good results that a new and important field of activity may be offered for the German farmers.

The potatoes are reduced by this process to about one-quarter of their original weight and can be kept in a good condition in this compressed form for an indefinite length of time. The military authorities have made thorough experiments with this product and have become convinced that its nutritive value is fully equal to that of corn, and that the dried potatoes can take the place of one-third of the former ration of oats. The fact that the potatoes are reduced to one-fourth of their original weight brings about a corresponding reduction in the price of the freight, so that it will pay to grow more potatoes than has formerly been the case. This naturally has a further tendency to increase the export. This new use for the potatoes will also

"BULBS THAT BLOOM"

BETTER GLADIOLI THAN YOU HAVE EVER SEEN—YOU CAN GROW THEM.

Cedar Acres Gladioli command in the cut-flower market a price six times as high as the regular market rate, because the flowers are larger and finer than any procurable elsewhere With my bulbs and cultural directions you can grow the same kind. They are as easy to raise as potatoes.

The Gladiolus has become the queen of the garden. From the old-time scraggly spike, the Gladiolus has developed into a magnificent and stately plant, bearing a wealth of of color as delicate as the finest orchid. For cut-flowers, they are unequalled in beauty, and last for nearly ten days, gradually unfolding.

My new seedlings including the famous Harvard, Kathryn, and Fireside, have been awarded numerous medals and certificates of merit.

BOOKLET FREE, showing Harvard in full colors, and many other new varieties, with reliable information about each one. **Send for it today.**

have the tendency to relieve the already congested starch and spirit markets. Experiments are still being conducted under the direction of Privy Councilor Koellner, of Moeckern, with the purpose of rendering the process still cheaper.

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points April 17 were as follows: New York, cucumbers, 50 cents to $1.12 per dozen; lettuce, $1.50 to $2 per strap; mushrooms, 25 cents to 75 cents per pound; mint, 40 to 50 cents per dozen bunches; radishes, $1.25 to $1.75 per 100 bunches; rhubarb, $2 to $6 per 100 bunches; tomatoes, 10 to 25 cents per pound. Chicago, cucumbers, $1.25 to $2 per dozen; head lettuce, $1.50 to $2.50 per hamper; mushrooms, 40 cents to 85 cents per pound; tomatoes, 10 cents to 20 cents per pound; radishes, 40 cents to 60 cents per dozen bunches; asparagus, $2 to $7 per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 40 cents to 75 cents per dozen; rhubarb, 6 cents to 10 cents per pound, extra fancy, 14 cents per pound; French endives, 25 cents to 40 cents per pound. Kansas City, cucumbers, $1 to $2 per dozen. Cincinnati, cucumbers, $1.25 per dozen; mushrooms, 50 cents per pound.

A New Method of Keeping Potatoes.

Consul-General Richard Guenther, of Frankfort, reports that a German publication, the "Practical Adviser in Fruit Raising and Gardening," states that a new method for keeping potatoes and preventing sprouting consists of placing them on a layer of coke. Doctor Schiller, of Brunswick, who has published the method, is of the opinion that the improved ventilation by means of coke is not alone responsible for the result, but believes that it is due to the oxidation of the coke, which, however, is a very slow one. Coke always contains sulphur, and it is very possible that the minute quantities of oxides of carbon and sulphur, which result from the oxidation, mixing with the air and penetrating among the potatoes are sufficient to greatly retard sprouting. Potatoes so treated are said to keep in good condition until July.

CORNING, N. Y.—It is reported that Donald Reynolds has been appointed manager of the Corning Floral Co.'s greenhouse on West Pulteny street and Park avenue.

PITTSBURG, PA.—James J. Kent died at his home, 7023 Hamilton avenue, April 13 after an illness of five months. He was a native of Ireland and is survived by his wife and two daughters.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

PRUNE GROWERS of San Jose, Calif., are organizing and recently held a meeting there.

ROCHESTER, N. Y.—F. N. May, who was recently engaged in the nursery business here, died of tuberculosis at the Thomas hospital in Minneapolis, Minn., April 7.

HIRAM GREGORY, a well-known nurseryman, died at his home on Akron street, Lockport, N. Y., April 11. He was 61 years of age. He is survived by a widow, three daughters and two sons.

PROVIDENCE, R. I.—The Meshantient Nursery Co. has been incorporated with capital stock $5,000. E. J. Rojon, Pawtucket, and Francis McCanna and James A Lee, of this city, are the incorporators.

THE initial work of tree planting from the two-year-old state nursery at Asaph, Pa., commences this week, and 46,000 two-year-olds, of which 16,000 are hardwood and spruce, will be immediately set out on barren lands.

The Root Gall of the Peony.

For several years there has been received at this station (Ithaca, N. Y.) from different parts of this and other states specimens of peony roots which show galls or swellings upon them. These galls are most marked upon the smaller roots. However, they sometimes grow on the larger roots and even on the base of the stems. The accompanying illustration gives a fairly good idea of the general characteristics of this disease as it appears on the peony. One is reminded very much of the club root disease of the cabbage. The swellings are not uniform in size or shape, sometimes quite evident and at other times indicated only by a slight, irregular enlargement of the affected root. On cutting across one of these galls one may readily observe a mottled appearance of the cut surface caused by yellowish, watery places in the flesh of the root, contrasting strikingly with the white areas filled with starch. In the healthy root the cut surface shows pure white flesh with an entire absence of these yellowish, watery spots. If a thin slice of the gall be made and treated for a moment in iodine the white portions turn a distinct blue, showing the abundant presence of starch. The watery areas retain their yellow color, giving no starch reaction.

A microscopical examination of the gall confirms the iodine starch test. The watery areas show no starch, while the adjoining and surrounding tissue is packed with it. A section of healthy root shows an even distribution of the starch throughout. Affected plants are characterized also by a lack of a well developed root system. The roots are usually small or short and stubby; the crown throws a considerable number of buds which are small and weak as compared with healthy plants. It has been thought by some growers that the disease is confined to imported stock, but Mr. Farr, of Reading, Pa., informs me in a recent letter that the disease is known to occur very frequently now on American grown varieties. The nature of the disease is, so far as I know, entirely unknown. Mr. Farr points out that by proper treatment these affected roots may be so handled as to outgrow the disease and produce well developed flowers. Below I quote from some of Mr. Farr's correspondence in regard to his experience in handling this trouble:

"I concur in the view that it is better and cheaper to destroy badly affected roots than to bother with them, in case of ordinary varieties. When it comes to the very rare and very expensive roots it is a different matter. If any course of treatment would bring these roots to a state of health they are well worth any amount of time and trouble necessary to bring them to health. My own experience justifies the belief that under proper culture these peonies will eventually regain their normal state. There is some compensation for the time and trouble that they take in the fact that the increase is very rapid and while the results are not in a condition to sell during their period of recovery the time eventually comes, when they have got in good condition, that one will have a large stock to pay for the time and trouble." Speaking of some imported stock Mr. Farr says in another letter:

"When they arrived here they were about the size of one's fist, a bundle of small eyes and stubby roots much decayed and so loosely held together that I at once separated them, in most cases without the aid of a knife, my idea being that the small roots would have a better chance to grow by themselves than in the mass together. The first year they looked like seedlings, one or two small leaves, without stems to mention; next year they were stronger, and by the third year they had formed clusters of small stems closely bunched together. They were separated again. This time the roots were longer, the decay had mostly disappeared and here and there were roots found comparatively smooth. The largest and best were planted together, the smallest kept by themselves, decayed roots being thrown away. This operation was repeated again in two years, by which time many were flowering; each time they were planted in new ground. The last time they were covered with a heavy coat of manure, after the ground had frozen. This seemed to have a bad effect on them as those manured the most heavily developed more knobs during the summer, and the experience of others in this respect leads me to believe that the disease is caused more by the condition of the ground and over feeding than anything else, and that when once it takes hold of a variety it persists a long time, but does not kill the plant, unless it remains in the unfavorable environment. I believe that frequent separating to prevent crowding would induce strong healthy roots to be sent out, and that eventually the plant would become healthy."

ROOT GALL OF THE PEONY.

Investigation upon this disease is now under way by the department of plant pathology. It is hoped that we may be able to discover the cause of this trouble and some means of profitably controlling it. This article is published at this time chiefly for the purpose of calling the attention of growers to the disease and asking their co-operation in solving the problem of its cause and control. It is desired that all growers interested in this disease will furnish us with specimens whenever they can and also give us all the information in the way of observations and opinions which they may have on the disease.

It is only by getting such information from the growers themselves, and by properly summarizing the observations of a large number of men that we will be able to get at the most practicable means of handling such diseases. The writer urges that every grower will

Dreer's Nursery Robbed.

Dreer's nursery premises at Riverton, N. J., were entered by thugs April 13, who after tying and gagging the watchman on duty, ransacked the place and blew up the safe with nitroglycerine, incidentally tearing away entirely the staircase in the office that leads from the first to the second floor. There were five of the robbers, and these surprised Frank Satoniski, the watchman, about 1 o'clock in the morning as he was making his rounds, ordering him to throw up his hands. He was then led to a post in the greenhouse, after having been relieved of his revolver, and left there until the men had completed their work. In that condition he heard the robbers blow open the safe and crack the doors leading to secret closets.

After the robbers had completed their work the gang left the town quite as mysteriously as they had entered it. In their kit, which was left behind, was found a small quantity of nitroglycerine, a monkey wrench and a piece of soap. Two firemen, who are kept on the nursery premises, awoke about 3 o'clock, and went out to find Satoniski. After wandering about more than an hour, the firemen, George Gresfinburg and Taylor Gumphrey, discovered the watchman in the greenhouse, breathing heavily and nearly exhausted.

Gumphrey ran quickly to the home of Jacob Eisele, president of the company, whose house is not far distant from the scene of the robbery. With the aid of the chief of police, and a squad of his men, Mr. Eisele made a careful examination of the place. From the safe it was said that about $75 had been taken, and many valuable papers were destroyed.

FALMOUTH, MASS.—H. V. Lawrence's new seed store and greenhouses have been opened for business.

Dreer's Novelties in Hardy Perennials

New or Little Known Varieties Worthy of Special Attention.

LUPINUS POLYPHYLLUS ROSEUS.

Anchusa Italica Dropmore Variety. A grand improvement on the type, with intense deep blue flowers, $2.00 per doz.; $15.00 per 100.

Anthericum Liliastrum Giganteum. A giant form of the N. Bruno Lily with very large white flowers, $2.50 per doz.; $20.00 per 100.

Aquilegia Helenæ. One of the best of the Columbines, large pretty blue flowers, with large white corolla, 85 cts. per doz.; $6.00 per 100.

Campanula Persicifolia Humosa. A very large semi-double form of the peach leaved Campanula, flowers of a pleasing shade of blue, $1.50 per doz.; $10.00 per 100.

Delphinium Gold Medal Hybrids. The finest strain ever offered in mixed varieties, $1.25 per doz.; $8.00 per 100.

Delphinium Belladonna. The freest flowering of all Delphiniums, it is never out of bloom, beautiful turquoise blue, $2.00 per doz; $15.00 per 100.

Funkia Robusta Elegans Variegata. A decided improvement on all variegated forms, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Gem. A new variety that originated on our trial grounds. Flowers old gold, suffused with bright terra cotta, changing as they mature to a wallflower-red, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Beauty. Another variety which originated with us, quite distinct in color, which is lemon-yellow, with a large disc of purplish-black, $1.50 per doz.; $10.00 per 100.

Helianthus Sparsifolius. The most desirable of all the hardy sunflowers, especially valuable as a cut flower, 85 cts. per doz.; $6.00 per 100.

Four Valuable Hemerocallis. The four varieties here offered are great improvements upon the well-known Yellow Day Lilies.

Aurantiaca. Very large, bright, orange-yellow, sweet-scented flowers, 15 cts. each; $1.50 per doz.

Aurantiaca Major. Large trumpet-shaped, sweet-scented, deep orange flowers. Requires protection, 35 cts. each; $3.50 per doz.

Florham. Large golden-yellow sweet-scented flowers; very free flowering, 15 cts. each; $1.50 per doz.; $10.00 per 100.

Gold Dust. Large golden-yellow flowers, 15 cts. each; $1.50 per doz.

Incarvillea Delavayi. Popularly known as the hardy Gloxinia; extra strong roots. $2.00 per doz.; $15.00 per 100.

Iris Pallida Dalmatica Folia Variegata. A strikingly handsome variegated leaved form of this beautiful blue Iris, 35 cts. each; $3.50 per doz.

Gypsophila Paniculata Flore Plena. This is a perfect gem and as a summer cut-flower invaluable. We have a large stock of strong roots to offer this season, $2.00 per doz.; $15.00 per 100.

Lupinus Polyphyllus Roseus. This is a most attractive rosy pink form of Lupinus, producing gigantic spikes of flowers, $2.00 per doz.; $15.00 per 100.

Pentstemon Gentianoides Sensation. Gloxinia-like flowers in a variety of bright colors, including rose, cherry, crimson, purple, lilac, etc. For bedding they rival Phloxes, Petunias, etc. Not quite hardy, 3-inch pots, $1.00 per doz.; $7.00 per 100.

Primula Cortusoides Sieboldi. These are not so well known as they deserve; they are of free, vigorous growth, and can be flowered in pots in early spring, and respond quickly to forcing when placed in a temperature of 50 degrees, forming pretty pot plants in a short time, making excellent window plants, which meet with ready sale when in bloom.

We offer six distinct varieties, from pure white to the deepest rose in color, $1.50 per doz.; $10.00 per 100.

Rudbeckia Rays of Gold. In this new variety we have a refined form of the popular "Golden Glow," with which it is identical in color, habit, etc., but the flowers have narrower petals, full to the center, forming a perfect ball of gold. $1.50 per doz.; $10.00 per 100.

Stokesia Cyanea Alba. A white form of the popular blue Stokesia, equally valuable and a desirable addition; strong plants, $1.25 per doz.; $8.00 per 100.

Choice New Trollius. (New Globe Flowers.) The five varieties listed below are decided improvements on all sorts heretofore offered; of exceptional large size and good rich colors.

Gotterfunke. Large open orange-yellow flowers.

Helios. Very free flowering, pure yellow, on strong branched stems.

Leuchtkugel. One of the finest deep orange reds.

Lichtball. Large, globular orange-yellow flowers on stiff stems.

Salamander. Soft orange-colored flowers of globular form.

35 cts. each; $3.50 per doz. The set of 5 for $1.50.

HENRY A. DREER, 714 Chestnut Street, Philadelphia, Pa.

Grafted Brides

Bench Plants, 2-years old
$40.00 per 1000
——Very Fine Stock——

Bassett & Washburn,

76 Wabash Ave., CHICAGO.
Greenhouses, Hinsdale, Ill.

New Orleans.

The Easter trade here was very heavy this year; in fact the retailers had their hands full in filling their orders. Although the flowers here were plentiful we had to draw heavily on Chicago, principally for carnations, tulips and lilies.

The Horticultural Society will take its outing to Rose Villa some time next month.

T. A. Despommier, Jr., was married to Miss Maud Bradley April 14.

C. W. Eichling says he is well pleased with Easter.

U. J. Virgin did a very heavy trade for Easter.

A. Alost of Rose Villa sold about 15,000 roses.

Jas. A. Newsham reports a fine sale of lilies. D.

San Francisco.

The Easter trade here differed a little from that of last year. The sales were about the same in value but the prices were lower and more stock was sold. The supply of plants was good and there were some left over; there were also more than enough cut flowers. Easter lilies were in great demand, also rambler roses, but spireas and azaleas hung fire a little. Owing to the scattered condition of the trade in this city now some had more than they could attend to; others did only fairly well. P.

Louisville.

TRADE GOOD.

Business conditions the past week were about as good as could have been expected. There were plenty of roses of good quality which had a fair demand. Carnations were very good in quality and supply and the demand was very satisfactory. Lilies, lily of the valley, violets, etc., have a fair demand and are in good supply. Green goods with the exception of fancy ferns are in good supply and have a satisfactory demand.

F. L. S.

BURLINGTON, IA.—Bock's greenhouses were badly damaged by fire April 9.

DALLAS, TEX.—Chas. Watson, rose grower for the Green Floral & Nursery Co., lost his life by drowning, April 6.

CEDARVILLE, N. J.—Wm. H. Henderson died April 1 at the age of 68. He was well known as an excellent chrysanthemum grower.

PHOENIX, ARIZ.—The Maricopa County Nursery says there was no comparison with last year's sales, this season's being 75 per cent greater with better prices and not enough stock to go around.

HIGHLAND PARK, MICH.—The establishment of Frank Holznagle was so threatened with destruction by wind April 7 that it was necessary to anchor the building at 2570 Woodward avenue with wire ropes.

MARY TOLMAN

A New Light Salmon Pink Carnation.

Of a somewhat warmer tone than Enchantress, and does not fade on the edge of the petals, having a clear, even shade all over the flower, which measures from 3 to 3½-inches, although 4-inch flowers are very common. The stem is long and stiff, holding the flower perfectly erect. The calyx is very strong, and as a producer, it comes early, is very free and continuous.

Orders booked now for January 1910 delivery.

$12.00 per 100; $100.00 per 1000.

CHICAGO CARNATION CO., Joliet, Ill.

A. E. HUNT & CO., Evanston, Ill. HUNT BROS., Park Ridge, Ill.

Sangamo

Is the new, brilliant, glistening **PINK CARNATION** shown at Indianapolis, and awarded the A. C. S. Certificate of Merit, attracting the attention of every carnation grower on account of its very pleasing color, long stiff stem and well formed flowers, measuring 3 to 3½ inches. The calyx is strong, and as a producer it cannot be excelled. Orders booked now for January, 1910, delivery.

$12.00 per 100; $1000.00 per 1000.

Grown and disseminated jointly.

A. C. BROWN, Springfield, Ill. **CHICAGO CARNATION CO. Joliet, Ill.**

CONQUEST

A NEW SEEDLING CARNATION

To be disseminated next season. This is a variety that florists have been wanting ever since they discarded Prosperity.

Conquest is a light flesh pink, overlaid with a deep rose pink, the color extending over the petals from the center almost to the edge. It does not fade, making it a most beautiful and attractive flower. Its habit is somewhat on the order of Lawson, although the stem is somewhat longer and very stiff. The flowers are well filled and nicely formed, which add to its attractiveness. Without a doubt, it will be the most attractive as well as the most profitable variety to be disseminated the coming season.

Orders booked now for January 1st, 1910 delivery.
$12.00 per 100; $100.00 per 1000.

Washington.

A BUSY WEEK.

The past week was an exceptionally busy one. Large evening gatherings, many teas, and several notable weddings being the chief events. Those who had specimen plants left over from Easter, readily disposed of them this week. Violets are getting poorer, by degrees. The market is being overstocked with carnations, and many are having special sales of them at 35 and 50 cents per dozen. The retailers are making good use of the apple, cherry, and plum blossoms, which are so effective in decorations.

NOTES.

Geo. Comly was obliged to remove most of his stock from his store on Wisconsin avenue, during Easter week, owing to the sale of the property. He has arranged temporary quarters on M street until the building is reconstructed.

"Better late than never" exclaimed Ellaby of Riverdale when he brought a wagonload of handsome single jonquils to town last Saturday, he had no competitors and disposed of them easily.

Charlie Davis isn't saying much, but he is producing as nice a lot of cowslips as can be secured anywhere in the country. The Pennock-Meehan Co. is disposing of his entire output.

Leonard Graner has successfully grown forget-me-nots and English daisies in pans which are in great demand; he will also have a good crop of early sweet peas.

Deeble & Merritt have formed a partnership, and they expect to keep the city supplied with green goods such as ferns and outdoor decorative material.

Harry Lee is devoting most of his time to the culture of maidenhair ferns; at present he is bringing in quantities of spring flowers.

Geo. C. Shaffer claims he sold 35,000 violets during Easter; he also executed the decorations for the Fitch-Gerhard wedding.

Lloyd Jenkins, who ventured into the growing business last year, claims he is well satisfied with the results so far.

Marche & Co. report a busy week.

Visitor:—W. Smith representing the Boas Paper Box Co. of Philadelphia.

G. S.

Montreal.

COLD WEATHER AT EASTER.

Easter trade was satisfactory, an increase of from 15 to 20 per cent being recorded throughout. Prices for plants were about the same as last year but some fancy prices were paid for made-up baskets. Cut flowers were scarce and prices higher. The supply of plants was about equal to demand except in lilies. Hydrangeas, azaleas and rambler roses sold best after lilies. Delivery was considerably handicapped by the severe weather it being around 10° of frost the last three days before Easter.

NOTES.

Prof. W. Lochhead of MacDonald College gave a lecture on "Fungus Diseases and Their Control" before the Gardeners' and Florists' Club, D. Weir who was to have given the lecture being unable to do so through other business. Prof. Lochhead explained at great length the different classes of fungus, their life and propagation, the prevention and destruction. Bordeaux mixture was recommended in general for all, formula 4. 4. 40. four pounds lime, four pounds blue stone, 40 gallons of water.

President Wm. F. Gude, of the chamber of commerce and J. Henry Small, Jr., president of the board of trade, are members of the committees having in charge the preparations for the Taft dinner early in May. The latter's ceaseless energy and the great amount of work carried on under his direction for the inaugural ball have largely contributed to the precarious condition of his health of late.

W. Pascoe, president of the Gardeners' and Florists' Club has left his position with R. Reford where he had been for the last 18 years and taken a situation with M. B. Davis, corner Peel and Pine avenue. This is a new place and Mr. Pascoe is given a free hand to lay out the ground, build conservatory, forcing house, vinery, etc., and make it one of the finest private gardens around town.

It is greatly regretted that there will be no chrysanthemum show this year, but the gardeners themselves are to blame; there was very little disposition shown to grow stock for a show and much less to work for it.

P. McKenna & Son are building two houses this summer 24x100 feet for plants in general their business demanding a larger supply of well grown plants.

Several florists will have automobile delivery vans this summer. LUCK.

SPRINGFIELD, MASS.—H. S. Hyde is having a greenhouse built on Brush Hill.

MILWAUKEE, WIS.—Benjamin Gregory will erect a boat house on the river between Chambers and Locust streets.

GRAND FORKS, N. D.—Trade was about the same as last year, with F. V. Kent & Co. with cut flowers selling at higher prices. Much pickled stock found its way here.

LITTLE ROCK, ARK.—Tipton & Hurst say they sold 50 per cent more stock and could have sold more had it been at command. Easter lilies were in great demand as plants and carnations, roses and lilies as cut flowers.

ATLANTIC, IA.—The Atlantic Greenhouses report a 25 per cent increase in sales with prices about the same. All plants sold out clean and most of the cut flowers except bulb stock.

FALL RIVER, MASS.—A 15 per cent increase is the report of Chatterton Warburton. Prices were higher in the case of pink flowers. Lilies and bulb stock were short but there was plenty of everything else. Plant trade is greatly on the increase.

WASHINGTON, D. C.—Gude Bros. report a 10 per cent increase in sales with a good supply in all lines. Lilies, azaleas, roses and spireas were the best sellers. Although the force here was increased more than double, it was quite insufficient to wait on the customers.

BALDWINVILLE, MASS.—T. J. Symons is building a greenhouse on the Otter River road.

BUFFALO, N. Y.—Superintendent Seymour, of the parks department, is asking for an appropriation of $10,000 for a new greenhouse in Delaware park.

ORANGE, N. J.—F. C. Read's store was broken into by boys April 11. The store was disarranged and some small change taken but nothing of any great value.

JOHNSTOWN, PA.—Wm. Schmidt made an extra fine Easter show in his new store at 120 Franklin street as well as in the old store at 200. All his stock was home grown.

BALTIMORE, MD.—Philip August Albrecht, of Lauraville, died at the age of 63 at his home, April 10. Mr. Albrecht had long been interested in horticulture, especially in greenhouse aquatics.

DUBUQUE, IA.—There is a movement to locate a horticultural vacation school or camp here on park grounds, with local and eastern educators and lecturers at the head. Three acres of ground on a beautiful high spot (300 foot elevation) within a stone's throw of the river have been secured for camping, tents, etc., planning for permanent buildings to go up to make it a permanent affair. Young florists will be invited to camp with us this summer and we expect to open June 21-28.—H.

HEADQUARTERS FOR

ARAUCARIAS

"By jingo," was the remark of a bright looking gentleman as he stepped with his lady friend into one of our Araucaria houses. "If these are not the best shaped and finest looking specimens of **Araucaria Robusta Compacta, Glauca** and **Excelsa** I have ever seen *then I am a shade.* ☞ Just look! What a sight this time of the year, one as nice as the other!"

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century that our name, as well as the Araucaria itself, shall never die out and is still fresh in people's minds same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen. As big as an elephant, for 75c; as big as a jumbo for $1.00; and as big as a holy terror, for $1 25 to $1.50.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3 00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants 6-7 8 in. pots, 4-5 year old, 4 5-6 tiers 20-25-30-32 in high, same in width, $1.50 $1.75, $2.00, $2 50 to $3 00 each.

Araucaria Excelsa, 3-4-5 year old 4-5-6 7 tiers 6-in. pots 20-25 30-35 in high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

Write today for circular and estimates. We guarantee satisfaction.

THE ADVANCE CO.
RICHMOND, IND.

Cleveland.

TRADE DULL.

The past week has been rather a dull one, the contrast being noticeable in every respect. This week the weather conditions were much more favorable; flowers were plentiful, but sales slow up to Friday, when business again looked up. Carnations sold as low as $15 per 1,000 for good stock. Bride and Bridesmaid roses sold for $15 and up per 1,000. American Beauty had a good run. Sweet Peas had a good sale at good prices for best stock. Lily of the valley was scarce and the demand good. Lilies were plentiful, but not much in demand. One local wholesale house sent out postals on Thursday saying Friday was bargain day, and offered roses at $15 per 1,000 and up, good for Saturday and Sunday trade.

NOTES.

Kirchner Bros. had a runaway the Saturday before Easter. A team of horses attached to a wagon loaded with plants started for home while making a delivery, but, besides a few bruises to both horses and wagon, no damage was done. The plants were thoroughly just outside of the city.

Wm. Brinker reports business in the seed line as excellent this spring, lawn seed and seed potatoes having a big call. He has also good orders for trees to be planted; these are going to the summer homes of business men shaken up, but not broken. C. F. B.

Dayton, O.

Concerning the Easter review of trade in this section, the writer can proudly say that from a business standpoint it was very good and quite ahead of previous years. Many good ideas can be gained each year with one's own experience. The one who grows the best has the least trouble in selling and satisfying. The call this season was for the well grown lilies, and there was enough for all who desired them. The lilacs and spireas are not so popular for various reasons. The lilac bloom is so short-lived and perishable, and for that reason is unsatisfactory and disappointing. The spirea is also a plant that with the slightest neglect withers and dries up. We must have a few, but the lilacs, tulips and daffodils are like the excursion ticket, "good for this day only." We learned, however, from former years' experience that good bulbs of hyacinths, tulips and daffodils can be planted in December in this locality. The weather will dictate how deep to cover them (have your protection convenient, of course), and you can have good, stocky plants just the time you want them. Most people plant too early and cover too deeply.

NOTES.

The National Cash Register Co.'s greenhouses are being operated by only one man. They have given up most of the landscaping and floricultural work, where they used to employ hundreds of men.

The weather here is all that could be asked, although Easter week was a variation of snow, ice and rain. Peonies will hardly make it for Memorial day in this section owing to the late cold weather.

The new street railway passing the retail establishment of Matthews the Florist is a great convenience and brings many new customers, while the improvement adds to the value of the property.

J. Bartholomew reports a good shipping trade and says that Kaiserin rose does as well with him in winter as in summer.

The city parks are beginning to be a blaze of bloom with tulips and hyacinths. M.

and are dealers in **Glassware, pottery, Decorative Greens and all Florists' Requisites.**

PHILADELPHIA, PA.—About 20,000 people it is estimated visited Horticultural Hall, Fairmount park, on the Saturday previous and Easter day to see the splendid spring show of flowers.

MILLBROOK, N. Y.—Frank Sealey who for a number of years has been at the Daheim greenhouses has severed his connection there and taken a position with Miss C. A. Bliss of New Canaan, Conn.

PITTSBURG, PA.—Nicholas Kremer, a gardener, 58 years old, died April 8 after an illness of one week. He was born in Lorraine, and came to this city 35 years ago. He is survived by his widow and four sons.

LONG BRANCH, N. J.—W. G. Eisele has completed his new 60x150-foot steel greenhouse and the King Construction Co., who has had the work in hand, is to be congratulated on the rapidity with which the house has been built. A hot water apparatus has been installed.

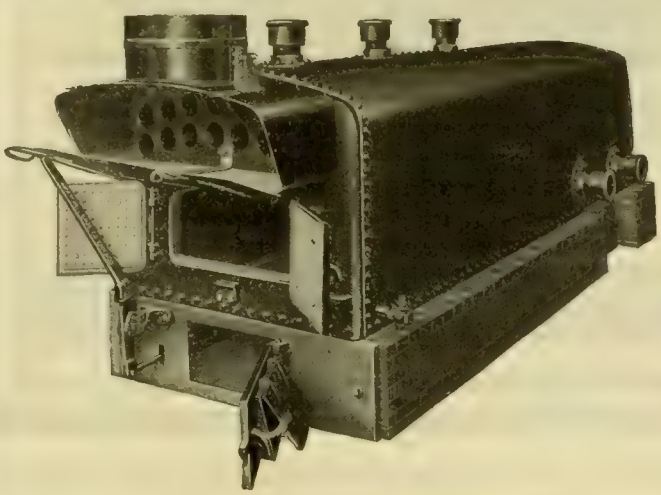
Kroeschell Boiler

Installed to heat over 6,000,000 (six million) sq. ft. of glass during the past three years.



Expressions From The Men Who Know:

THE BOILER AND PIPING SYSTEM, I CAN SAY, IS PERFECT IN EVERY WAY. With the Generator **I can keep low temperatures,** or can get the pipes **so hot we cannot touch them.** In less than twenty minutes all houses are thoroughly and equally heated, no matter how many coils are turned on, and all this is due to the Generator, which costs only $35.00

I feel that **no hot water system should be without a Kroeschell Generator.** Yours truly,

RUDOLPH NAGEL, Lancaster, Pa.

We had no trouble whatever in keeping the required temperature during the recent cold spell **with thermometer at 12 degrees below zero.**

We are glad of the opportunity to **recommend your Generator, Boiler** and **piping plans** to our fellow florists, knowing that when placed as directed they **will give perfect satisfaction. We did our own piping,** and none of us had ever had any experience in that line before. Hoping this will be of some benefit to you, and thanking you for past kindness, we remain,

Very truly yours

NORTH FLORAL COMPANY, Fort Dodge, Ia.

Better, Cheaper than Cast Iron.

1346 Cast Iron Boilers were replaced by "THE KROESCHELL" in 1904, 1905, 1906, 1907,

SEND FOR CATALOGUE

KROESCHELL BROS. CO., 45 Erie St., Chicago

LOUISVILLE, KY.—Mrs. M. D. Riemers has found the Easter plant trade very satisfactory and intends to go into it more largely next season.

INDIANAPOLIS, IND.—Sales at Easter did not quite come up to those of last year and the prices were not quite as good. Plants were in over supply and violets were the only short item in cut flowers.

GALESBURG, ILL.—A 20 per cent increase in sales around the recent Easter at prices about the same as last season is the report of H. F. Drury. There were not enough carnations of good quality and all plants, especially lilies, sold well.

MONCTON, N. B.—The Sunnyside Greenhouses report an increase of 10 per cent in the recent Easter sales, with plenty of stock in all lines except American Beauty roses. The best class of roses and carnations sold well but daffodils and other bulb stock were not wanted. Nearly all plants sold well.

WORCESTER, MASS.—A 25 per cent increase in sales at considerably higher prices was reported after Easter by the Worcester Conservatories, with plenty of all classes of stock. Azaleas, cyclamens and rambler roses sold best in pot plants, while in cut flowers roses, carnations, violets and primroses were ahead. The cut here from 30,000 carnation plants for six days was 27,000, from 8,000 rose plants about 16,000.

BANGOR, ME.—Adam Sekinger reports a 20 per cent increase in sales at Easter over those of last year, at better prices. Roses in pots were scarce but there was a good supply of lilies. Carnations had the least sale and there were not enough violets. The churches all decorated more or less and lilies are greatly in demand. The best plants of rambler roses are also needed, but there is little demand for small stock.

20 Years in Service

MOREHEAD

Return Steam Traps

COUNCIL BLUFFS, IA.—The L. Lainson greenhouses at 1309 Canning street were damaged to the amount of $75 by a whirlwind which swept that part of the city.

SPRINGFIELD, MASS.—Adolph Miellez, aged 74, widely known as a floriculturist, was almost instantly killed in West Springfield April 13 by falling from his wagon, a broken neck resulting.

SIOUX FALLS, N. D.—M. M. Strong reports a 10 per cent increase in Easter sales over those of last year. Cut flowers were scarce but more plants could have been sold. Most bulbous stock sold well.

HOBOKEN, N. J.—L. Hanley reports a very encouraging Easter trade, cash sales being 50 per cent higher than those of last year at similar prices. There was plenty of all classes of stock except small azaleas and large lilies. Rhododendrons did not get a good call but other pot plants sold well, also all choice cut flowers. Very small plants, retailing for less than 50 cents, were not needed.

LINCOLN, NEB.—C. H. Frey reports a 20 per cent increase in Easter sales over those of last season, with higher prices on lilies. There was plenty of choice stock in all lines. All flowering plants sold well and there was a great demand for all choice cut flowers. The weather was bad, being very cold, and on Saturday the wind blew a gale, carrying with it clouds of dust, but everyone had more business than could be properly handled; people began to buy early, beginning on Monday.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.

MASTICA

FOR Greenhouse Glazing

USE IT NOW.

F. O. PIERCE CO.

12 W. BROADWAY

NEW YORK

MASTICA is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass, as occurs with putty. LASTS LONGER THAN PUTTY. Easy to apply.

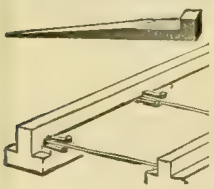
THE BEST WAY

to collect an account is to place it with the

National Florists' Board of Trade

56 Pine Street, NEW YORK,

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.



Siebert's Zinc Glazing Points.

Good for small or large glass, do not rust, easy to drive 5/8 and 7/8 inch. Per lb. 40c. 5-lbs. $1.85. 20-lbs. $7.00.

VAUGHAN'S SEED STORE, Chicago or New York.

Calgary, Alta.

The Easter trade in this city has been all that could be expected and a considerable quantity of stock has been sold. There was a scarcity of good cut flowers of all kinds and consequently prices were high. Lilies brought $4 per dozen and roses run from $2.50 to $5. Carnations brought up to $3 per dozen and violets 50 cents per bunch of about a dozen and a half. Big prices are asked here for plants, a good Easter lily with six blooms and buds selling for $2.50. Cinerarias with a nice head of bloom brought $1 and spireas up to $1.50 each. The weather is ideal; in the past month we have had some sunshine every day and generally all day long. The nights are cold but during the day it warms up nicely although there is generally some wind blowing.

A. M. Terrille & Co. are going to build four new houses this year, about 25,000 feet, out at East Calgary. This will be the commencement of a place which it is expected will grow to considerable proportions within the next few years. Their present place, which is in the center of the city and of about 20,000 feet, has been found quite inadequate to supply the ever growing demand and, as there is no room there to expand, it was decided to start a new place further out and in a year or two close up the old place. L.

Are positively the best. Over 30,000 pounds now in use. A sure preventative of glass slipping. Effective on large or small glass. Easy to drive. Easy to extract. Two sizes 5/8 and 7/8, 40c per lb., by mail 16c extra; 7 lbs. for $2.50 15 lbs. for $5.00 by express. For sale by the trade

RANDOLPH & McCLEMENTS, Successors to Chas. T. Siebert, Baum & Beatty Sts., Pittsburg.

Albany, N. Y.

A reckoning of the accounts of Easter sales for the season of 1909 shows that among the local trade the aggregate is better than that of 1908. In amount the percentage varies with the different dealers, but it may be conservatively stated to be about 20 per cent. The rate varies from 10 to 25 per cent in one or more cases. In the matter of prices the trade reports that the scale was the same as that of last year. Exceptions are so few as not to be worth mentioning. The supply of everything was fully equal to the demand. One or two dealers report that they could have sold more orchids had they exercised the forethought to have them on hand, but orchids are not an important item in the total aggregate at Easter. No complaint has been mentioned in respect to the supply of cut flowers; any dealer could have obtained all he needed from his grower with whom he had placed his orders consistently for the year. The public expressed its preference in the largest measure for azaleas among flowering plants. Lilies came about second, hydrangeas third and bulbous stock at about the close of the list. In cut flowers violets were far in the lead. The number sold in this city was very large. Dealers consulted reported sales of 60,000, 49,500 and 38,500 respectively during the three last days of the week preceding Easter Sunday. The supply was fully equal to the demand and the quality excellent. Next to violets there was a strong demand for roses, Killarney being a popular favorite. Next in order came sweet peas and orchids. Bulbous flowers and spireas were at about the foot of the list. Christmas is gradually supplanting Easter in this section as the time for the sale of the largest number of flowers. It would be difficult for an ordinary observer to note this trend of public taste because the demand for plants and flowers was so great that beginning on Thursday morning the retailers and their clerks had practically no time to sleep until far into Sunday afternoon, when the last plant or bunch of violets was delivered to an impatient customer by a drowsy messenger who felt great relief that Easter, 1909, was no more.

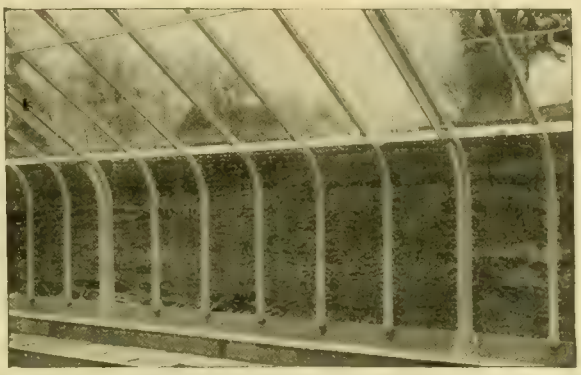
The New Curved Eave House

You Can't Beat It for Beauty of Design in Its Every Detail.



What Lighter Could You Want Than This? Just Note What a Fine Piece of Workmanship It Is at Every Point.

Any Way You Look at It, You Can't Help Being Impressed with Its Attractiveness and Practicability.

You will like our way of doing it. We retain all the strong structural features of our Flat Rafter house, without columns for supporting the roof, and simply change the detail at the eaves. In doing this, however, we have in no way weakened the house at that point, but have increased its lightness, and a good many say it is a more attractive looking house.

There is one thing certain, we have a Curved Eave House that is not so high priced as to make you unhappy.

We have a special way of constructing the eave which we want to tell you about. We will explain it fully in replying to your letter.

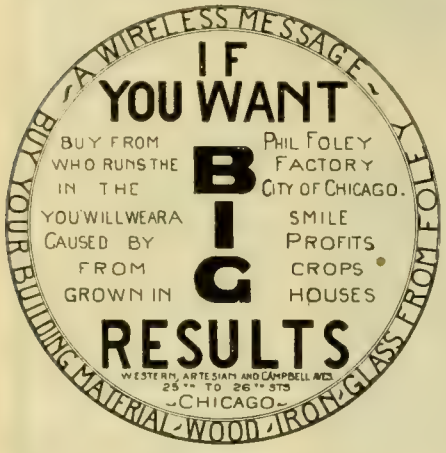
76-78 Wabash Ave., CHICAGO



Omaha, Neb.

Business for the last four weeks was good and Easter week was the best we ever had. The retailers made magnificent window displays. The lilies were good this year, especially those from Bermuda bulbs; most lilies sold for 25 cents per bloom. One department store advertised lilies for 15 cents per bloom, and good lilies at that, but it did not hurt, as all sold. Azaleas, bougainvilleas, lilacs, stocks, cinerarias and primulas sold readily at good prices. Bulbous stock was plentiful and some thought there was too much, but by noon on Sunday very little surplus could be seen of anything. Roses and carnations were of good quality but not over plentiful and therefore commanded a good price, especially American Beauty. Violets were scarce and poor, still they sold for $2 per 100. Sweet peas were plentiful and brought $1.50 to $2 per 100. More cut lilies were sold this year than any previous year. Out-of-town orders were very heavy and some had to be turned down. The weather man was not extra good; we had raw, windy weather, which made it very hard for delivery. This has been the coolest spring we ever had and helped to keep the stock in good condition.

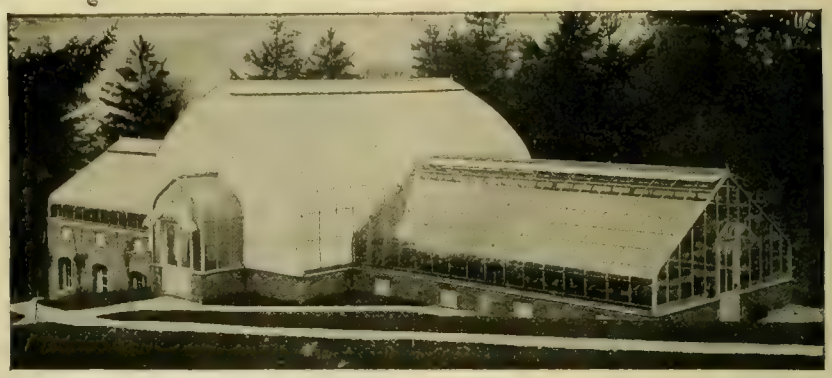
NOTES.

Hess & Swoboda are about to erect three greenhouses 25x200 feet each, using Garland gutters, iron posts and all the latest improvements, such as dirt conveyor. Their heating capacity will be increased by a 125 h. p. boiler, which will give them 500 h. p. in all.

Paul B. Floth is getting better and will be able to be about soon.

GRIPPE.

PUEBLO, COLO.—G. Fleischer says his business at the recent Easter was about the same as a year ago. All plants except lilies were plentiful and there were more cut flowers than were needed. Boxes of cut flowers for Easter presents and Easter baskets were in smaller demand than usual and church decorations were very limited.



THEY HAVE WIDE GLASS

and wide glass means more light—and more light means better plants, better blooms. The catalog tells why they are the lightest, simplest, strongest, most durable, most attractive and productive houses built, and cost less to maintain.

The ideal construction for private estates, parks, public institutions and florists' showrooms.

JOHN C. MONINGER CO.

CHICAGO

113 E. Blackhawk Street.

MT. STERLING, KY.—Graser & Humphreys had a very profitable Easter business with substantial increase of sales over last season.

VICTORIA, B. C.—The Fairview Esquimalt Greenhouses, Ltd., F. Francis, manager, 1120 Government street, will build two houses 205 feet long by 136 feet wide of glass, purchased in England, which is 24 inches square and 1⅛ inches thick.

FREDERICTON, N. B.—John Bebbington & Son enjoyed a larger Easter trade than ever before, considerable funeral work coming along at the same time. Plants and cut flowers were equal to the demand, azaleas not selling quite as well as usual. The new yellow hyacinths were very popular, also good tulips in pots and pans. Violets, roses, carnations and lily of the valley were mostly demanded in cut flowers.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the everyday florist is called upon to perform,

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue as otherwise they may miss some of this high grade work.

Lawn Vases and Window Boxes.

An Interesting and Remunerative Branch of the Trade to be Prepared for Now.

Various Styles of Window Boxes.

It matters little whether the retailer has boxes to fill with the choicest of foliage plants or with only a few geraniums, marguerites and cheap vines, the work always pays well and almost universally gives satisfaction to customers. It is a most interesting branch of the business and one that retailers should lay themselves out to secure. In the fashionable districts of New York, Boston and other eastern cities, also in the rising cities of the west, very large sums are spent annually by persons of means and refinement who like to see their windows bright and home-like, and nothing predisposes anyone more in favor of a neighborhood than good, well-kept window boxes. This being so, retail florists and growers should get after this business by showing a well-filled window box or two in the store, and even by a system of canvassing, either personally or by circular, those people in neighborhoods where such canvassing is likely to be successful.

The illustrations in this issue show a number of windows treated in various styles, some, of course, too elaborate for retailers in middle-class localities; others that may be arranged at a price to suit almost every purse. The palms, pandanus, Ficus pandurata, choice dracænas and kindred plants, for instance, used in the window boxes shown in one of the New York pictures undoubtedly make a splendid show. They are perfect for a fine display in the houses of the richer patrons of the florist, while they may be frequently changed and a continuous show kept up. But they mean a lot of money to keep going, consequently are out of the reach of persons of moderate means. These usually need something attractive that will keep on flowering all through the season with the one filling and due attention to the needs of the plants. A very simple and yet effective box for such cases may be planted to green or variegated vincas, S. A. Nutt geraniums and white marguerites. This will be pretty when planted, and all three varieties will go on and improve in appearance all the summer if well looked after by watering and feeding, as these are necessary. The pretty pink Geranium Jean Viaud, with vines of Thunbergia alata, is another pretty combination for a cheap small box, and a few dwarf blue lobelias may be added with advantage. There are many other ways of planting and room for much ingenuity on the part of the planter even though he be cut down in price for the work to a rather low level.

The Boxes and Soil.

The shape of the boxes and their size is a matter of small importance. They have, of course, to be fitted to the windows and, in some instances, as shown in one of the illustrations, may have to be kept low in order that the view is not blocked or window signs hidden. This, however, is a matter for consideration under individual circumstances and it is only necessary here to say that no matter in what way they are fixed they must be made so secure that they will not be displaced by wind. As a rule they should not be less than nine inches deep, this allowing for good drainage and an inch between the surface of the soil and the rim of the box. About the shape or the class of wood used we need not trouble much, as we hope to soon hide all this with a profusion of vines. Of course, a good lasting wood such as cypress or oak is preferable to common deal in that the boxes will not have to be so frequently renewed, and such boxes are cheaper in the end than the lower-priced article. Green paint seems to be as far as some people's ideas go in regard to color. We much prefer to see window boxes the color of the house or other building, and would always match this as nearly as possible, whether it was brick, stone, painted wood or concrete. Vines, like vincas, Senecio scandens, ampelopsis or cobea, look better over these dull colors than over green of various shades, for a bright green detracts from and a dull green does not add to their attractiveness.

Owing to their restricted size more care should be given to the soil in window boxes in which plants are expected

to do well. It is not enough to go out on a vacant lot and scrape up the soil needed to fill them, as is sometimes done. The plants may at first appear to be doing well; they may look green and flourishing and flower all right at first. But there is no body to it. Soon all the nature is washed out and no amount of after-feeding can take the place of a good soil. The roots have run through it rapidly, using up what little nutriment was there, and only the shell remains. Good, sound loam must be the basis of the compost, loam from rotted sod preferably. To this should be added at least one-fourth of old, well-dried cow manure and leaf mould in about equal parts, and if the soil from which the sod was cut is of a nature that runs closely together, a further addition of sharp sand or road grit should be made. This forms a mixture in which the roots of the plants will run comparatively slowly, but they will ramify freely, and when the whole bulk of soil is filled there will be a good ball of fine, hungry feeders that will take up moisture and food in solution to keep the plants in good shape all the season. The growth, too, in such a soil will be firm and of such a nature that any slight checks caused by cold, droughty winds or variations of temperature will not be felt.

Veranda Boxes in New York.

The illustrations show an elaborate arrangement of veranda boxes at the Plaza hotel, New York. These boxes are of an average length of 10 feet and are of terra-cotta, the monogram of the hotel being worked into the designs. In the plant work palms, ferns, Ficus pandurata, dracæna and other foliage plants were used. These were arranged under the supervision of Chas. Thorley, who has a store in the hotel.

Lawn Vases, Porch and Window Boxes.

A paper read by G. A. Heyne of Dubuque, Ia., before the annual meeting of the Society of Iowa Florists.

There are conditions in city gardens, or yards, that require the flower lover to devise means of protection to his flower pets; again there are positions that make it necessary to have his plants up off the surface of the ground, so as to be able to see and enjoy them, or prevent damage to them; also there may not be room to plant on the ground, so flowers can only be had in some receptacle. The multitude of these conditions have brought into use lawn vases, rustic boxes and stands, and porch and window boxes. To have these at their best, the construction of the vase or box, the mixture and condition of the soil, and plants must all be right, well chosen and planted; then proper care should be given them.

The boxes should be seven to nine inches wide, and about the same depth, inside measurement; made of wood or metal. Cypress is the best wood and galvanized iron the best metal. The drainage consists of ¾-inch holes every 12 inches in the bottom of the box. The boxes should be one inch shorter than the width of the window, to allow for air space on each end; for long porches, or windows of unusual width, it is better to make the boxes in two or more sections. Porch boxes should be two or three inches wider than window boxes on account of their drying out faster in the more open position in which they are usually placed. Before painting, the boxes should be charred inside; this consists of washing with kerosene on the inside, both bottom and sides; then lighted and left to burn until a thin charred coat is produced, after which it is turned over and smothered. This operation will add many years to the life of the box.

Before filling, the boxes should be fitted and proper fastenings provided. The proper color of paint is hard to give unless all the surrounding conditions are known; it is safe to use a deep green color, if plenty of vines are used in

VERANDA BOXES AT THE PLAZA HOTEL, NEW YORK.

planting. As stated before, good soil must be used; this can be made up as follows: Pasture sod chopped up, two bushels; rotted manure, one bushel; sandy garden soil, one bushel; bone meal, two quarts—these must be well mixed and made up in the fall for next season's use, if possible. The bottom of the box should receive the drainage material, consisting of broken pot-sherds; over this place a thin layer of moss or excelsior to prevent the soil washing out. The coarsest part of the soil is now put in, following with finer soil, until the box is two-thirds full; this will allow of deep planting.

Start with the vines along the front and place these, along with the roots, firmly packed in soil, as the continued movement by the wind is likely to loosen them, resulting in weak growths. In very exposed places it is well to have the boxes deeper to allow for this deep planting, also to give more protection to the roots. Next to the vines place the fillers, such as the Boston fern, or Asparagus Sprengeri; in the back, place the flowering plants. Geraniums are the most desirable for sunny positions; these should be of sturdy young growth and one variety should be used only, as a mixture of colors, unless well chosen, will only give a patchy effect. The dark red geranium is a favorite; scarlet looks well in certain places, while the light shades of pink are to be carefully tried, to avoid disappointment, especially on very dusty streets; for such positions use smooth-leaved plants as much as possible to prevent the dust sticking to leaves and if the boxes are so situated as not to be washed by rains, sprinkle them occasionally to keep them free from dust.

There are other plants that can be used if carefully matched as to color of leaves or flowers, such as achyranthes, coleus, alyssum, ageratum, petunias and cannas, the last of the dwarf sorts, as Express, Chabonne or Austria; also dracaena and Yucca aloifolia. Phormium tenax and the variegated form make excellent center plants for large rustic stands and vases. Agaves and aloes are suitable for very exposed places. In selecting lawn vases choose them of good size, say eight to 12 inches deep and not less than 16 inches in diameter. Rustic stands or boxes of wood should be charred, same as the window boxes, and should have a minimum depth of eight inches for plants to do well; also drainage must be provided as recommended for window boxes. Special care must be used in draining iron vases as some patterns are poorly equipped for drainage.

When the vases are small it is necessary to make the soil somewhat richer in composition if heavy vine growth is desired. Be careful to have the soil fully one inch below the top of vase or box. The last filling around plants should be of finer soil and must be well firmed—do not expect good results in loosely planted vases or boxes. If possible have them in some sheltered place where they can remain several days and where they will be protected from heavy rains, for until the roots have started well into the new soil, they must be sparingly watered and yet should never be allowed to dry hard. After a week or 10 days the plants will stand more watering, and after three weeks or a month the soil can be soaked daily in dry weather, if in a sunny position. From this time on fertilizer can be used; at first weak solutions of manure water or a light dusting of the dry material. Watering must be looked after at regular intervals and good results cannot be had with indifferent care. Also the old flowers and the dry leaves must be regularly removed and the vases must stand firm and level.

Regarding the different vines: the vincas, both the white edged and light green-leaved sorts, are the most useful and best growers. The variegated honeysuckle and Senecio scandens are other

vines for yellow and green effects of rapid growth and readily propagated. These vines will grow from four to eight feet long in a box eight inches deep. Where some climbing vines are desirable the cobæas, both the white and purple, will fill the bill; these can be trained up porch columns and windows. Madeira vines, planted in the back of boxes, can be trained to form a nice screen.

A Successful Lawn Vase.

SEE ILLUSTRATION PAGE 691.

The conventional urn or lawn vase is rarely a success. What ought to be an attractive feature is often a defect upon well-kept grounds. The reasons for this are four-fold: Plants in a metallic receptacle are apt to suffer from overheating of the roots and improper drainage. The former difficulty might be avoided by selecting a shady location and plants which thrive best therein.

Overcrowding is another cause of failure, and a fourth mistake is in the selection of inharmonious colors. Granted that tastes differ there can be no excuse for filling an urn with salmon or rose pink geraniums and flaming nasturtiums. Another instance of harmony not understood was a combination of crimson petunias and scarlet geraniums. Equally hideous color schemes constantly greet the critical eye.

Rustic work is rarely out of place—not the fussy shallow baskets peeled and varnished, which savor of the grotesque—but something simple and serviceable, like the structure which holds the magnificent growth shown in the illustration. A forked branch of a tree is the more artistic standard, but in the present instance it was convenient to utilize the stub of a maple tree. This supports a section of a lard barrel. Such barrels can be bought of any grocer for 75 cents. They are heavily stayed with bark-covered hoops. With the head replaced and the barrel sawed a couple of inches above the hoops we have two fine tubs. Holes bored in the bottom, near the edge, insure good drainage.

The entire structure is covered with Ampelopsis quinquefolia growing around the base of the stump, which is trained and pruned to its present outline, and allowed to re-drape itself with its own rich foliage. An inch or two of refuse from coal siftings in the bottom prevents the earth from clogging the vents for superfluous water. Given a rich soil and plenty of water with careful selection and arrangement of plants nature does the rest.

A dark-leaved canna stretches itself in the air, flanked on either side by a free-blooming, dwarf, yellow variety. A fine caladium solemnly waves its massive leaves between delicate pompon dahlias, which are highly effective among the red canna leaves. A footnote of yellow and red coleus completes a luxuriant picture.

W.

MARGUERITES AND GERANIUMS IN WINDOW BOXES.

THE RETAIL TRADE

BALTIMORE, MD.—John Cook reports a 20 per cent increase in his sales around Easter over those of a year ago, at about the same prices and with a good supply of all classes of stock. Hydrangeas, rambler roses and azaleas were most in demand in plants. American Beauty roses were not in so great demand as cut flowers as were lilies and other bulb stock, tea roses, orchids and gardenias.

AND now it is shoes—wire shoes trimmed with ivy leaves or leucothoe and containing vases filled with flowers—that are the thing for table decoration. Silk is sometimes used as a covering with a bow of tulle at the toe. The tallest flowers are used at the heel.

AT an eastern funeral a design representing a theater ticket with the words on the one side: "Right A1, At Rest, April 13"; on the other: "Heaven, Admit One," was used. While the florist has not always the say in this matter, this kind of lettering seems hardly in good taste and should not be encouraged.

Spray of Cycas Leaves.

SEE SUPPLEMENT WITH THIS ISSUE.

Although much used other ways cycas leaves are especially appropriate in the bolder, more effective funeral designs and in memorial wreaths for cemetery and other uses. Their bold, striking appearance is not their only good point; they last longer than almost any other description of decorative material and this is another argument in favor of their use in cemetery sprays. A spray of these leaves will last for weeks on a grave or monument while a wreath of flowers, no matter how costly or of what varieties, looks draggled and untidy in a few days. The cost of cycas leaves of good quality in sufficient numbers to make really bold and effective designs prohibits their use unless a good price can be obtained for the work but the satisfaction they always give to customers leads to repeat orders when once they have been tried. A well known retailer in Chicago always makes a trio of these splendid sprays for a customer just before Easter and Christmas every year, simply because they last so well and are attractive to the last.

Anywhere from $10 to $20 may easily be obtained for good sprays of cycas leaves, tied with purple ribbon or decorated with violets, lilies or other funeral flowers. Besides plain sprays, simply tied with bows of purple ribbon, many fine effects may be worked out with these leaves. A wreath of violets and

WINDOW BOXES KEPT LOW TO AVOID SIGNS IN WINDOW.

VINCAS AND GERANIUMS IN WINDOW BOXES AT PHILADELPHIA.

cycas leaves with a simple white tie is effective in small sizes but they are more suitable for the richer bolder effects. A wreath made recently for the funeral of a well known business man may well come into the latter category. A heavy loose wreath about five feet across had a rising bank of violets on the top, large enough to give a good effect. Interspersed with the violets, and softening their somewhat hard line, were graceful little plants of Cocos Weddelliana, the weeds surmounted with a high bow of rich purple ribbon. This was, without doubt, one of the finest funeral wreaths we have ever seen, not the least of its merits being its richness combined with a rare simplicity. Again, splendid results are often obtained by the use of cycas and croton leaves in combination and there are numberless ways in which they may be effectively combined with other foliage and flowers. Dealers in these leaves say their sale has fallen off considerably of late but it would be a misfortune to lose them from the list of florists' requisites.

SPOKANE WASH.—Hoyt Bros. Co. reports a 25 per cent increase in its recent Easter sales over those of last year, with prices the same and plenty of stock. Lilies in pots sold well, but azaleas not so well. Everything in cut flowers cleaned up. This firm's novelty baskets, of its own make, proved popular.

BURLINGTON, IA.—A local paper, dated April 13, has the following: "Jos. Bock, the Sunnyside florist, celebrated his sixty-third anniversary Saturday. He has been laboring with nature's beauties so long that nature has dealt kindly with him, for he doesn't look a day older than 50. His many friends extended congratulations."

THE CARNATION.

Indoor Summer Culture.

The young stock intended for growing indoors all summer should now receive attention to repotting or planting out. We prefer planting out on a bench to carrying them in pots. Now that the Easter season is over a bench or two can be dispensed with in the carnation houses, selecting those that are so situated to allow of thorough airing, with plenty of light and not too far away from the glass. Clean out the old soil and do any repairs necessary, then give the inside of the benches a thorough cleansing with lime wash the same as followed when planting permanently. Then follow this up by spreading a thin layer of well rotted cow manure over the bottom of the benches, enough only to cover over the cracks or about one inch thick, then on this put about three inches of very fine virgin soil which should be of a light texture but not sandy; no firming down is necessary. The young plants should then be planted about three inches apart each way planting firmly enough to hold the soil around the balls but allowing no pounding. After they are planted give a good watering in and after this the results from this method of culture will depend greatly upon the care that is bestowed upon them during the next two months.

One of the principal points to bear in mind and follow up closely is that of keeping the plants pinched back. They will grow very rapidly after the roots have well taken hold of the soil and will need going over every week to keep the shoots properly topped back. Do not water too freely; all that the plants require is enough to insure a healthy growth an over abundance causing a soft growth subject to disease of every description. A low temperature, the same as is carried for the other young stock, with plenty of fresh air, should also be the order. Young stock treated this way will make very fine plants for planting into their permanent quarters by June 15 and arrangements should be ready at that time for caring for them. If this cannot be done it is better to stick to field culture and not attempt growing them indoors all summer. The young stock for planting in the field should be given every care. When topping is necessary, keep it followed up closely, also maintain a cool fresh temperature and pay particular attention to the wants of the plants as regards watering and keep them clean of insects by frequent fumigation.

C. W. JOHNSON.

Carnation Soil.

ED. AMERICAN FLORIST:—

Is it advisable to leave the soil in the carnation benches for two seasons, or is this a poor method to follow? Fresh soil was placed in the benches last August, and in June, if the soil is thoroughly dried, the top layer removed and some bone meal or manure mixed with the remaining soil, could first class blooms be grown?

E. W.

Although fresh soil annually is usually recommended many growers produce first class cut flowers by the method "E. W." names. It all depends upon sufficient plant food being returned to the soil and its being kept in proper mechanical condition.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Water Lilies.

The demand for these as cut flowers is rapidly increasing and nothing has such a charming, cool appearance in hot summer weather as an arrangement of running water in the retail store with some of the flowers tastefully arranged. There is money in their culture if the extension of the business of those who have started in it may be taken as indicative of this, while there is no great skill called for, more depending upon proper care and carrying out the details at the proper time. Where there is no natural water a series of sunken tubs or concrete ponds are made and used successfully. The hardier kinds of nymphæa may be planted now, while the more tender varieties can be secured and started in the greenhouse to be planted out when the water has sufficiently warmed up outside.

Euphorbia Fulgens.

Small cuttings of new growth, cut with a heel from the old wood, root freely now in fine soil kept always moist over a moderate bottom heat. The bright red sprays of flowers, with the pretty bright green foliage, are excellent in winter for decoration and it will pay to grow a few. Where there are no young plants, place a few old ones in heat and they will soon send out suitable shoots for propagating. The bleeding of the sap can be stopped by dipping the cuttings into dry, fine soil before inserting in the cutting bench. This euphorbia likes a fairly warm, moist house and plenty of sunlight while growing, and will thrive well trained up under the glass in houses devoted to plant growing. Considerable care in watering in the earlier stages is necessary.

Stephanotis Floribunda.

The flowers of this fine old plant, that years ago was such a favorite, are occasionally seen and wherever they are offered they are always eagerly bought by discriminating purchasers. The flowers are not long enough in the stems to meet the needs of present day decorators in most classes of work, but they are elegant for sprays and for any class of made-up work. They would make a fine succession to bouvardias and, if the plants are correctly treated, they produce an immense quantity of flowers, a spray to every joint of the young growth. But in many cases the stephanotis has been treated as a stove plant only, to be grown in a very hot house when it really needs a very moderate temperature. For years we grew this stephanotis over the roof of a house devoted to maidenhair ferns for cutting and never had any trouble with it. The roots should be confined to pots or boxes, not planted out to ramble at will. In the latter case more growth than flowers will be produced, but if confined to pots and the soil rammed firmly into them a short jointed hard growth is produced that flowers freely. Where ferns are grown this plant could be trained thinly on the roof and the foliage would prove sufficient shade for the ferns at all times, while producing a crop of flowers for two or three months at least in summer. Frequent spraying with cold, clean water over the foliage helps to keep down mealy bug, its worst insect enemy, and will not injure even open flowers in the least, one very good point about the stephanotis. We are not advising the growth of large quantities of this flower to be placed on an unprepared market, but the retailer with his own glass and the fern grower could certainly use it to advantage.

Shrub Blossoms.

Lilacs, snowballs and other hardy shrubs are being more and more drawn on for cutting purposes and where they are grown especially for the purpose it is easy to get them in a week at least before the outdoor flowers are ready for use by cutting and placing the branches in water in a moderately warm and shaded house. The time to cut them is just as the flower buds are well formed and before they begin to open. The winds at this time of year are very rough on delicate flowers as they open and bruise them badly, but branches cut and placed in water this way are safe from injury. Plants of Hydrangea paniculata that have been forced should be planted out in good soil to make growth for a season or two, when they will be fine either for cutting in the open or for lifting and lightly forcing for cut flowers. The perfect hardiness of this and several other similar hydrangeas is not sufficiently recognized. They stand out in the most exposed positions far north in Canada, yet, unlike many hardy shrubs, will stand forcing equally well. Any retailer who has not grown this fine plant has neglected his opportunities. The weigelas again are useful for cutting, though not so good as the others. They grow best and flower most freely in a light, sandy soil. Branches of forsythia may now be cut from outdoors in many localities, but these may be hastened when necessary in the same way as lilacs. Some of the daphnes are beautiful and very sweetly scented and there are many others.

Some New York Window Boxes.

Swainsonas.

No more time must be lost before planting the swainsonas intended for summer flowering. Although the plants are of a loose, straggling habit and will take up a lot of room if allowed, they are better planted moderately close, as this will cause straighter and better stems. Of course, if planted extra close they would not thrive, but good plants put out at nine inches in the rows and one foot between the rows will about meet the case. Swainsonas grow freely and the soil must be good. Also, when they are well established, the roots must be kept moist. Where there are old plants that have been flowering these can now be cut back fairly hard and will soon start up again to grow and flower. A batch of cuttings should be put in as soon as they are ready and these can be grown on gently in a cool house, frame or plant protector and will make fine stock for winter blooming. At all times a cool, airy and comparatively dry house is best, as the plants are almost hardy and the flowers are of a nature that easily spots and disfigures with abundant moisture. The green fly is about the only insect pest that need be feared and this can usually be got rid of with one or two gentle fumigations with some of the nicotine preparations.

General Hints.

Because a bench is not wanted for another week or two is no reason for leaving it unprepared. If it is a wooden bench and violets have been grown on it, to be followed by chrysanthemums, for instance, get the old soil away and see to whatever repairs are necessary. This will save time when the chrysanthemums are ready for planting and the soil ready for filling. Soil for chrysanthemums, as generally used, is not of the best. Any old thing that happens to be around is pressed into service and the grower decides to use plenty of liquid manure later to make up the deficiency. But when we think of the amount of work the chrysanthemum has to do and the short time it has to be done in, then the need of a good sound compost becomes apparent. It is true the plant is easy to do and puts up with temporary inconveniences in the way of poor soil fairly well, but we all want to get as solid and full flowers as possible and here the advantage of a well prepared soil is evident. Flowers of good depth and texture cannot be grown in poor, trashy soil by the aid of liquid manure, so give the plants the best that can be obtained consistent with a profit on the transaction. The same thing applies to carnations, roses and other crops. Manures, liquid and otherwise, are excellent as aids to culture, but

they can never take the place of good soil. The care of the young rose stock is an important charge and a careful grower should be detailed to the work. Grafted plants will be getting heavy and likely to be knocked out when moving or spraying. See the plants are staked to prevent this. Weeds in the pots are great robbers, needing more to keep them going than the rose plants and attracting insects. Plenty of room is essential to this class of stock now or the foliage will suffer and fall later when planted on the benches. Now that the firing season is nearly over, cut out any badly mildewed shoots in the Bride and Bridesmaid benches and give several sulphur fumigations to get rid of the last traces of the fungus while the heating pipes are still at command. Seedling ten-week stocks are also subject to trouble from mildew now and it pays to give them plenty of room so that light and air reaches every part of each plant. Heat is bad for these at any stage and so is abundant moisture. What they like is a cool, airy and fairly dry house or frame where no frost can reach them and no fire heat without air on. This is in a measure true of all annual seedlings, but is imperative in the case of these stocks.

Chicago Park Notes.

The new fernery annex to the great conservatory in Garfield park is improving rapidly in appearance as the fine specimen ferns get hold and the younger plants and seedlings come into line. The foliage plants in the house devoted to them are also in splendid order. A system of lath shading has been installed which will doubtless serve to prevent a repetition of last year's trouble with regard to overheating and consequent harm to the foliage by sun. Quite a number of flowering orchids are now arranged in this house while the show of Ghent and mollis azaleas, cinererias, bulbous and other choice showy plants in another house is remarkably fine. Anyone interested in New Holland plants, rare conifers, camellias and such things should pay a visit to the temperate house here where choice collections carefully labelled can be seen.

There is still a lot of repair work to do here to the glass roof recently damaged by wind and hail. The glass now is 24x24 inches and there is a talk of reducing the size to 18 inches and stiffening the curved sash bars by cutting them out of the solid instead of bending them. There is quite a difficulty in getting men to work on the large house as they are, apparently, not used to this kind of work. It is fortunate that the weather is getting warmer instead of colder or the consequences of such a large amount of air would probably be serious. The mosquito plant (lopezia) is very attractive here to visitors and such quaint things are especially suitable for public places where citizens come to learn all about them. In the propagating houses there is a splendid lot of stock in all varieties coming on and the orchids are improving rapidly and many of them flowering freely.

Running the water out of the lagoon in Humboldt park, owing to construction work, has given the gardeners a chance to clean out the bed and inspect the boxes in which the lilies are planted. The herbaceous plants around the lagoons and in the rose garden are starting up well and the early bright yellow Narcissus Golden Spur is already making a fine show in various parts of the park. The fall growth on the thousands of Lilium candidum planted has come through the winter quite green and fresh and, unless the troublesome fungus attacks the growth, these will be a magnificent sight this summer. Already in the glades, scillas, chionodoxas and Star of Bethlehem are flowering, the former making a beautiful blue carpet that will be followed a little later by the blue periwinkle. The number of people using this fine open park on bright days is very encouraging to those in charge and shows the appreciation of the citizens. The shrub plantings are looking remarkably well and the varied tints of the young growth is very attractive. In a few years the wisdom of Jens Jensen's mass planting of these shrubs will be apparent and probably the most carping of his critics will have to give him credit for his farsighted policy.

A SUCCESSFUL LAWN VASE.—See Page 688.

The citizens of Austin want a more beautiful school yard as set forth in the following report of the committee on grounds and buildings to the school board: "This committee reports that it is in receipt of a communication from H. W. McFarlane, president of the Austin Public Policy club, stating that at the request of said organization, Jens Jensen, superintendent of the special parks commission, has made a study of the Austin high school grounds and designed a plan for improving and beautifying them in a manner suitable for a high school, that the improvements will cost between $1,200 and $1,500, most of which sum has been practically assured by public

spirited citizens of Austin, and asking authority from the board of education to proceed with the work at the earliest possible date in accordance with plans and specifications submitted to the committee and modifications of said plans as suggested by the principal of the school, the details of which are to be worked out by Mr. Jensen and the architect of the board." With the money forthcoming and with Mr. Jensen back of the project there seems little reason why this needed improvement should not be carried out.

Visitors to Jackson park this spring will note considerable improvements, notably around the yacht harbor and the new life-saving station. The new concrete walk along the harbor will doubtless be a very popular place in summer, for the scene there is always very lively with the constant movement of the yachts and launches. The planting hereabout is beginning to take shape and it is an open and delightful place for pedestrians. The wooded island is a never-failing attraction and the most favored haunt of wild birds, perhaps, for miles around the city. The feathered inhabitants are in bright plumage now, and it is an interesting place for the bird lover. In the rose garden the plants have come through the winter extremely well and pruning and siding up generally is going on. The golf grounds here are very extensive and well kept, and, altogether, the citizen would be hard to please who would not be satisfied with the healthy lake breezes and the other enticements of Jackson park.

The small parks and playgrounds movement will probably be helped by the visit of the house, park and boulevard committee, from which authorization for a $1,000,000 bond issue is sought, on April 20. The party of inspection was evidently in favor of increasing the number of small parks and expressed satisfaction at the progress made. "Keep off the grass" signs were deprecated by Representative Smejkal, who said he liked to see the children rolling on the grass, and all expressed their pleasure at seeing Seward park, where the children have three acres for recreation, a reading room, lunch room and gymnasium. But Park No. 1 at Noble street and Chicago avenue was the surprise. Here Alderman O'Niel says an average of 5,000 persons a day use the swimming pool, 7,800 being the number one hot day last summer. The municipal park, the gift of the Commercial club, the new park being built in the Ghetto district and several others on the south side were visited.

Many residents still regret the passing of the greenhouses at Douglas park and are not mollified even by the fine open space provided here now. There is ample room around here for planting summer bedders and herbaceous stock and John Sells has a fine lot of these in preparation for the work. The lily pond is to be fixed up and boxes provided for planting a quantity of water lilies and other aquatics. The lagoon here is still undisturbed and opinions vary as to the wisdom of filling it in as was at one time proposed.

It is difficult as yet to say how the large trees transplanted to Grant park on the lake front will thrive. Moving trees of this kind is always dangerous and the position is very exposed. Still they look all right so far and we may hope for the best. Roadways are being made and grading going on showing what the park will look like. Meanwhile the row over the site of the Marshall Field museum goes merrily on and nothing is as yet decided on. A central site for such a building as this will be seems highly desirable.

There were great crowds of happy hilarious youngsters in Garfield park April 23 (Arbor day) on the occasion of planting a tree near the Robert Burns monument by the children of some of the west side schools. It was evidently quite an event in their lives and greatly enjoyed by all. These occasions should be more frequent.

FIELD OF CALLAS IN FLOWER AT LILYDALE, SANTA CRUZ, CALIF.

WITH THE GROWERS

Lilydale.

The picture herewith of a field of callas at Lilydale, the bulb farm of Colin H. McIsaac at Santa Cruz, Calif., will doubtless be of interest. C. H. McIsaac is the secretary of the Santa Cruz chamber of commerce, and actively interested in developing and making known the advantages, resources and attractions which Santa Cruz county possesses. The photograph from which the illustration was prepared was taken at Lilydale, February 28, 1908, and it shows more convincingly than words can that there is a section of this country which is as well (if not better) adapted for bulb growing than any of the famous bulb regions of Europe.

The picture was taken, not alone because of its attractiveness, but to show the growth attained by the lilies in nine months, the tiny bulbs having been set out during June and July preceding the taking of the photograph. None of the bulbs planted were more than an inch and a half long and as big around as a lead pencil. Only under conditions essentially perfect for bulb culture could these lilies in nine months have attained the luxuriance and size shown. Some 250,000 bulbs are growing in the field shown in the picture, and as many more in a similar field back of the bungalow.

Santa Cruz county is one of the coast counties of California, some 80 miles south of San Francisco. Ideally environed by mountain, valley and sea, this favored spot rejoices in climatic conditions so equable that, had it nothing more to offer, it would still be richly endowed. But its natural resources and charms are many, and among these adaptability for bulb culture deserves prominent place, its unusually advantageous conditions for such enterprise not being as widely known as they deserve to be. Climate and soil unite here to provide bulbous plants with just the conditions they require, and not a symptom of disease is in evidence to check rapid growth, interfere with perfect bloom, or retard the development of large, perfectly healthy, vital bulbs.

Ordinarily, lilies grow in this section during the so-called winter or rainy months without interruption, many winters passing by without frost enough to perceptibly damage the blooms, while the heaviest frost experienced does not injure them appreciably. Last fall some 10 pounds of calla lily seed was sown at Lilydale, and these seed beds are at this writing crowded with tiny lilies from one-half to two inches high and growing remarkably fast. Approximately there are some 150,000 seedlings in these seed beds, and the bulbs thus produced are particularly fine and vigorous.

J. D. Thompson Carnation Co., Joliet, Ill.

Manager Chas. M. Fish reports business this season considerably ahead of that of last season, and appearances in both the cut flower shipping room and the propagating house just before Easter certainly seemed to indicate that there was "something doing" here. But in spite of the rush to get off the Easter orders, Foreman P. W. Peterson took occasion to pilot us through the houses, pointing with justifiable pride to some of the accomplishments of the place.

Among the carnations Beacon seems to be a prime favorite. There are now 8,000 plants here, and there will be half as many more next season. Mr. Peterson claims it is as good a producer as he has, having estimated it would average fully five more blooms to the plant than Enchantress. Practically a continuous bloomer, it certainly has proved a money-maker here. White Enchantress also shows up as a splendid producer and a good money-maker.

The propagating house is a wide, airy house, 30x50 feet. Four times this season it has been filled, 140,000 cuttings being put in the sand each time. The cuttings are planted unusually thick, 110 being the number planted in each row across the 5-foot benches. The rows also are very close, and Mr. Peterson says that it is his experience that as many cuttings root successfully this way as if they had more room. He lays considerable emphasis on the fact that the cuttings are kept in water for 12 hours before placing in the sand. It was an unusual instance, but in the case of one batch of 7,000 Winsor cuttings, only one cutting failed to take root. The varieties that will be grown here next season are as follows:

Beacon	12,000
White Perfection	5,000
White Enchantress	15,000
Enchantress	12,000
Rose Pink Enchantress	12,000

For the first time this firm will offer chrysanthemum cuttings for sale, one corner of the propagating house now showing a very thrifty lot of young plants. They include, in white, October Frost, Kalb, Virginia Poehlmann, Clementine Touset, Alice Byron, Wanamaker, Timothy Eaton, Chadwick and Jeanne Nonin; in yellow, Golden Glow, Monrovia, October Sunshine, Bonnaffon, Yellow Eaton, Golden Chadwick and Robt. Halliday, and in pink, Maj. Balfour and Dr. Enguehard.

Chicago Carnation Co., Joliet, Ill.

The Easter season was a busy one with the Chicago Carnation Co., and while there was an excellent crop on at the time of our visit, everything was cut closely in order to supply the big shipping demand, and the hurry of the place was concentrated in the packing and shipping room.

But to the visitor the chief interest lay not in this necessary commercial aspect, alike the country over in such establishments, but in the propagating house. Here is where personality counts, and Manager A. T. Pyfer was in his happiest mood pointing out the various carnations he has in the sand both for his own use and for supplying the customers.

All told this season there have been some 800,000 cuttings put in the sand, about 200,000 being intended for the firm's own use. This propagating house is 30x150 feet and is filled about four times in the course of the season, the last batch being now in. Of the 250,000 cuttings now in the sand 100,000 are White Enchantress and 50,000 are White Perfection. Beacon, Andrew Carnegie, Victory, Aristocrat, Enchantress, Rose Pink Enchantress, Winsor, Daybreak Lawson, White Lawson, Splendor, Lawson Enchantress and Lady Bountiful are the other varieties propagated. A noticeable absentee is Lawson, this variety not having been grown here for the past three years. Interesting for the possibilities of the future they may now contain are the cuttings from some 200 of last year's seedlings, "as good," says Mr. Pyfer, "or better from present indications than the standard sorts." There are 500 such cuttings already potted up and another 500 ready for potting.

Among the carnations to be disseminated next season are three very meritorious varieties. One is the salmon pink Mary Tolman, originated by A. E. Hunt, of Evanston, Ill. It has better color than Enchantress, produces large blooms, is very free and the cuttings planted here have proved exceptionally easy rooters, and very few in the entire lot failed to root. Sangamo, originated by A. C. Brown, of Springfield, Ill., is another sort of unusual promise. It is a brilliant pink and both Mr. Pyfer and his foreman, Peter Olsem, declare it will quickly take the place of Winsor. Conquest which was originally a seedling in this same place, is the third sort that will be sent out next season. It has the Lawson habit, with very long, heavy stems. In color it is a light pink overlaid with deep rose pink. Other new sorts that will be grown here, but already being disseminated by the originators, are O. P. Bassett, sent out by Bassett & Washburn, of Chicago, May Day, originated by E. T. Graves of Richmond, Ind., Pink Delight, by F. Dorner & Sons Co., of La Fayette, Ind., Alvina, sent out by Henry Eichholz, Waynesboro, Pa., Mrs. Chas. Knopf, sent out by the Chas. Knopf Floral Co., of Richmond, Ind., and Gov. Deneen, by A. C. Brown, Springfield, Ill.

Out in the range a good crop is on but the writer having timed his visit in the midst of the Easter rush found the open blooms well cut off, otherwise a view of some of the houses would have shown a magnificent display, especially in the White Enchantress, a variety Mr. Pyfer finds it hard to praise sufficiently. He says that plants now two years old have produced fully 20 blooms to the plant from August 1 when cutting began to January 1. Since that latter day there has been a fair crop and thousands of cuttings have been taken. Mr. Pyfer goes so far as to say that there is no need for any other white while we have White Enchantress and White Perfection. Winsor has proved a fine variety and well liked by customers. Since the first of the year good, long stems have been the rule. Next season Sangamo will be in the field for honors in the same class, and Mr. Pyfer expresses the opinion that Sangamo will come out ahead.

A remarkably fine, thrifty lot of plants are the Andrew Carnegie; they are very heavy producers. Aristocrat in the same house are also fine plants throwing blooms on long, strong stems. Conquest is a fine flower. Its color, light pink overlaid with dark rose pink, Mr. Pyfer thinks can be brought into favor even among those who have hitherto been prejudiced against the so-called splotched varieties. Its two shades are in beautiful harmony, and its size, form, calyx and stem are all in its favor. Fine luck has been had here with Beacon. Some have found it difficult to propagate, but here no fault can be found with it.

Joseph Heacock Co., Wyncote, Pa.

Each visit to the noted range of the Joseph Heacock Co., Wyncote, Pa., discloses something new and original. Although the new carnation, Dorothy Gordon, has at various times been mentioned in the trade press, it has never yet received full justice. On a recent visit, we were greatly impressed with the profusion of bloom in one house, devoted entirely to its culture. Dorothy Gordon comes from Lawson and Enchantress. It is a remarkably prolific bloomer, with a long and strong stem, being absolutely free from all diseases. The color is so near that of Rose Pink Enchantress, that experts have been deceived, but while there has been much dissatisfaction with Rose Pink Enchantress on account of its variations, Dorothy Gordon has always shown a solidity and stability in color that is unsurpassed.

Joseph Heacock, says of this carnation: "With Dorothy Gordon, we have cut 30 per cent more blooms and our cash receipts have been 50 per cent higher than with Enchantress." Such a statement from a man of undoubted integrity, is worthy of attention. This

WINDOW BOXES ONLY FOUR FEET ABOVE THE SIDEWALK.

carnation, in all the phases of its development, from the present-day viewpoint, seems almost perfect. We predict for it an immediate leap into popularity, as soon as its merits become generally known and recognized. Dissemination of this fine production will begin in December of this year. Over 20,000 plants have already been ordered and this is merely the beginning. The plants will be sold at the popular price of $75 per 1000 and Mr. Heacock says that he has made ample preparations to supply the trade with strictly first class stock.

Though orchids have for some time been grown at this range, it is but recently that their culture has been attempted on a large scale. Within a very recent date, 125 cases of cattleyas were purchased of Carillo & Baldwin, the well known collectors of Secaucus, N. J., and this stock is being rapidly potted and put in condition for flowering. Many fine blooms of C. Mossiæ are now being sent to market. In the past, this range has been most noted for its palms. Asked as to the number under cultivation, Mr. Heacock said: "Well, I guess there are 100,000 more or less."

Very many of these palms are in tubs ranging through 7, 9 and 12-inch sizes. "I believe," said Mr. Heacock, "that a palm does better in a tub than in a pot. Then, you know, that often the boys handling palms will grab one in a hurry and if it is in a pot, the pot will fall off and break, then, of course, a new pot must be secured and it must be repotted, causing much inconvenience." The cedar tubs used at this range, are made to order by the Richmond Cedar Works of Richmond, Va. Aside from Dorothy Gordon, a good variety of other carnations, including Enchantress, are grown at this range. Killarney rose is largely grown and large numbers of fine blooms are daily shipped to the wholesale markets. Richmond is also grown in quantity sufficient to supply the demand. Though growing a few plants of Mrs. Jardine, Mr. Heacock does not consider it sufficiently popular to give it much more than a trial space.

One house of Dorothy Gordon will be planted very soon and it is aimed to have good blooms for the fall exhibitions. At the Washington exhibition this carnation scored 86 points and 90 points when later exhibited before the New York Florists' Club. A new house 25x225 feet has just been erected at this range.

The Way the Wind Blows.

Mark Twain says the wind blows from the north, or the south, or the east, or the west, or some point approximating in those general directions.

I see by reports that Wm. H. Elliott read a paper on roses before the New York Florists' Club. There is no question but that gentleman can write and speak very entertainingly. It was also a pleasure to see that O'Mara, Pierson, Weathered and some of the princes of finance and otherwise, aired their views, in the debate which followed. In the latter Mr. Elliott is quoted as saying, "You heat the space where the plants are, and use the colder air as a blanket to protect those plants." That passage comes as near nature faking as it is possible to be, but then he is not quoted as saying he did it. It is you, and who the you is, we are not told; that is one of the richest phrases I have yet met, and Mr. Pierson didn't like his reasoning on that point. Who can blame him for not doing so? Probably some day Mr. Elliott will tell us what it means and how he arrives at the results. As a grower and a heating expert we take our hats off to him, but the best of us sometimes get badly mixed.

In the excitement Mr. Pierson said that the florist business is becoming a manufacturing proposition. Who ever heard of a carnation, rose, violet or any natural flower being manufactured? When we use that word we had better slow up, put the brakes down hard, and ask ourselves where we are at. We aid or assist nature by artificial means to produce flowers but we can't manufacture them any more than we can cows or horses. I hate to talk about the old days, but it makes me tired to hear these youngsters speak of iron houses and wide houses as being a modern product. When I stroke my patriarchal whiskers it brings back memories. Many of your readers will remember when E. M. Wood of Natick had a store on Fourteenth street, New York, and kept a salesman in Philadelphia; that was a good many years ago. He was building iron houses, wide houses and high houses, iron and cement in their construction, for roses. Some time ago when I visited the place and was shown round by Alex. Montgomery, I was pleased to see the houses were in as good repair as when built. Mr. Wood I believe was the pioneer of American rose growing and also the pioneer of greenhouse construction, he was building houses 30 feet in width, of the above description when the other fellow was building wooden houses 10 feet wide. I must say that Mr. Wood was years ahead of his time and the men of today are copying those ideas he left them.

RAFFIA STRINGS.

LEGAL NOTES.

Damages for Malicious Prosecution.

A QUESTION OF PLANT "STORAGE."

C. H. Hune was given a verdict for $1,000 damages against Pinckney Latham, Jr., by a jury of the circuit court April 15. The verdict was the outgrowth of a dispute over a valuable plant. The plant belonged to Mr. Latham, and in the winter of 1907-08 was stored with the Memphis Floral Co., Memphis, Tenn., of which Mr. Hune is manager. Five plants were stored and four of them were returned to Mr. Latham in good order. When he caused a warrant to issue, charging he demanded the fifth it could not be located, and after waiting some time Mr. Hune with fraudulent breach of trust. The warrant was issued in April, 1908.

Within a few hours after the warrant was issued it was dismissed at the instance of Mr. Latham, through a recommendation of the attorney-general. Almost immediately Mr. Hune filed suit for $10,000, alleging false arrest and malicious prosecution as his cause of action. The case was called for trial April 14 and quite a number of witnesses were heard. The suit was hotly contested by both sides, Mr. Latham declaring that he secured the warrant while firmly convinced that his plant had been kept from him wilfully, and Mr. Hune asserting that he had made every effort to locate the plant at the proper time, and that he

ESTABLISHMENT OF JOHN A. HELFRICH, PARIS, ILL.

did, subsequently to his arrest, locate it with a lot of others and return it to Mr. Latham.

Nurseryman Held on Forgery Charge.

James Dearing of Brunswick, Mo., was arrested April 21 on a charge of fraudulently forging and altering a contract between W. T. Vickers and James Dearing by making erasures and interlineations in the contract. Complaint was made against Dearing following the finding of a jury in which Vickers was awarded $25 on a claim for $250 damages against Dearing. Dearing gave bond of $300 for preliminary hearing.

In the suit on April 21 Vickers, through his attorney, F. B. Williams, asked damages of $250, claiming he had ordered 3,000 trees from Dearing and that the trees shipped were diseased with San Jose scale and the woolly aphis. But 1,000 of the trees ordered were shipped. Dearing claimed his trees were not faulty and demanded payment of $70 for the trees. Samples of trees claimed to have been included in the shipment to Vickers were exhibited. Dearing claimed the trees were not shipped from his nursery and were grown in soil not like that in which he grew trees. Vickers in the criminal suit claims the contract which was made between him and Dearing has since been altered. It is claimed the altering of the wording of the contract caused the jury to reduce the amount of the judgment given Vickers.—Springfield, Mo., Leader.

To Be Done Now.

IN THE GREENHOUSES.

All young stock must be carefully looked after now and not allowed to stand close together and draw up spindly.

Pinch seedling cobeas once or twice to get the vines well furnished at the base and insure plenty of good foliage below.

There is still time to strike cuttings of Tropæolum speciosum and others for window boxes and small plants for bedding or window planting.

Bedding stock that is almost finished should have all the air possible to gradually harden it preparatory to planting out.

Give young rose stock a shift into larger pots if it is evident that the benches will not be ready for it on time.

Continue to pinch the young carnation plants until the foundation for good specimens is laid.

Old soil from the mignonette and violet benches, if mixed with a little new loam and manure, will be quite good enough for potting late bedding stock.

Keep a little heat in the pipes at night in all departments but avoid overheating them on cold mornings likely to turn out bright later.

Use a very light soil with plenty of well decayed manure and sand for coleus. In this material the growth will be very rapid.

Keep tomato plants pinched for pot room until the first bunch of flower buds can be seen and then give more room either by repotting or planting out.

Keep the flower buds constantly pinched out of ageratums, alternantheras and other small bedding plants.

OUTDOORS.

Place a little rough litter around the new shoots of semi-hardy plants like the giant asphodels, to protect them from cold winds.

Let the edges of lawns be well consolidated by several mowings and rollings before cutting, as they will then keep their shape much better than if cut early.

Peonies may still be transplanted with a fair chance of their flowering this season, but it is time this work was finished up or the growth will be too forward.

Sow hardy annuals if the soil is in good condition, but wait a little longer if it is not.

Draw a little soil up to the earliest rows of sweet peas to protect the young plants from cold winds or place a little rough litter along each side of the rows.

Finish the pruning of hybrid perpetual, tea and rambler roses and do any tying or staking that is necessary.

When a quantity of good salading is needed in winter sow plenty of chicory; Witloof is the best variety.

Roses for bedding may be planted at any time now if the soil is ready and well prepared. Gruss an Teplitz should be noted as one of the finest red bedders.

Clear away the old rubbish from hardy ferns and if the position is at all windswept, give the young growths a little protection.

Raffia and Raffia Wax.

When raffia, or roffia, as it was called, displaced the old "Cuba bast"—the inner bark of the West Indian mahoe tree (Hibiscus elatus)—as a tying material for garden purposes, little or nothing was known of its origin. After a while, however, it was discovered to be the produce of the Madagascar palm (Raphia ruffia) imported from the Mauritius. Raffia consists of the thin cuticle or skin of the leaf, and, notwithstanding its thinness, is very strong. The natives of Madagascar tear it into fine thread-like strips, and when dyed (chiefly in red, yellow or black) use it for making mats. In England, raffia has been used and probably is used still, for making ladies' hats. In more recent time Madagascar raffia has had competitors in some of the west tropical African species of the raphia, the cuticle of the leaves of which is similar to that of the Madagascar species, both in strength and appearance. Twisted into cord, the natives use it for the making of hammocks. Judging from a recent consular report from Madagascar, the raphia palm seems to have been attracting some attention as a wax-producing species. It appears that, when collecting the leaves for preparing the raffia fiber, the natives bring them into camps, where, after the fiber is extracted, they are left lying about, often in considerable quantities. So far back as 1905 a colonist, while examining these abandoned leaves, discovered that, when shaken, they yielded a white substance, which, upon being boiled, yielded wax. The natives were, at the time of its discovery, induced to prepare about 100 pounds of this wax, which was offered for sale in the market, and sold in lots at 1s. (24 cents) per pound. The preparation of the wax has never been repeated, nor any shipment made, as it has been considered that the resultant wax is too small in quantity, and the cost too high for it to become a commercial article, a very large number of leaves being required to produce even one pound of wax. The facts prove, however, that wax is present, though it may be only in small quantities, in other species of palms besides the two well-known sources Ceroxylon andicolum and Copernicia cerifera.—Gardeners' Chronicle.

Corozo Nuts in Mexico.

From Frontera, Consul A. J. Lespinasse writes that the corozo tree abounds throughout the Mexican state of Tabasco, being most abundant in the virgin forests, as it requires shade and humidity to develop favorably. The consul's description follows: "The corozo commences to bear in the seventh year, producing one crop annually of two or three clusters, the clusters frequently containing over 1,000 nuts, and fructifies from March to April, with total weight of 500 pounds. Every 200 pounds of the unpeeled nuts will produce 20 pounds of kernels. This plant is abundant in certain localities, where the nuts sell for $3 to $5 gold per ton of 2,200 pounds, which will yield 200 or more pounds of oil. When the corozo nut is properly manipulated it will produce 50 per cent of oil, colorless, of agreeable odor and taste. The oil can be employed for medicinal and household purposes; it solidifies at a low temperature, and according to tests made it could be employed to great advantage in the manufacture of fine toilet soaps and pomades.

"Although European houses have repeatedly endeavored to obtain information about the quantities of this nut which could be shipped, it does not appear to have stimulated its cultivation, as the tree is allowed to grow and increase in immense quantities in its wild state without receiving the slightest attention. Under proper cultivation the corozo would undoubtedly produce a greater number of nuts of better quality and greater proportion of oil. It would therefore seem that there is an opportunity to profitably develop this industry. The tree not only produces the oil-yielding nuts, but also contains a quantity of exceedingly tough fiber which resists the rotting effects of water. This could no doubt be manufactured into coarse ropes and cordage, etc. The corozo is a species of palm which attains a height of 20 feet or more; the clusters of nuts are attached to the base of the plumelike leaves which spring from the crown. A small fragment is forwarded of one of the large clusters of corozo nuts, the oil-producing kernel being inside the bonelike nut." Samples of corozo nuts from both Mexico and Colombia may be seen at the bureau of manufacturers, Washington, D. C.

OBITUARY.

Charles Biederman.

Charles Biederman, a member of the firm of Schultz & Biederman, Kansas City, Mo., was stricken with a hemorrhage while walking along Grand avenue April 13. He was assisted to the office of Dr. Julius Frischer, where he died. Mr. Biederman, whose home was at 3325 Prospect, was 70 years old, and had lived in Kansas City 45 years. He was a noted hunter and was Kansas City's oldest sportsman. He is survived by his son William and three daughters.

Walter Scoon Hogg.

Walter Scoon Hogg, one of the pioneers in the florist business in Providence, R. I., died suddenly at his home, 34 Congdon street, April 18. Although he had been in poor health for several months, he was not confined to his home, and on the day of his death attended church. Later in the day a hemorrhage of the brain caused his death. Mr. Hogg was born in Scotland in 1844, and came to America in early childhood. He was educated in Providence, and had always lived in the section of the city where he died. In 1864 he entered business as a florist at the corner of Benefit and Meeting streets, there being at the time but three establishments of that kind in the city. He was very successful and retired in 1900.

THE AMERICAN FLORIST

1885 TWENTY-FOURTH YEAR. 1909

Subscription, United States and Mexico, $1.00 a year; Canada $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from those in the trade.

When sending us change of address always send the old address at the same time.

Advertising rates on application.

From the first issue the AMERICAN FLORIST has accepted only trade advertisements.

Advertisements must reach us Tuesday (earlier if possible), as we go to press Wednesday.

We do not assume any responsibility for the opinions of correspondents.

There is no unbelief;
Whoever plants a weed beneath the sod,
And waits to see it push away the clod,
He trusts in God. —Lytton.

MOTHER'S DAY, when all good citizens will wear a white carnation, is May 9. Mother's day has been made an official state holiday by Governor H. S. Vessey of South Dakota.

National Council of Horticulture.

The titles of the articles included in the sixth installment of the press service of the National Council of Horticulture are "Easy Plants for the Aquatic Garden," "Elephant Ear," and "Making an Asparagus Bed." These excellent articles may be obtained free on application to J. H. Burdett, 1720 West One Hundred Fourth place, Chicago.

MISSISSIPPI.—The name is Chionanthus Virginica, commonly known as fringe tree or old man's beard.

AGAIN the hailstorms in various parts of the country have caught florists unprepared or uninsured. Such lessons should be taken to heart by those who are building new glass or who have plants still uninjured and uninsured.

American Carnation Society.

CARNATION REGISTERED.

Kathleen B. W.—By F. Schramm, Park Ridge, Ill.; sport from Mrs. Thos. W. Lawson; color light pink; size three inches. This registration is provisional, subject to the decision of the judges at the next annual meeting as to its distinctiveness.

A. F. J. BAUR, Sec'y.

Society of American Florists.

REGISTRATION OF HYDRANGEA.

Public notice is hereby given that E. Y. Teas, of Centerville, Ind., offers for registration the plant described below. Any person objecting to the registration of this plant or to the use of the proposed name is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date:

Hydrangea cinerea sterilis. (Teas' Snowball hydrangea). Collected from forest; a sport from Hydrangea cinerea; growth upright, spreading; foliage glaucous, pointed, serrated; height four feet; flowers snow-white.

W. N. RUDD, Secy.

April 23, 1909.

Chrysanthemum Society of America.

It is the earnest desire of those interested in this society to increase its membership. It should be understood that the secretary is the only officer receiving a salary, and he only a nominal sum, much less than the work involved deserves. The other officers, including the executive committee and the members of the committees who judge the varieties each year, perform their duties solely for the welfare of the society. The work of the committees deserves unlimited endorsement from all persons interested in this branch of floriculture.

There was a time when new varieties were sent out in large numbers upon the merits as they appeared to the originator and in many cases they did not sustain the glowing description applied. Today all newcomers must be endorsed by the society's committees to interest the public to any great degree. Some may say all the certificated varieties do not come up to the standard. I know from experience there is no favoritism shown in the awards. The members of these committees are not superhuman and can not discern from the six blooms submitted certain defects that are either constitutional or controlled by cultural conditions. I refer to those susceptible to disease, difficult of propagation, insufficient petalage, etc. They give their unbiased opinion of the six blooms before them and that is all any mortal man can do. These gentlemen are certainly entitled to the hearty support and praise of every grower for the unselfish zeal they have manifested in devoting time and money to this work. Their benevolence enables the society to protect the buying public against worthless sorts.

I feel there are too few commercial and exhibition growers interested in this charitable work. I say charitable because we save dollars for every grower by indicating the best kinds for his purpose and do this without compensation. Am I asking too much of any grower, either private or commercial, to send C. W. Johnson, secretary, Rockford, Ill., $2 (the annual membership fee)? All of us spend this small amount in some foolish way without benefit. Some may say it is unnecessary to join the society as its important matters are made public through the trade papers without additional cost. This is true, but we all have a moral obligation which should not be lost sight of. The florists of this country are like one large family whose interests are in sympathy. One grower's failure with a certain crop prevents him meeting his obligations and thus his misfortune bounds and rebounds to others in the trade. If this organization, through its efforts, has pointed out the best sorts and has thus been a benefactor, it is up to those receiving such service to join hands and assist. Let us hope every one in the trade has interest in the welfare of all and has pride enough to support this worthy cause by giving liberally of moral and a small amount of financial support.

ELMER D. SMITH, Pres.

Adrian, Mich.

Agricultural Press Amenities.

More Lying.—The mendacious Rural New Yorker is again snarling at the heels of the Country Gentleman, and in a manner more contemptible if possible than its persistent shrieking last year of the falsehood that we had defended the Dawley cattle transactions. It says that we took a subscription for that paper and appropriated the money instead of remitting it, and that they have been trying in vain since Christmas to collect it. It may be worth while to add, in view of the same paper's recent attack on the Buffalo Fertilizer Co., that, before making it, Mr. Collingwood or his associates strained every nerve to secure the advertising of that company, by circulars, signed letters and personal visits—but unsuccessfully.—Country Gentleman.

Trade Directory

(EDITION OF 1909.)

Of the Entire Horticultural Trade of America
Is Now Ready for Mailing. Price $3.00, Prepaid.

A complete alphabetical list of all American cities, with the names and addresses of all commercial horticulturists therein. A separate list, arranged alphabetically, of every commercial horticulturist in this country. These lists are keyed to indicate the special line or lines of each establishment. The book also contains special lists, as follows:

Park Superintendents,	Horticultural Societies,*	Florists' Clubs,*	Supply Concerns,
Landscape Gardeners,	Experiment Stations,*	Foreign Houses,	Judging Scales,
Trade Associations,*	Botanical Gardens,	Catalogue Firms,	Seed Growers,
Leading Cemeteries,	Postage Rates,	Express Rates,	Statistics.

*With new officers to date.

AMERICAN FLORIST CO., 324 Dearborn St., Chicago, U. S. A.

Lawns and Lawn Making.

One of the most difficult propositions that our park superintendents have to encounter is the making of a great many blades of grass grow where nothing grew before—in other words, to create a fine sward or lawn on land reclaimed from swamps or sandy wastes and often of a most unsuitable character. For grass, though so common as a weed, must have fairly good soil to grow in if a good turf, that will stand the summer's sun and the winter's cold, is to be produced. And these conditions of summer heat and cold are so pronounced that only the hardiest kinds of grasses, and not those finer kinds that make close level lawns can stand them without heavy waterings in summer and more or less protection in winter. The value of these grand open spaces around our cities cannot be expressed in mere dollars and cents. It is incalculable, as is the effect for good upon the thousands of citizens that use them.

We can, however, safely leave the park men to their own troubles, they are quite capable of looking after themselves. Those of our readers, though, who have perhaps purchased or rented a home in some such position as noted where drifting sand is the principal constituent in their gardens may be excused for feeling rather hopeless at the prospect. Yet they need not give up. Time and labor judiciously employed will work wonders in cases of this sort. But begin right; never start by sowing grass seed or laying sod. First of all take a look at the plot of ground and decide what is best to do with it. If it is very much windswept decide where would be the best position to plant a windbreak of trees or throw up a bank of soil for the same purpose. There may be parts of the plot that are too high and others too low for the scheme of planting and all the grading work should be attended to first. Moving earth has been described as only second in difficulty to moving heaven, so let one moving be enough and put the soil where it is needed in the first place.

In localities where danger from surface water is not feared a sunken garden and lawn is often a very nice feature and where the position is much exposed the depression is of great value to tender and semi-hardy plants, also to the grass. Such positions are moister in summer and warmer in winter than the surrounding level and the subject is well worth considering. The banks that are thrown up with a southern exposure are splendid places for many kinds of flowers. If sown to grass early crocuses, daffodils, snowdrops and other bulbs may be planted and this will be one of the most pleasant parts of the garden in early spring. The bank facing north will be a fine place to plant hardy ferns, English ivy (where it will grow) and similar plants that thrive in semi-shade while the banks themselves break the monotony of a level and give a fine opportunity for planting a weeping tree or two or a few trailing roses. Avoid making the slopes so steep, though, that the lawn mower cannot be used on them and also avoid straight lines when possible. There may possibly be a tree already standing on the place. If it has any ornamental value leave it and it will probably form an excuse for a curve in a bank or walk.

On a recent very windy Sunday the writer was walking in one of the suburbs south of Chicago where many new houses, each standing in its own little lot, have recently been erected. The soil is a shifting sand and there were many old willows standing there. These are not very ornamental, it is true, but in such a position the gardener should welcome anything that forms ever so little break against the wind and helps to keep the sand in place. But these were being cut down and the soil everywhere brought to the same dead level, a waste of time and good garden material. Had they been left, or at least some of them, the surrounding soil could have been sloped gradually up to them and, in some cases, the heads could have been so trimmed that, in a few years, they would have been an ornament to the garden not a dissight. At least, they would do for training something else over and would, in some measure, prevent the sand drifting.

On such soils as these anything in the way of vegetable refuse or rubbish of almost any kind is a help in binding the soil and adding humus. The first thing to do is to grade the entire plot just as it is required. If there is any tufted grass of a perennial nature or other deep rooting weeds let these be chopped up and dried to be later burned and added to the staple. There may be foundations for other houses being dug in the neighborhood and soil of a better character being dumped. If this can be obtained for the price of teaming it will be well worth it for adding to the staple while any chance oddments of turf or sod, ditch cleanings or material of this kind is very valuable. Last a thorough coating of good manure should be spread all over the surface and after laying a few days this should be lightly forked in. After allowing a week or two for settling the soil should be raked over level and is then ready either for sowing to grass seed or sodding.

Heavy moist soils or soil that is badly drained will need different treatment and such soils, if an outlet can be found for the water, are not so much trouble to get in order. Drains should be cut every 12 or 20 feet, according as the position is very wet or only moderately so, and filled in with rough stones or bricks, clinkers or similar material to within six inches of the surface. This work should be carried out in early fall or late summer and the drains should be sloped considerably, according to the lay of the land and have a common outlet at one end. When the drains are all finished the soil should be well turned up and left rough all winter, the spring treatment consisting of leveling it down with forks and rakes and adding thereto any ashes, sand or other lightening material that is at command.

The varieties of grass suitable for lawns are numerous but as a rule it is safer for the amateur to put himself in the hands of a reliable seed house, explain the nature of the soil and the size of the plot to be sown and leave it to the firm to supply what is needed. These houses have usually mixtures ready prepared that are suitable for lawns in the different soils and localities. The soil should be raked thoroughly and left roughly level using a coarse toothed rake at the last to form the little inequalities in the soil necessary to cover the seed. Then sow the seed broadcast, very thinly at first, going over the ground at least three times and in different directions each time. Then lightly rake over, leaving all perfectly level. This work should never be carried out on a windy day or much of the seed will blow away and be wasted. And the soil must be in just the right condition, not so wet that it sticks to the feet or rake, or absolutely

BUY DIRECT OF THE GROWERS

Bassett & Washburn,

Store and Office: 76 Wabash Ave. CHICAGO. Greenhouses: HINSDALE, ILLINOIS.

St. Louis.

STOCK OVERPLENTIFUL.

The glut during the past week was heavy and stock was slaughtered. Up till Saturday all the houses were stocked up. Saturday everything stiffened up. The prices during the week at the down-town retail stores were deplorable, carnations and roses at 5 cents per dozen. This kind of business is degrading and detrimental to the trade. Lilac is now coming in from the suburbs and outdoor flowers will now be side by side with indoor stock and of course will tend to lower prices all around. Carnations were up on Saturday and Sunday to two to three cents. Roses are in good supply, though not so plentiful. Sweet peas, owing to the passing away of violets, have the call and prices on these have stiffened considerably, 35 to 50 cents per 100. Ferns are now quoted at $3 per 1,000.

NOTES.

Smith Floral Co. has just purchased a horse for its special quick delivery. The animal is a good one and is a thoroughbred, having been seen on our race courses when the races were running.

There was a flower war on Eighteenth and Olive last week. Carnations at five cents per dozen, with two goldfish thrown in. Kelley Floral Co. and Joseph Goldbach were the belligerents.

J. J. Beneke and Ostertag Bros. had two of the largest horseshoes ever seen here last week at the opening of the National League baseball season—Chicago Cubs versus the Cardinals.

Young & Sons are very busy with seeds and have several large plant orders, as soon as weather permits, to work on.

Grimm & Gorley had a runaway last week, doing considerable damage to their wagon. W. F.

Lawns and Lawn Making.

CONTINUED FROM PAGE 698.

dry. When the raking is finished go over the surface with a light roller and the work is complete.

In sodding a new lawn the same careful preparation of the soil is needed though the surface need not be quite so fine as for the seed bed. All that is needed is that it shall lay even and be in the right condition, not too wet or too dry when the sod is laid. But all the preparation of the soil is useless unless the sod is cut of a regular thickness and this part of the work is most important. The thickness will in some measure depend upon circumstances. Where the sod has to be hauled a long way the custom is to cut it thinner than is otherwise advisable with a view to saving weght. Again some soils on which good sod grows is so thin and so stony below the surface that the operator has no choice in the matter; he has to do the best he can under the circumstances. But where there is a good thickness of soil and not too heavy two inches is not too deep. The grass suffers less in a dry season when cut this depth than when skinned off and the roots cut close up to the crowns. Laying the sod when it is cut is a simple operation. Let each piece be laid within about an inch of the next one as when the roller is applied later the turves are flattened out and if placed close together the edges are apt to ride each other. Any interstices can be filled with loose, fine soil which will wash down with the watering and make a solid sward.

When speaking of lawns one is sure to remember the answer of the English gardener when asked how he managed to have such fine lawns. "We mow them and roll them and roll them and mow them for hundreds of years." This is the secret of the splendid lawns there seen, lawns in which the foot sinks as into a Turkish carpet and the surface of which is as level as a billard table. But in this country something besides rolling and mowing is needed. Too close cutting in the heat of summer is apt to be a mistake and watering is also necessary to maintain its color. In winter, too, protection by means of loose litter is a great help and if neatly placed not more unsightly than the blackish brown mass that the lawn would become without it. But the rolling and mowing are good things nevertheless and must not be neglected.

To return to our lawns from seed, it may be necessary where birds are plentiful to protect the surface with netting or some other way but as a rule this is not needed. When the grass is well up and getting strong there will probably be a crop of weeds as well, no matter how carefully the soil was prepared or how clean the seed. One good weeding by hand if carefully done is a great help and the slight disturbance of the soil caused by the drawing of the weeds is an advantage rather than otherwise to the grass roots. When it can be arranged the first cutting should always be done with the scythe or if with a mower a very light machine with the knives in perfect order must be used and used carefully. By the time the next cutting is due the grass roots will be stronger and a light rolling will not do any harm but will solidify the soil around them. After this careful mowing, rolling and watering will be all that is necessary. With winter protection and summer care a lawn made this way will go on improving each year and be a source of great pleasure to the owner.

CROMWELL, CONN.—A. N. Pierson left for Pittsburg, April 22, by way of Atlantic City.

SALINA, KANS.—Edward Tatro had his greenhouse badly damaged by a hailstorm April 11. About 100 panes of glass were broken but the plants were only very slightly injured. The loss was covered by insurance.

RICHMOND, IND.—Wm. Meine, for years traveling salesman for the Chas. Knopf Floral Co., and now a member of Meine & Noss of the Crystal Springs fishery, was married to Miss Anna Michelsen of Chicago in that city April 6.

YOUNGSTOWN, O.—John Walker reports a fine Easter trade and says it would have been better if the weather had been milder. The principal demand was for lilies and azaleas. Rambler roses and hyacinths did not sell so well as in previous years. Tulips sold well. Mr. Walker will build three houses this year, 32x200 feet, to take the place of five old ones which he is pulling down.

Roses, Carnations and all kinds of Seasonable Flowers in Stock.

WM. F. KASTING CO. Wholesale Commission Florists.
BUFFALO, N. Y.
Florists' Supplies and Wire Designs.

ATCHISON, KANS.—R. J. Groves reports a slight drop in sales at Easter.

GREENWICH, CONN.—Alexander Mead & Son occupied the Abrams building during the Easter week, and did a large business.

SAN FRANCISCO, CALIF.—The business of the late J. B. Boland will be carried on as usual under the name of J. B. Boland, florist.

COLUMBUS, O.—Graff Bros. have leased for five years, with privilege of renewal, the store next door to their present location on High street.

ST. GEORGE, N. Y.—Thos. Adams, who conducts the flower stand at the New York ferry terminal, reports business as unprecedentedly large.

BOISE, IDAHO.—The Bayhouse Floral Co. says the Easter sales this year were fully one-third greater than those of last year at similar prices. Cut flowers were scarce, also some varieties of plants, lilies being the best sellers in the latter, with hydrangeas and bulb stock following in the order named. Carnations had the lead in cut flowers.

SAGINAW, MICH.—The Roethke Floral Co. reports Easter business as about the same as last year with plenty of stock. The cold weather and prevailing high winds hindered delivery. Less church decoration than in former years was carried out, owing, principally, to concerted action by the churches, otherwise trade would have been much greater.

Extra Fancy Carnation Blooms

Cut fresh every day, $2.00 per 100. Special prices on large lots.

Chicago.

USUAL SPRING CONDITIONS PREVAIL.

The market is in good normal conditoin for this time of year. Supplies are large and prices are low. Consequently large lots are forced off at about whatever price the retailers will stand for, and the general market conditions have induced larger buying on the part of many who buy only to fill orders actually in hand when flowers cost more. The volume of business is about equal to that of last year for the corresponding period. American Beauty roses are selling well, but buyers are more exacting as to the quality than they have been. The miscellaneous roses continue in very heavy supply. Killarney is now in very heavy crop with nearly all rose growers. The supply of roses is slowly diminishing owing to replanting in the greenhouses, but this has had no noticeable effect on the market conditions. Carnations are in good supply, but are slightly firmer this week because of the fact that some of the larger growers are now practically off crop. There are, however, enough to go around for all ordinary demands. In bulbous flowers tulips and daffodils are very scarce. This has made iris good property. Fancy snapdragon has also been rather scarce. Callas are in very heavy supply and poor demand. Easter lilies move a little more readily. Some ixias are seen and they make a pleasing variety.

NOTES.

On May 1 the Eaton Flower Shop will open up a new store in the Fisher building, 273 Dearborn street. About June 15 possession may be had of the place at 73 Jackson boulevard, which was recently leased, and after that date both stores will be operated. The present location at 86 Jackson boulevard will be vacated by the end of the present week.

C. S. Griffith will have temporary quarters at 1 North avenue after May 1 and until the new building is completed on the site of his present location at 10 North avenue. He reports having had a big Easter business at his newly opened store in the Plaza hotel.

The Pittsburgh Floral Co. is showing some magnificent vases in bronze that add greatly to the attractiveness of this fine store. One filled with yellow snapdragons and ixias is especially choice. A great variety of high class spring stock is to be seen here.

Jacob M. Prost, assistant to Jens Jensen during his three years as general superintendent of the west parks, will be the first city forester of Chicago, having passed highest in the civil service examinations for the new position.

Twenty-two of the state legislators and park officials last Friday made an automobile trip through part of the territory where it is contemplated to establish a forest reserve park on the outskirts of the city.

Wm. Feniger, of Toledo, O., was in town Sunday to entertain with Miss Lilly Bloom, of Bassett & Washburn's office force, their friends here at the reception announcing their engagement.

Bruno Kennicott is seriously ill at the Presbyterian hospital following an operation for appendicitis. He was last reported as having a fighting chance for recovery.

E. P. Armstrong, of Weiland & Risch's sales force, has purchased the business of the Palace Floral Co., 189 N. Clark street, and will assume charge on May 1.

Rudolph Schile, first assistant gardener, is temporarily filling the vacancy caused by the recent resignation of Alois P. Frey, chief gardener at Lincoln park.

A. Iralson, 588 E. Forty-third street, has sold his business to A. W. Morgan, formerly of Danville, and will move next week to his farm near Wendell, Idaho.

The Florists' Club will meet next week Thursday at the Union restaurant. The proposed new by-laws will be passed to second reading.

Edward Amerpohl's late acquisition of C. Dwight's greenhouses at Janesville, Wis., will give him about 45,000 square feet of glass.

It is rumored on the market that the Schiller estate has acquired an interest in the Chicago Carnation Co., of Joliet.

The Geo. Wittbold Co. is doing a very heavy plant business this season, the demand being exceptionally strong.

L. Baumann, who has been in Cuba for some time, left last week for Baltimore, Md., for a European trip.

A. T. Peterson, of Wheaton, has the sympathy of the trade here in the death of his wife last week.

Otto Benthey has purchased the greenhouses of the Benthey-Coatsworth Co., at New Castle, Ind.

Wietor Bros. have an American Beauty section that is just now coming into very heavy crop.

C. N. Thomas, of the A. L. Randall Co., has returned to his Pennsylvania farm for the summer.

A. I. Simmons has been ill again, a very painful abscess having formed in his ear.

Mrs. O. P. Bassett has been suffering from peritonitis, but is now improving.

Bassett & Washburn are already planting carnations in the field.

L. Coatsworth is very ill with appendicitis.

The Kennicott Bros. Co. has been showing some very fancy blue iris.

Visitors: Fred Rowe, of Bloomington; F. M. Smith, of Smith & Fetters, Columbus, O.

WM. W. ABRAHAMSON

Florists' Purchasing Agent.

For buyers of recognized standing. I will undertake to save money, as well as obtain the most satisfactory stock the entire market affords. Write me about it.

21 Wabash Avenue, CHICAGO.

ROCKFORD, ILL.—John W. Ingalls & Co. have moved their greenhouse to Lawson street.

PLEASANT PRAIRIE, WIS.—Sam Fredson has erected a small greenhouse on his truck farm.

DECATUR, ILL.—Chas. Hander has rented the greenhouses of A. M. Schafer on Balmoral avenue.

NEW CASTLE, IND.—L. A. Jennings has sold his greenhouse range near the Union station to Weiland & Olinger.

BEAUMONT, TEXAS.—The greenhouses of the Southeast Texas Floral Co. are to be considerably enlarged this season.

DES MOINES, IA.—The Lozier establishment will be moved from its present location on Walnut street to make room for a new theater.

NEW CASTLE, IND.—Otto L. Benthey is now owner of the big Coatsworth greenhouse plant. The transfer to Mr. Benthey carried with it a payment of $30,000.

ROCKY RIVER, O.—The Rocky River Greenhouse Co. has been incorporated with capital stock $50,000. C. C. Christensen, H. J. Pease, J. Wind, H. E. Asplin and John Hogg are incorporators.

GRAND RAPIDS, MICH.—The Grand Rapids Greenhouse Co. says sales were very satisfactory, with prices the same as a year ago. Roses were the only short items. All plants were in good demand.

CUMBERLAND, IND.—Very serious floods have occurred here, bridges being washed out and much damage done. Frank Millman's greenhouses on Green street were about the center of the flood in that locality.

ST. PAUL, MINN.—The Gardening Club is a very live institution here. Formed as recently as the latter part of 1908, there are now 132 members, many of them being people of influence in the city. The holding of flower shows at a very small price for admission (10 cents), assisting the park board in its efforts to beautify the city, the formation of school vacation gardens, and other things to help along the line of making this the most beautiful city in the world are among the aims and purposes of the club.

MARKET OVERSTOCKED.

The accumulation of stock reached the proportions of a glut during the past week and prices of roses and carnations were completely demoralized. No 2 tea roses sold for 50 cents per 100 and considerable stock that might have graded higher was included. It was a very good carnation that brought three cents, the bulk of the stock being moved at from 50 cents to $2 per 100. Lily of the valley, which showed strength around Easter, is now down again and $2.50 per 100 is about the best price. Lilium longiflorum and callas are plentiful and very cheap. While a fair price can be obtained for the best gardenias, it is practically impossible to sell the small blooms. Orchids are scarce and consequently prices hold firm at 75 cents to $1 each for cattleyas.

April 26.—There is no improvement in the condition of the market and probably will not be until the weather gets warm enough to put a part of the stock out of business. Very fair carnations sold, April 24, for 25 cents per 100, that being a fair sample of the demoralization in prices of the lower grades of stock; but everything excepting orchids is cheap.

SUNDAY CLOSING.

An agreement has been circulated and generally signed by the wholesale dealers to hereafter close their stores all day Sunday. Heretofore the wholesale stores have been open on the forenoons of that day. But little shipped stock reaches this market on Sunday and doubtless the few growers that send it will cooperate to the extent of shipping so that it will reach here Saturday evening. To accommodate the retailers, it is proposed to keep open on Saturday till 10 p. m. There is much to be said in favor of Sunday closing, and no argument worthy of attention can be urged against it. Viewed as a mere business proposition, it may be pointed out that the New York Cut Flower Co. has always closed on Sunday and is enjoying continued prosperity. The amount of stock sold on Sunday is comparatively small. The retailers, with Sunday closing, would be more liberal in their Saturday buying and should have no ground for complaint if they can buy till 10 p. m. on that day. But over and above these considerations is the higher principle that men need Sunday rest; that time and again it has been demonstrated that more and better work can be done on six days and by resting the seventh.

NOTES.

Newspapers report that the steamship Kaiserin Augusta Victoria arrived at this port with not only mushrooms, lily of the valley and lettuce growing on the sun deck, but with a fine crop of strawberries flourishing nearby. This produce was grown in a greenhouse with big glass portholes on a slanting deck and was in charge of a gardener, a member of the ship's crew. The romancing reporter goes on to state that the Kaiserin will have an orchard of peaches and cherries on the next voyage.

Small red radishes in a fringe of parsley seem like a novel idea in button hole bouquets, but that is what we found Chas. H. Brown making up at his Columbus avenue store April 24. Several sprays of parsley were wired around each radish. They were to be worn at a swell smoker.

Karl Hartmann, a grower of Winfield, L. I., has invented an aeroplane, and he believes when it is finished, which will be in about two months, that he will successfully navigate the air.

Kessler Bros., the Twenty-eighth street plantsmen, say that the cold and wet weather is having an unfavorable effect on plant sales.

Funeral of the Late John Scott.

The funeral of the late John Scott was held from his late residence, 565 Midwood street, Flatbush, Brooklyn, N. Y., on the afternoon of April 23. Though the weather was very inclement, there was a great gathering of members of the organizations with which he had been connected, and of other friends and neighbors. It is doubtful if the funeral of any man connected with the florist business was ever attended by a more representative gathering of members of the craft and allied trades. A number were present from Philadelphia, among them being Robert Craig and Joseph Whillden.

Funeral services at the residence were conducted by Rev. G. Hamilton McClelland, pastor of the First United Presbyterian church of Brooklyn. At Evergreen cemetery, where interment took place, the Masonic fraternity conducted its funeral rites. The floral offerings were exceptionally numerous and beautiful. Several men who have spent their lives in this city and vicinity remarked that they had never before seen so many flowers at a funeral. Each of the organizations of which Mr. Scott had been a member sent handsome designs. Very noteworthy was the tribute of the New York and New Jersey Plant Growers' Association. This was a pall completely covering the casket, composed of red roses, smilax and lily of the valley. It was made by Herman Wipperman of Brooklyn. Another notable tribute was a large standing wreath composed of Killarney roses and heather. There were many other large wreathes, all made up with fine stock. Charles Grant, formerly with Small's, had charge of the floral arrangements at the family home.

Cleveland.

TRADE SLOW.

The trade since Easter has been rather slow. Growers are short in their crop of carnations and roses and will be for some time to come, the hail which accompanied the recent storm breaking much glass. The supply began to lengthen last Wednesday and Thursday and big sacrifices were made to dispose of stock, much of which went on the streets, but Friday's and Saturday's week end bargains again cleaned up the last of a good-sized glut. Prices were very low during the entire week. Smilax has been rather scarce since Easter; violets, though of fair quality, were rather scarce as was lily of the valley. The supply of roses, especially American Beauty, far exceeded the demand, choice Chatenay and Killarney going in job lots at very low prices. Pansies are coming in strong, but are not much in demand, quality fair. Daisies are selling well at fair prices. Easter lilies and callas are plentiful and a drug on the market, which goes to show that some of the growers did not get them out on time. Dagger and fancy ferns are becoming scarce. Sweet peas, especially lavenders and pink, are good sellers, and prices remain good, 40 cents to $1 per 100 for best grades. Forget-me-not always cleans up at 50 cents per bunch. Asparagus plumosus and A. Sprengeri are plentiful as is adiantum. The new crop of boxwood is exceptionally fine.

DESTRUCTIVE STORM.

A cloudburst, accompanied by hail, lightning, and a gale, struck the city shortly before noon April 21, and those who had greenhouses almost without exception suffered some losses. At the Ehrbar Floral Co., 3033 Lorain avenue, the wind picked up a hotbed sash and hurled it through the top of one of his greenhouses, breaking considerable glass. At Wilhelmy Bros., 2804 Lorain avenue, the big plate glass show window blew out. Isaac Kennedy, a rose grower at West Park, suffered perhaps the most serious loss. The wind carried away the entire roof of his boiler house and hurled it nearly 50 yards; a brick stack on this boiler house blew down and fell across his greenhouses, making a complete ruin. As he is unable to keep fires and his glass is all broken, his roses are exposed to the cold night air and frosts, and his loss will be severe. Mr. Kennedy is secretary of the Cleveland Florists' Exchange and is well known. Charles Bartels of North Olmstead reports that the hail which accompanied the storm ruined about $50 to $100 worth of carnations which he had set out. A. N. Coe, north Olmstead, reports considerable glass broken, and he was telephoning about one-half hour after the storm let up to rush glass to his place. Across the street from Kirchner's, Quincy street, the wind uprooted about 50 trees, and tumbled over many monuments in Woodland cemetery, but Mr. Kirchner's greenhouses escaped, though only about 200 feet from the worst wreck in town. Mrs. Ella Grant Wilson, florist, W. Fourteenth and Rowley avenue, had a brick stack blow over, which fell across one of her greenhouses, completely destroying it. Carl Wilson, a workman in the greenhouse, was caught under the debris and had to be dug out. He was seriously cut and bruised by the wreckage. W. A. Smith, Robinson avenue, reports a hotbed sash was hurled through one of his greenhouses and he lost considerable glass. C. B. Wilhelmy, with greenhouses on W. Twenty-fifth street, opposite Riverside cemetery, reports a big loss in glass. The storm in this end of the town was very severe.

NOTES.

F. Bartels, North Olmstead, is shipping some fine calendula and snapdragon, also daisies, which find a ready market on account of good quality.

Easter lilies and callas are plentiful and a drug on the market, which goes to show that some of the growers did not get them out on time.

G. G. Stehn, 2661 West Fourteenth street, has added a new delivery outfit as his increasing business demands it.

John Blechschmidt, Niles avenue, is going to build three new greenhouses, 25x300 feet.

F. M. Smith of Smith & Fetters, has been in Chicago and thereabouts the past week.

Visitors: B. Healey of the Wax Paper Co., New York.

C. F. B.

RUTHERFORD, N. J.—Wm. H. Lutton, of Jersey City, is building for the Julius Roehrs Co. three houses, 20x150 feet and one 15x75 feet. The Easter trade practically cleaned this firm out of all available stock, but there may yet be seen a fine stock of box and bay trees, just imported as well as a choice collection of orchids and foliage plants.

GRAND RAPIDS, MICH.—The Crescent Avenue Floral Co. reports a five per cent increase in its sales at Easter over those of last year at slightly lower prices. There was plenty of all classes of stock. Anything white in pot plants or flowers sold well, the darker colors not going so freely. The competition of the department stores was keenly felt.

MARKET OVERSTOCKED.

The past week has seen the first real glut of the season; there seemed to be no end to the quantities of flowers coming in, while the demand fell off very rapidly until there was not enough doing to keep half the force employed. Roses were particularly plentiful, American Beauty even being hard to move, and the street men all have jars of good long ones to top off their stock. Carnations are seen in large lots in all the commission houses, these and roses taxing the storage facilities as they have not been pressed before this season. And so it is all along the line. Callas and Easter lilies are stacked high in the boxes. Sweet peas are also seen in quantity, but these sell as well as anything, in fact better than most flowers. Snapdragon is coming from a number of growers, long stems with large heads of bloom, in a regular harlequin of colors, fine for decorating. Spanish iris is in and sells as a novelty. Southern lilac in fair shape has made its appearance and sells well. Planting out has commenced; the bedding plantsmen say it is a little early, but they are encouraged with the way the season has opened.

THE PLANTSMEN.

It is astonishing to see the rapidity with which the houses get filled up after the depletion of the Easter trade. One would wonder where the stock comes from. W. K. Harris has house after house of Crimson Rambler rose, which of late years he has made a mid-season crop, getting it in from the growers as the Easter houses were emptied. Not a plant of this stock will be found here after Decoration day, the plants being all flowered and sold in six weeks. The Robert Craig Co. has the houses filled to the doors again with spring bedding stock, crotons and other interesting things. Several houses of Otaheite oranges are just opening their flowers and a better lot of plants was never seen in this city. They are very shapely and remarkably well set with buds; a hive of bees just outside the houses are busy all day long fertilizing the flowers, they having been found very useful in this respect. A splendid lot of cyclamens from imported seed, the best to be obtained in Europe, is seen here and tens of thousands of Begonia Gloire de Lorraine leaf cuttings. It is a great stock. Jacob Becker has a fine lot of pot roses grown hard and cool. He says the way to cure mildew on pot roses is to place them outside and they will soon lose all bad leaves and get vigorous and healthy.

The Joseph Heacock Co. is busy getting the large stock of kentias in shape for summer; half of the made-up plants are being put in tubs, which Mr. Heacock likes better than pots. They grow better with him and pack and carry better than do pots. A very large number of cattleyas are being put in pots and mounted on a large slat stage, some 4,000 pots, a fine, sturdy looking lot of plants that should help along when they get to flowering. Although the firm is adding to their stock all the time, it appears more difficult to fill orders than when only a few were grown.

NOTES.

Charles M. Keegan of 104 South Thirteenth street has made a proposition to his creditors to settle their bills for 25 cents on the dollar. His statement is: Liabilities, merchandise, $5,274.56, and $1,500 borrowed money, making $6,774.56 in all. Resources, bills receivable, $2,500, and stock and fixtures, $1,180, making a total of $3,680. His attorney advised instant acceptance, as if thrown into bankruptcy there would be nothing after expenses were paid. This condition of affairs came as a great surprise to the trade generally, as there were no suits pending or evidence of difficulties of this kind.

The trade here were much shocked by the news of the terrible and untimely death of John Scott of Brooklyn. He was always a welcome visitor to this city and expressions of profound sorrow for his wife and family were heard everywhere as the news sped swiftly about. Several from this city attended the funeral.

Snapdragons, sweet peas and American Beauty roses are the features of the Leo Niessen stock at the present time. Carnations galore are also seen, superb stock. A man with a large order who strays in here will meet with a warm reception and go away more than satisfied.

Wm. McKissick & Brothers are handling fine My Maryland and other roses. Sweet peas are also a specialty. Large quantities of flowers are being sold at low prices for special sales.

K.

Boston.

TRADE DULL.

Owing to bad weather and the natural depression of the season the past week was a fearfully dull period. Funeral work, which has been good for the past fortnight, dropped out of sight entirely and in the social line the end of the season seems to have come upon us when least expected. People are making their exits to the country and shore resorts several weeks earlier than usual. Vast shipments of all classes of stock are being received at the market daily, but the greater part brings poor prices and there is a weighty surplus. Prices have dropped steadily in all lines and have reached the lowest for the same season in many years. While shown in great quantities roses sadly lack quality. Outside of American Beauty and White Killarney there is little of really first grade goods obtainable. Both of these varieties are in rare form and hold their prices well. Some excellent carnations are available. Winsor has demonstrated its superiority over all other pink carnations. Violets are still on the market but in limited quantities only. Lily of the Valley is still short and the market is cared for by foreign growers, who are sending excellent goods. Cattleyas are again available after an absence of several weeks and have jumped right to the front of the exclusive list, easily securing $5 per dozen. Hydrangeas are the principal attractions in pot plants.

NOTES.

Arthur Capers, connected for some time past with Wm. Nicholson at Framingham, has branched out for himself, having leased the W. S. Wilson estate on Blossom street, Wellesley, for a period of five years. This plant, long famous for its rose products, will hereafter be devoted to carnations and yellow marguerites, with which flowers the new lessee has had much experience.

At a meeting of the creditors of F. H. Houghton, who has conducted a retail business since the dissolution of partnership of Houghton & Clark, it was voted to accept an assignment schedule and L. B. Woodward was appointed assignee. The business will be continued until a final settlement is adjusted to the benefit of the creditors.

James Harding, formerly grower for W. S. Shedd of Billerica, has secured the Swanson & Dillgren greenhouses in Lowell, which will be stocked with carnations and sweet peas. The Music Hall Market hereby adds another stockholder to its list and the products will be distributed from this center, which is rapidly expanding.

W. R. Morris of Wellesley is planning considerable extensions to his establishment, the new area to be devoted to roses.

Perry Green, Quincy, is showing something decidedly attractive in a splendid stock of ixias.

B.

Pittsburg.

TRADE SLOW.

Conditions still continue sluggish and the supply of stock of all kinds is more than equal to the demand. Prices are being chopped away down, American Beauty roses suffering the most; fine specials were seen selling at eight to ten cents. Carnations are also selling lower; they are being retailed by the street stands at 15 cents per dozen. Some very fine iris, snapdragon, and lily of the valley are seen in this market. String smilax is extremely scarce and is about the only stock that is bringing good figures.

NOTES.

J. B. Murdoch & Co. are cutting quantities of fine Enchantress carnations from their Van Emans place.

J. H. Myers of Altoona is making a specialty of chrysanthemum plants and is doing a good business.

The Pittsburgh Florists' Exchange is handling quantities of American Beauty roses.

Myers Bros., Altoona, are going to move into new quarters in a much better location.

J. M. Jones is hustling again, his enterprise being shrubbery business.

Nixon & Mandes, Greeks of the east end, have gone out of business.

M. F. Stafford is working with J. J. Fuchs of the south side.

Frank Faulk is very ill.

Visitors: Miss Kidd, Beaver; A. N. Pierson, Cromwell, Conn.; Sterns, Sefton Mfg. Co.; M. Shattls of Lyon & Co., New York; J. Ramsfelder of the Manhattan Ribbon Co.; Joiliff, of Schloss Bros.

UNUSUAL WEATHER CONDITIONS.

The season is marked by great variability and sudden and excessive changes of temperature. In one day the mercury fell from 88° to 42°, a variation extremely abnormal for a date so late in April. Unusually high winds have also prevailed, and the general weather tendencies have not been favorable for producing flowers. In the extremely warm days, however, great quantities were forced out and the market was almost overwhelmed, especially with carnations and roses. Trade has not been very active, the post-Easter weddings being practically over, and not much demand otherwise showing itself. Business as a rule continues to halt, there being hesitation and dullness in almost every line which is offered, immediately or approximately by the tariff uncertainties. It is hoped that this matter will be adjusted, so that, before the season of midsummer quietness, there will be some chance for a few weeks of really active trade. On Saturday the curbstone dealers were out in force and got rid of a great many carnations, the lovely day inspiring the passing throng, apparently, to purchase.

S. B.

NEW ORLEANS, LA.—The Metairie Ridge Nursery Co. is credited with the growth of some superb American Beauty roses with 9-foot stems that were finely illustrated in a local paper, showing that good stock can be grown around this city.

—CHOICE—
Carnations, Roses, Beauties,
All Seasonable Flowers.
Pittsburg Florists' Exchange
15 Diamond Sq., PITTSBURG, PA.

SPRINGFIELD, MASS.—L. H. Butts reports a very satisfactory Easter trade and prospects good for a busy season.

WAPPINGERS FALLS, N. Y.—During the severe storm April 19 two large sash from the cold frames were lifted and thrown on the greenhouse smashing a lot of glass and narrowly missing Chas. Hicks who was working inside.

NEW ORLEANS, LA.—Abele Bros. report a 10 per cent increase in sales at Easter over those of last year. Cut flowers were in short supply but there were plenty of plants, especially palms and ferns. Lilies sold well in pots and some were cut from outdoors.

LOUISVILLE, KY.—Mrs. M. D. Reimers reports an increase in trade of 25 per cent over that of last year at similar prices. Good American Beauty roses were scarce, otherwise stock was quite equal to the demand. Choice baskets were called for; choice plants and orchids were also more in demand than ever before.

WENATCHEE, WASH.—Jay L. Holmes and others have filed on 25,000 inches of water in the Icicle river above Leavenworth. Mr. Holmes is a Butte man, and others interested are from Seattle. Included in his plan for the utilization of the water of the river is the making of a large greenhouse. Electricity will be developed to heat the greenhouse, and it is planned to have several acres under glass and thereby be able to furnish the markets of the northwest with vegetables. A large irrigation scheme will be developed later on when the plans are more mature.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

AMHERST, MASS.—The seed house of Lafayette Goodell was destroyed by fire April 13.

SWEET PEAS are looking very good thus far, according to John Bodger, of Gardena, Calif.

THE Department of Agriculture has made a serious attack on the seed industry in the Youth's Companion of April 15.

SAGINAW, MICH.—Miss Isabel M. Swett, long time office manager here for W. H. Grenell, sails for Europe May 15 for a summer vacation.

LONG ISLAND CABBAGE.—J. M. Lupton says that so far as can be told at present the prospects are for a good medium crop, without much surplus or short deliveries.

CLEVELAND, O.—Chas. Jackett and Sidney Roesch, salesmen representing the Fredonia Seed Co., Fredonia, N. Y., engaged in placing box seeds in this city, were struck by a street car and badly injured April 20.

CAMBRIDGE, N. Y., April 26.—While it is time the work was going on, no planting for seed crops has been done as yet, cold winds from the north keeping the ground in such a cold condition that the seed is better in the warehouse.

WORCESTER, MASS.—A loss, estimated at $2,000, was caused by fire in the basement of the Ross Bros. Co.'s seed store. Escaping gas and the fumes from some 50 tons of fertilizer and lime in the basement rendered the work of the firemen very difficult and dangerous. The loss is covered by insurance.

TARIFF.—The latest news regarding tariff matters would indicate good prospects for a final adoption of specific schedules on both seeds and bulbs unless for political or other reasons opposition develops in or through some branch of the treasury department. It is believed that the committeemen in both houses of congress are convinced that the proposed new schedules are quite satisfactory to the whole of the horticultural trade, there being apparently no real opposition to them anywhere.

HENRY H. POOLE, of Kewanee, Ill., for 20 years office manager of the Albert Dickinson Seed Co. in Chicago, is dead of pneumonia.

APPLICATION has been made to restore to the basis of half rates the transcontinental tariff on unsold seeds returned, which reduced rates were abolished January 1 last.

FREMONT, NEB., April 23.—Seedsmen are very busy with a large force placing contracts and shipping stock seed, having a large percentage of the different varieties grown pretty well covered. There are some varieties of cucumber, however, and flint and sweet corn which are proving quite difficult to manipulate, but it is expected that a full acreage will be placed within the next two or three weeks.

C. R. Root.
Manager Barteldes Seed Co.'s Business, Denver.

CHICAGO.—Contract prices on the board of trade April 28 for grass seed were noted as follows: Prime timothy, $3.80 (nominal), white clover, 16.—Miss Sadie E. Northrup, daughter of Jesse E. Northrup, Minneapolis, Minn., has been in the city with friends this week on her way home from Boston, Mass.—John Bodger and wife, Gardena, Calif., registered at the Annex, en route to Europe.—K. Gunderstrup is making a trip to Denmark.

PHILADELPHIA, PA.—Seed potatoes in this section are practically cleaned up and dealers report that they could easily have disposed of thousands of barrels additional.

THE United States consul at Hanover, Germany, reports that according to the views of the German exporters of canary birds, the American people expend annually $7,500,000 for canary bird feed alone. He estimates that there are five million caged birds in the United States.

HOLLAND BULBS.—Prominent growers consider the outlook for the Holland bulb crop very fair as late as April 13. In the vicinity of Haarlem, the splendid spring weather brought out all the early varieties of hyacinths on Easter Sunday and most of the Duc Van Thol tulips. The crocuses were over at date of writing.

NEW YORK.—Ernst Benary, Jr., of Erfurt, Germany, is at the Hoffman house.—This was Manager Scott's busy week at Vaughan's Seed Store, moving from 14 Barclay street to 25 Barclay, corner of Church street.—Samuel Burnett, of Burnett Bros., who has been seriously ill, is rapidly recovering.—The Peter Henderson Co.'s store continues to attract crowds of customers, notwithstanding the building operations going on around it.

California Seed Crops.

Livermore, Calif., April 16.—Seed crops generally are looking fine. We are looking for a few spring showers to help them along. While the rainfall during the past winter was very heavy, the weather has now turned hot and dry and crops that were nearly drowned out are responding nicely to cultivation.—D.

Michigan Peas and Beans.

Farmers have been getting such good prices for their crops that they are not likely to grow any peas and beans of the garden varieties on their own account for the reason that the commercial product of both these crops pays them better from a farmer's standpoint, and they are the closest to the proposition.

The Barteldes Seed Co., Denver, Colo.

The Barteldes Seed Co. of Denver, Colo., has purchased the lot on which its poultry department is situated, thus removing the last obstacle to the erection of a large five-story building which the company contemplates as soon as its rush season is over. The building now used as headquarters will be used as a warehouse when the new building is erected. The present building is only five years old and no one thought at the time of its erection that the business would outgrow it so soon. It is up-to-date in every particular and capable of withstanding a load of 1,500 pounds on every foot of floor and wall space. Every facility is there to handle grain and seeds; the railroad cars run to the door and are "tapped" and the grain run through chutes and elevators wherever it is wanted without being touched by hand. There are 72 employes in the building, and as giving an idea of the scope of the business, one day recently orders were filled for Sweden, Chile, Argentine and Peru, to say nothing of a heavy tonnage going west of the Mississippi river. The trade in florists' and poultry supplies is very large.

Transplanting.

Much of the success in gardening nowadays depends upon successful transplanting. By transplanting we are enabled to force the season, either early or late, double crop the land, and, most important of all, secure accurate spacing of plants in order that we may produce maximum crops. It follows then that he who is a thorough plantsman has an advantage over his less skilful competitor. The first transplanting, to produce good plants, is generally done in greenhouses, hotbeds or cold frames. Here it is best to employ screened earth as it facilitates work greatly. A fundamental rule is that earth must be moist before planting—if not so, better wait, water and work over until evenly moist all through. Seedlings dibbled into dry earth never do so well, no matter how soon they are watered after planting. Sometimes when using beds a second time the earth is dry below, which is especially harmful.

There are several methods in common use—dibbling out singly, dibbling out bunches, and heeling in. Each has its proper place. To produce the best plants, the single dibbling is of course best. But often we have neither the time, nor the space, nor the help, and something must be done with the seedlings, when dibbling out in small bunches, say three to five plants each, is a great help. Some plants can be heeled in very successfully. We always heel in celery plants. By heeling in we mean to dig shallow furrows across the bed, and then lay the little plants in all evenly spaced and then cover with earth and press firmly. It is a very good method for inexperienced help. The proper time to transplant seedlings is when the character leaf appears, but often we cannot do as we would like to and must resort to all kinds of methods. An excellent way to stop seedlings from further growth is to root prune them. Here is where the row-seeding is so superior to broadcasting. Supposing seedlings are in rows 2½ or three inches apart—it is very easy to run a common pruning knife under the rows so as to cut the roots half an inch under ground. It will not only stop them, but at the same time will prepare them for the move by forcing them to produce new roots. This is an excellent treatment for tomato plants. We have often produced such root pruned seedlings that were superior to common transplanted stock.

In the field a great deal depends upon the land, the season, the weather, condition of plants, and the help at hand. We use various tools, from the plow to the dibble. Sometimes a spade is the best tool, using it as do strawberry growers—one man thrusts the spade straight down, opens a V-shaped hole, while another inserts the plant the moment the spade is withdrawn. To tighten the roots run the spade in a few inches away from the plant and force the earth against the roots. In hard land, a subsoil plow should precede this spade method—this plow will throw no furrow—it simply cuts a slot and loosens the ground. Where the ground has a dry dust mulch we like to trowel plants in. This enables the operator to scrape away the dry earth so none will touch the roots. Trowel planting is hard work, but is superior to most other methods.

In mellow, moist soils and suitable weather, a common pointed stick, say a piece of broom handle, makes a good tool. The operator should be instructed to tighten plants well and deeply, so roots are not left hanging in a hollow. This is the great defect of dibble planting. Where land is too hard for dibble work we sometimes employ a spud, a strong handle, such as a fork-handle shod with a flattened point, such as a piece of 1¼-inch pipe flattened and welded together; at the proper depth for planting bore a hole and drive in a ⅝-inch bolt for a foot-rest, which will also be a depth gauge.

For pot plants above 2-foot rows we prefer to open a furrow with a horse tool, and close same way; for narrower rows, use a wheel hoe. A single wheel hoe, with one cultivator tooth and the drill marker, makes a grand tool to help the planter. We employ this to open narrow rows for setting out small plants like onions, beets, lettuce, etc. Sod plants, such as melons, cucumbers, sweet corn, we simply set down flat on top of ground and either plow to or hoe up by hand. Plants should never be dug dry. Water thoroughly some time before digging. Do not pull out, but lift with fork or spade, to get the roots. Sprinkle after digging. Protect from sun and wind. When planting, tighten earth around roots thoroughly. If to be watered, leave a depression near roots for water; hoe after watering and cultivate at once.

MARKETMAN.

Onion Growing in Colorado.

The onion thrives best in a cool, moist soil which is easily kept in a mellow condition. Such soils are confined mostly to river bottoms, and they contain more vegetable matter and sand than is commonly found in mesa and upland soils. Large amounts of decayed vegetable matter seems to be essential to the best development of this crop. Heavy soils are not suitable for onion growing, for the reason that it is difficult to make a good seed bed, and the surface is likely to bake and crack, much to the injury of the young plants. It is difficult to get a uniform growth of onions on such soils, says W. Paddock in News Notes of Colorado Agricultural College, consequently a large per cent of scullions usually results.

The land for onions should be heavily fertilized with well-rotted stable manure, and plowed in the fall or very early in the spring; it is then put in the very best condition possible for planting. The onion seed should be sown early, much of it being planted in March, and all should be in the ground by April 10. Early seeding is necessary, for the reason that the bulbs should make most of their growth before hot weather comes on. The seed is sown about one inch deep with hand drills, using from 3½ to four pounds per acre.

The distance between the rows depends upon the system of irrigation to be followed. If the field is to be flooded, the rows are usually made 12 to 14 inches apart, but if the furrow system is adopted, the ground is plowed out in ridges about 30 inches apart and then flattened to about nine inches on top. Two rows, three inches apart, are then planted on each ridge, the furrows between the double rows being used for irrigation and cultivation. Most growers try to plant the seed so that the plants will be 1½ inches apart, so as to avoid thinning.

TO THE TRADE

HENRY METTE, Quedlinburg, Germany.

Trade Mark. **American Spawn Co., St. Paul, Minn**

Cultivation and weeding are begun by hand as soon as the plants appear above the ground. The hand wheel hoe is used, but the thinning and some of the weeding must be done by hand. If good onion soil has been selected, but little irrigation will be needed in the fore part of the season. In the heavier soils, where the water is run in furrows between double rows, the irrigation is begun earlier, and every effort is exerted to keep the ground moist.

Harvesting is begun by September 15 and the crop is usually all out of the field by the middle of October. The bulbs are pulled by hand and thrown into windrows. After they have become completely cured, the tops are removed, and the onions are sorted and sacked. Topping is done by cutting off the tops about half an inch above the bulb, taking care to make a smooth cut so as not to injure the outer coverings. The principal markets for Colorado onions are in Texas, though some are sent as far east as St. Louis.

A great many varieties have been tested, and the so-called new onion culture has been attempted. The numbers have been gradually narrowed down to one, the Yellow Globe Danvers. This variety seems well adapted to our conditions of soil and climate. Good seed is requisite to success. Home-grown seed from selected bulbs has given by far the best results. The cost of growing an onion crop may be estimated at about $60 an acre.

Prices of Indoor Fruits and Vegetables.

The prices of indoor fruits and vegetables at leading points April 24 were as follows: New York, cucumbers, 40 to 75 cents per dozen; lettuce, 75 cents to $1.25 per strap; mushrooms, 20 to 55 cents per pound; mint, 40 to 50 cents per dozen bunches; radishes, $1 to $1.75 per 100 bunches; rhubarb, $2 to $5 per 100 bunches; tomatoes, 10 to 20 cents per pound; grapes, 60 cents per pound. Chicago, cucumbers, $1.25 to $2 per dozen; head lettuce, $1.50 to $2.50 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 40 to 60 cents per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 40 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound. Kansas City, cucumbers, $1 to $1.50 per dozen.

C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-Presdent; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June, 1909

WELLINGTON, KANS.—Chas. Worden of the Worden Nursery will build a new tree storage house this season 80x120 feet.

THE first number of the Ohio Forester has reached us. This little publication is the official organ of the Ohio State Forestry Society.

WEST CHESTER, PA.—The nurseries in this section report the season just closing as one of the best, more stock having been shipped than for many years.

NICHOLS, MO.—L. B. Baxter, a nurseryman, died April 21 of pneumonia after a brief illness. He was about 48 years of age and leaves a wife and sister.

WILKESBARRE, PA.—The county commissioners recently awarded eight contracts for shrubbery and plants to aid in Warren H. Manning's decorative scheme, the total cost being about $440.

FREMONT, NEB.—Local nursery shipments are going north now, especially to points in the Dakotas and Minnesota. The movement south, which has been very active, has practically ceased.

ARBOR DAY in Chicago was celebrated April 23, by the planting of many trees by the school children in various parts of the city. The reading of Gov. Deneen's Arbor day proclamation was a feature.

BOSTIC, N. C.—All of the stock planted early at the Valdesian Nurseries is looking well, although the weather has been a little too dry for the last few weeks. The prospects for a fine crop of small fruits in this section are very good.

ACCORDING to a recent decision by the board of general appraisers orange and other fruit trees imported for cultivation by Texas fruit growers are allowed to enter this country free of duty. The trees in question had been classified as "nursery or greenhouse stock" instead of "fruit plants for cultivation."

ALL nurserymen should see that their local newspapers make use of the excellent and seasonable articles issued regularly by the National Council of Horticulture. These articles, written by competent horticulturists are reliable and valuable. Newspapers may secure this press service free on application to Jas. H. Burdett, 17 W. 104th place, Chicago.

HARTFORD, CONN.—Alexander Cumming, Jr., who was until recently superintendent of maintenance for the city parks, here, has gone to Seattle, Wash. Mr. Cumming's resignation was looked on with regret by all connected and was considered a great weakening of the force. Mr. Cumming will probably be connected with the Seattle exposition. His successor here is Frank D. Sargeant.

Hedge Plants.

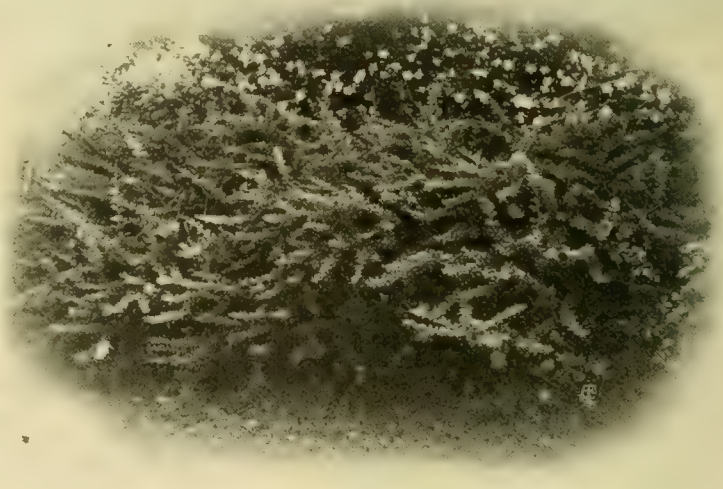
There seems to be an increasing demand for hedges. Whether this is due to more formal work in gardening or to a laudable desire to substitute living fences for wood and stone, I do not know; but we have received an unusual number of inquiries, during the past year, in regard to hedge plants. To meet this demand the nurseries have growing California privet by the million. This plant has many good points. It is very easily and cheaply propagated, and so quickly grown to planting size that it can be sold at a very low price. It takes naturally a good form and stands the shears well. It is nearly evergreen, and it is comparatively free from attacks of insects and fungi. But, notwithstanding all these advantages, the fact is that it is not reliably hardy in this latitude. There is, fortunately, an abundance of other shrubs well suited for the purpose, and even where the privet is hardy we would plead for greater variety. It is possible to get too much of a good thing.

In looking over the crop of catalogues of the current season, I noted a classification and list of hedge plants in that of the Wm. H. Moon Co. which struck me as being ingenious and quite suggestive, and I have taken the liberty to quote from it.

(1) Ordinary hedges—Such as property boundaries. Usually of medium height and dense thick habit.

(2) Defensive hedges—Used as fences to keep off trespassers and to turn stock. Plants with thorns usually preferred.

(3) Screens—Used to hide objectionable objects; clothes yards, kitchen doors, etc.



BERBERIS THUNBERGII.
One of the Hardiest and Finest Dwarf Hedge Plants.

(4) Wind-breaks—Used to shut out wind from other places. Evergreens almost always used for this purpose.

(5) Flowering hedges—Almost all flowering shrubs are suited for this purpose.

(6) Edging—Low hedges to edge walks, to border cemetery lots and similar places.

In the list of plants that follows, the different varieties are preceded by numerals that indicate the classification that they may be suitably used in. For instance, all varieties preceded by the numeral I are good plants for ordinary hedges. Some varieties are useful under several classifications.

EVERGREENS.

5, 6 Azalea amœna. I, 6 Buxus sempervirens. 6 Buxus suffruticosa. 6 Ilex crenata. I, 3, 4 Picea excelsa. 4 Pinus Austriaca. 4 Pinus Strobus. 4 Pinus sylvestris. I, 3 Retinospora plumosa. I, 3 Retinospora squarrosa. I, 3, 4 Thuya occidentalis. I, 6 Thuya Geo. Peabody. 6 Thuya globosa. 6 Tsuga Canadensis.

DECIDUOUS SHRUBS.

I, 2 Berberis Thunbergii. I, 2 Berberis vulgaris. I, 2 Carpinus Americana. I, 2 Carpinus Betula. 2 Cratægus coccinea. 2 Cratægus crus-galli. 3, 5 deutzia. I, 2, 3, 4 Fagus sylvatica. I, 3, 5 hibiscus (althaea) in variety. 5 Hydrangea paniculata grandiflora. I, 3 Ligustrum Ibota. I Ligustrum Regelianum. I, 2, 3, 6 Ligustrum ovalifolium. 2 Rhamnus catharticus. 5 Rosa rugosa. 5 spiraea, in variety. 3, 5 syringa in variety. 5 Virburnum plicatum.

The above lists embrace quite a variety of plants adapted to a wide range of climate. To make the lists complete for the United States would require the addition of many species and it contains several that can hardly be recommended for the northern tier of states. It was of course made to apply to the stock listed in this particular catalogue. I do not know that I would feel like criticising any of the evergreens named, except as to their hardiness, and would add but a few. The yew makes an admirable hedge and Berberis aquifolium should also be included. If one were preparing a list to include the southern states the list would include many other species.

In the deciduous list a great many might be added, as explained by the author of the catalogue above quoted. Probably Cratægus oxycantha should be added in classes I, 2 and 5; Hydrangea arborescens grandiflora in class 5; Japan quince in classes I, 5; and the locust and the Osage orange in classes 2, 5. Many of the roses which are suitable for hedge use should probably be included in other classes as well as in 5. Some of them make good protective hedges or fences, some make excellent screens and some would drop into class 6 nicely.

One of the most beautiful hedges I ever saw was of our native hemlock, and it is a good plant in sheltered positions. Our white pine makes a most at-

tractive hedge and stands the shears remarkably well. In many places the mulberry is used to advantage. Many hedges fail not because of the character of the material used but because of the lack of proper care in planting and during the earlier years of their growth. Hedges which are intended to be maintained in a symmetrical form must be carefully pruned and shaped from the beginning and all need clean cultivation and attention until they get full possession of the ground. It is well to bear in mind that summer pruning of hedges is, with many kinds, quite as important as winter pruning, and sometimes summer pruning is all that is necessary.

Possibly another class might be added to those mentioned above, embracing those plants which by reason of their showy and persistent fruit are attractive after the leaves have fallen and amid the snows of winter. First in this class might stand Berberis Thunbergii, closely followed by some of the single roses, the Indian currant, deciduous holly, euonymus, etc. For winter hedges, too, plants having highly colored bark like

the dogwoods and willows give most cheerful effects. If there were more good examples of hedges to be seen I believe the demand for hedge material would be very greatly increased.

JOHN F. COWELL.

Protects Nursery Stock.

Albany, N. Y., April 21.—Gov. Hughes has signed Senator Raines' bill, appropriating $25,000 for a more stringent supervision by the state agricultural department to prevent the bringing of diseased nursery stock into this state from other states, and for the prevention and extirpation of diseases and insect pests infecting all trees, shrubs, plants and vines. The bill provides for compensation to owners of property destroyed at a rate to be agreed upon between the commissioner of agriculture and the owner or by arbitration, and for the destruction not only of infected stock, but of boxes, retainers and packing material which may have contained such stock.

Denver to Have an Apple Show.

On April 21 there convened in Denver a delegation of men representing the chamber of commerce and organized an association to conduct a national apple show which will be known as the Colorado national apple exposition. It will be held in the large auditorium which is famed for holding the Democratic convention last year, having a seating capacity of 12,000. There will be $25,000 offered in premiums and exhibits will be asked for from all parts of the United States. It will be a hot competitor of the recent apple show held in Spokane. Suitable arrangements are being provided to make this a grand affair. The date in all probability will be from Dec. 6 to 11, anticipating that the Western Fruit Jobbers' Association will convene in Denver at the same time. The officers elected are: C. R. Root of the Barteldes Seed Co., president; C. L. Oliver, acting secretary of the Colorado Horticultural Society, secretary; W. F. R. Mills, treasurer. Mr. Mills has long been recognized as a public spirited man, being at present secretary of the chamber of commerce and the Denver convention league. There will be an executive committee of seven to be chosen from the leading horticulturists of the state.

Guaranteed just as represented. Reference: National State Bank, Camden, N. J.

Dreer's Novelties in Hardy Perennials

New or Little Known Varieties Worthy of Special Attention.

LUPINUS POLYPHYLLUS ROSEUS.

Anchusa Italica Dropmore Variety. A grand improvement on the type, with intense deep blue flowers, $2.00 per doz.; $15.00 per 100.

Anthericum Liliastrum Giganteum. A giant form of the N. Bruno Lily with very large white flowers, $2.50 per doz.; $20.00 per 100.

Aquilegia Helenæ. One of the best of the Columbines, large pretty blue flowers, with large white corolla, 85 cts. per doz.; $6.00 per 100.

Campanula Persicifolia Humosa. A very large semi-double form of the peach leaved Campanula, flowers of a pleasing shade of blue, $1.50 per doz.; $10.00 per 100.

Delphinium Gold Medal Hybrids. The finest strain ever offered in mixed varieties, $1.25 per doz.; $8.00 per 100.

Delphinium Belladonna. The freest flowering of all Delphiniums, it is never out of bloom, beautiful turquoise blue, $2.00 per doz; $15.00 per 100.

Funkia Robusta Elegans Variegata. A decided improvement on all variegated forms, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Gem. A new variety that originated on our trial grounds. Flowers old gold, suffused with bright terra cotta, changing as they mature to a wallflower-red, $1.50 per doz.; $10.00 per 100.

Helenium Riverton Beauty. Another variety which originated with us, quite distinct in color, which is lemon-yellow, with a large disc of purplish-black, $1.50 per doz.; $10.00 per 100.

Helianthus Sparsifolius. The most desirable of all the hardy sunflowers, especially valuable as a cut flower, 85 cts. per doz.; $6.00 per 100.

Four Valuable Hemerocallis. The four varieties here offered are great improvements upon the well-known Yellow Day Lilies.

Aurantiaca. Very large, bright, orange-yellow, sweet-scented flowers, 15 cts. each; $1.50 per doz.

Aurantiaca Major. Large trumpet-shaped, sweet-scented, deep orange flowers. Requires protection, 35 cts. each; $3.50 per doz.

Florham. Large golden-yellow sweet-scented flowers; very free flowering, 15 cts. each; $1.50 per doz.; $10.00 per 100.

Gold Dust. Large golden-yellow flowers, 15 cts. each; $1.50 per doz.

Incarvillea Delavayi. Popularly known as the hardy Gloxinia; extra strong roots. $2.00 per doz.; $15.00 per 100.

Iris Pallida Dalmatica Folia Variegata. A strikingly handsome variegated leaved form of this beautiful blue Iris, 35 cts. each; $3.50 per doz.

Gypsophila Paniculata Flore Plena. This is a perfect gem and as a summer cut-flower invaluable. We have a large stock of strong roots to offer this season, $2.00 per doz.; $15.00 per 100.

Lupinus Polyphyllus Roseus. This is a most attractive rosy pink form of Lupinus, producing gigantic spikes of flowers, $2.00 per doz.; $15.00 per 100.

Pentstemon Gentianoides Sensation. Gloxinia-like flowers in a variety of bright colors, including rose, cherry, crimson, purple, lilac, etc. For bedding they rival Phloxes, Petunias, etc. Not quite hardy, 3-inch pots, $1.00 per doz.; $7.00 per 100.

Primula Cortusoides Sieboldi. These are not so well known as they deserve; they are of free, vigorous growth, and can be flowered in pots in early spring, and respond quickly to forcing when placed in a temperature of 50 degrees, forming pretty pot plants in a short time, making excellent window plants, which meet with ready sale when in bloom.

We offer six distinct varieties, from pure white to the deepest rose in color, $1.50 per doz.; $10.00 per 100.

Rudbeckia Rays of Gold. In this new variety we have a refined form of the popular "Golden Glow," with which it is identical in color, habit, etc., but the flowers have narrower petals, full to the center, forming a perfect ball of gold. $1.50 per doz.; $10.00 per 100.

Stokesia Cyanea Alba. A white form of the popular blue Stokesia, equally valuable and a desirable addition; strong plants, $1.25 per doz.; $8.00 per 100.

Choice New Trollius. (New Globe Flowers.) The five varieties listed below are decided improvements on all sorts heretofore offered; of exceptional large size and good rich colors.

Gotterfunke. Large open orange-yellow flowers.

Helios. Very free flowering, pure yellow, on strong branched stems.

Leuchtkugel. One of the finest deep orange reds.

Lichtball. Large, globular orange-yellow flowers on stiff stems.

Salamander. Soft orange-colored flowers of globular form.

35 cts. each; $3.50 per doz. The set of 5 for $1.50.

Cincinnati.

STOCK OVER PLENTIFUL.

Undoubtedly when the growers receive their returns of last week's sales they will come to the conclusion that there was a good surplus of flowers in this city. We cannot say that business is poor for there is quite a volume of business done but there are as many flowers again as are needed. About the only shortage is in sweet peas and lily of the valley; the demand for these is good and more could be sold. Roses of all kinds are in ample supply and a good many are sold by the jar. The real glut however is on carnations which were sold as low as 50 cents per 100. As stated last week carnations are coming to this market from all quarters and it is an utter impossibility to sell this shipped in stock at anything like living prices. Bulbous flowers are nearing the end and last week there was quite a call for this line of goods. Green goods of all kinds is getting scarce even down to ferns, the price of which has gone to $2.50 per 1,000. Lilium longiflorum and callas, have been in oversupply since Easter although some of our most prominent growers claim that the crop is going off. Snapdragon, the quality of which never was better, has been good property. Daisies, pansies and other spring flowers meet with a good demand.

DESTRUCTIVE HAILSTORM.

A most disastrous hailstorm passed over Westwood, Mt. Airy, College Hill, Hartwell, Wyoming and Sockland last Wednesday afternoon and the glass in all the greenhouses in its path was smashed to atoms. Probably the heaviest loser is W. K. Partridge who lost 30,000 feet with no insurance. J. Voltz & Son in Westwood lost about 400 panes, Jos. Brigel, Mt. Airy, about the same; Max Rudolph about 2,000 feet, George Corbett, 7,000, George Magrie, McAvoy Bros., Jos. Linfoot, Harry Corbett and Walter Gray all suffered an enormous loss as did J. Conger of Hartwell. It is rather difficult to get an estimate of the entire loss as reports are rather conflicting. However, the majority of growers caught, we regret to state, were not insured and this will be a hard blow, as some of the stones that fell were as large as hen's eggs and did considerable damage to the stock which is just ready for spring sales. George Corbett telephoned the writer about 20 minutes after the storm and said he had already purchased his glass and his men were then at work cleaning up the broken glass. "Some hustling that."

NOTES.

Mrs. Henry Glins has sold her store on Upper Vine street to Carl Yager, a young man who has been in her employ for some time. As this is an old stand Carl ought to do well as he is an ambitious chap. Mrs. Glins will leave in the near future to visit her sister in Boston, Mass.

Tom Windram and Will Murphy left Tuesday morning for Mr. Windram's asparagus farm in Florida. They will be gone about two weeks and Mr. Murphy will call on some of his customers on his return trip.

Weiland & Olinger state that they have bought the Jenning's greenhouses at New Castle, Ind., and will use the same for growing green goods such as Asparagus Sprengeri, A. plumosus and smilax.

Clarence Ohmer of Gillette and Ohmer left April 20 for Florida to recuperate as he was run down after a season's strenuous business and we hope that the rest will do him good.

Miss Adar Kresken who has been under the weather is, we are glad to report, convalescing.

S.

MARY TOLMAN

A New Light Salmon Pink Carnation.

Of a somewhat warmer tone than Enchantress, and does not fade on the edge of the petals, having a clear, even shade all over the flower, which measures from 3 to 3½-inches, although 4-inch flowers are very common. The stem is long and stiff, holding the flower perfectly erect. The calyx is very strong, and as a producer, it comes early, is very free and continuous.

Orders booked now for January 1910 delivery.

$12.00 per 100; $100.00 per 1000.

CHICAGO CARNATION CO., Joliet, Ill.

A. E. HUNT & CO., Evanston, Ill. **HUNT BROS., Park Ridge, Ill.**

Sangamo

Is the new, brilliant, glistening **PINK CARNATION** shown at Indianapolis, and awarded the A. C. S. Certificate of Merit, attracting the attention of every carnation grower on account of its very pleasing color, long stiff stem and well formed flowers, measuring 3 to 3½ inches. The calyx is strong, and as a producer it cannot be excelled. Orders booked now for January, 1910, delivery.

$12.00 per 100; $100.00 per 1000.

Grown and disseminated jointly.

A. C. BROWN, Springfield, Ill. **CHICAGO CARNATION CO. Joliet, Ill.**

A New Seedling Carnation

Conquest

Light flesh pink, overlaid with a deep rose pink, the color extending over the petals from the center almost to the edge. It does not fade, making it a most beautiful and attractive flower. Its habit is somewhat on the order of Lawson, although the stem is somewhat longer and very stiff. The flowers are well filled and nicely formed, which add to its attractiveness. Without a doubt it will be the most attractive variety as well as the most profitable variety to be disseminated the coming season. This is a variety which the florists have been wanting ever since they discarded Prosperity, as it is so far superior to all others in this class.

Orders booked now for January 1st, 1910, delivery.

$12.00 per 100; $100.00 per 1000.

A BUSY WEEK.

All experienced an exceptionally busy week, owing to the numerous weddings, luncheons, dinners and funerals.

CLUB MEETING AND BANQUET.

After a short meeting, on the evening of April 20, the members of the Florists' Club, with their wives, sweethearts or friends made merry in their own distinctive way at the annual banquet held at Congress hall. The banquet room was beautifully decorated with groups of palms and flowering plants. The tables were decorated with vases of Killarney roses, while from the balcony, hidden behind an enormous bunch of American Beauty roses, came the sweet strains of Pistoria's band. Fred H. Kramer, recently elected president, announced that Wm. Gude would act as toastmaster, and the way he handled the matter met with the hearty approval of all. One of the most surprised men at the banquet was George C. Shaffer, the retiring secretary of the club. Mr. Gude spoke highly of the many things he had done on behalf of the club and presented him with a handsome silver bread tray. The retiring secretary expressed his surprised thanks. Other speakers were Peter Bissett, former president of the club, and I. Rosnosky, Philadelphia. The newly elected secretary, O. A. C. Oehmeler, congratulated the members on the growth of the club and the cleverness of the banquet arrangements and promised to do all he could to advance the growth of the club. Among the foreign speakers were L. G. Eutz, a grower of Boskoop, Holland, who made a hit, regardless of his excuse that he could not speak English as well as those about him. Henry Kallen of Belgium also expressed his pleasure at being a guest of the club and at a late hour the merry party departed for home.

G. S.

BALTIMORE, MD.—John Cook, the veteran rose grower, has been confined to his room with neurotic rheumatism the past three months.

ANNOUNCEMENT

We have arranged with **MESSRS. PATTEN & CO., Tewksbury, Mass.,** to grow part of the stock of our

New White Carnation Shasta

and to assist us in disseminating it next season, 1910. Orders entrusted to them will receive the same careful attention as those sent to us. We have 12,000 plants between us.

Shasta scored 89 points at the A. C. S. Convention, Jan. 27-28, 1909, and was generally conceded to be the best looking new variety in the whole show.

It Is a Money Maker for both Grower and Dealer.

Orders are being booked by Messrs. Patten and ourselves at **$12.00** per 100; **$100.00** per 1000. Dealers will please write for discounts.

ALBERT M. HERR, Lancaster, Pa.

FULTON, ILL.—McKee & Preston, a new firm in the florist world, will build a new greenhouse 16x250 feet.

SAN DIEGO, CALIF.—A rose show will be held under the auspices of the Floral Association in the Union building May 7-9.

DANVILLE, PA.—J. R. Jackson, of the Castle Grove Greenhouses, has resigned his position and returned to his home in Newport, R. I.

DUBUQUE, IA.—Professor B. J. Horchem last year purchased a small neglected farm for the boys of his school which has been greatly improved owing to its being run as a school vacation farm. He now proposes to turn it into a permanent vacation school farm. The farm "before and after" is well illustrated and described in the Journal of Education.

WASHINGTON, D. C.—The drowning of Joseph H. Painter, botanist, and Robert S. Wallis, 16 years old, on December 6 last, as reported in our columns, while canoeing on the upper Potomac, was recalled April 16 by the finding of the body of Painter. The discovery of the body was made by two men who were at work on the bank of the river protecting their property from the high water, and these secured it with a rope and then notified the police.

HEADQUARTERS FOR

ARAUCARIAS

The Only Beautiful Decorative Plants for Your Lawn, Garden or Porch.

"By jingo," was the remark of a bright looking gentleman as he stepped with his lady friend into one of our Araucaria houses. "If these are not the best shaped and finest looking specimens of **Araucaria Robusta Compacta, Glauca** and **Excelsa** I have ever seen *then I am a shade.* ☞ Just look! What a sight this time of the year, one as nice as the other!"

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the nineteenth century, that our name, as well as the Araucaria itself, shall never die out and is still fresh in people's minds same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen. As big as an elephant, for 75c; as big as a jumbo, for $1.00; and as big as a holy terror, for $1 25 to $1.50.

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high same in width, $1.50, $1.75, $2.00, $2.50 to $3 00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety very graceful and beautiful. Specimen plants 6-7 8 in pots, 4-5 year old, 4 5-6 tiers 20-25-30-32 in high, same in width, $1.50 $1.75, $2.00, $2 50 to $3 00 each.

Araucaria Excelsa, 3-4-5 year old 4-5-6 7 tiers 6-in. pots 20-25 30-35 in high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

Scollay's Plant Sprinklers

FOR CUT FLOWER TRADE. Also the

Scollay Putty Bulb

FOR GLAZING GREENHOUSES, Etc.

The Scollay Plant Sprinkler is in its 35th year. Thirty-five years of experience should count for something—we have given attention to quality in every respect—making of seams—selection of high-grade rubber. During these 35 years there have appeared more than 35 imitations, all the way from hand levers—tee ends—breakable tops down to Chinese and Boston Blowers—and, after all, the fact remains the same, that we are still the real thing in rubber sprinklers, etc. No one is so new or old in the cut flower trade that he can keep shop without **Scollay's Rubber Plant Sprinklers.** Every sprinkler guaranteed free from imperfection in manufacture.

The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

THE foreign trade of the King Construction Co., North Tonawanda, N. Y., is evidently growing and it has now extended to England. There must be some radically good points about a greenhouse that so appeals to that most conservative of men, the English gardener, that he orders an American structure.

To Remove Putty.

ED. AMERICAN FLORIST:—

I have recently bought a lot of old greenhouse glass. How can I remove the old putty from the glass? I have tried muriatic acid without any result. Any information you can give me will be appreciated.

E. W.

One of the best methods of removing old putty from greenhouse glass is to soak the glass in caustic soda solution, using 15 pounds to 50 gallons of water. After two or three days the putty can be scraped off with a chisel.

L. R. T.

Greenhouse Painting.

ED. AMERICAN FLORIST:—

I have a house which stands 6½ feet to the gutter from the ground and 17 feet to the ridge, on which I find it very difficult to paint and repair. I would like to know the best and simplest contrivance for climbing around the roof.

B.

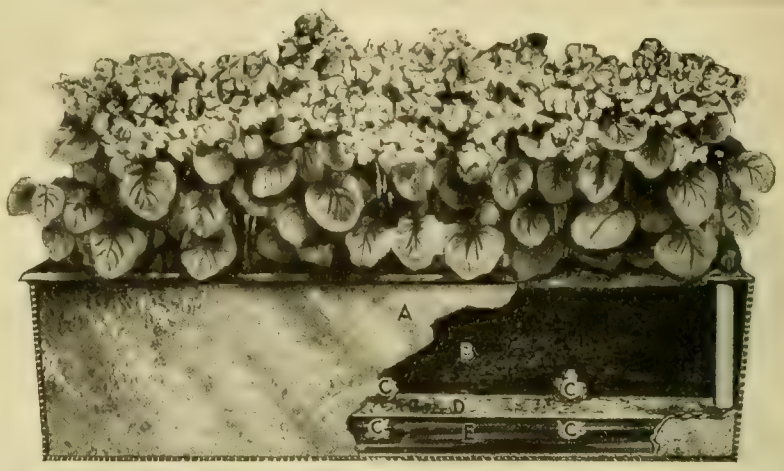
If the gutter is one that will support the lower end of a movable staging and prevent its sliding off the roof, a very simple arrangement is to take a 12-inch board, long enough to reach from the gutter to within a foot of the ridge. To keep this off the glass fasten 2x1-inch strips on the underside every four feet. These should be long enough to rest on two of the sash-bars, or perhaps three or four if the sash-bars are weak. On the top of this staging nail cross strips about 15 inches apart as foot-holds. If there is very much repairing it is sometimes well to make the platform a little wider, with more substantial strips on the underside.

In case there is no gutter to serve as a support for the staging, it is sometimes possible to prevent its slipping by nailing a temporary strip upon the plate for this purpose, or a support something like a step ladder can be attached to the lower end of the board, at such an angle as will allow the platform to rest upon the roof and at the same time both prevent its sliding and make it easy to get from the ground to the roof of the house.

L. R. T.

Self-Watering Flower Boxes.

A device that has of late been making some headway, especially in Chicago, where it has been best advertised in the local papers, but as well throughout the country by means of general magazine advertising, is the so-called Illinois self-watering flower box. Each box has a false bottom under which the water circulates, fed from above through a metal tube in one corner. It is supplied to the plants through sponges placed in one or more small holes drilled through the false bottom. Chief among the advantages claimed for this contrivance is the practical prevention of the neglect, or



ILLINOIS SELF-WATERING FLOWER BOXES

Will double your plant sales. They guard against your customers' neglect or his over-attention, which is worse. **Guaranteed Not to Leak.** Are proof against dirt on sill or porch. Write for descriptive list of boxes, hanging baskets, jardiniere pans, etc. and trade discounts.

WAGNER PARK CONSERVATORIES,
Sidney, Ohio.

—what is sometimes worse—over-attention, on the part of amateur growers. The boxes all being of metal the drainage, of course, is not the usual dirt-making contrivance ordinary wooden boxes are. In fact, with proper precautions they can be placed on highly polished wood surfaces without damage. An advantage that appeals to many householders is the fact that in the vacation season a two-weeks water supply can be given and the plants left with the assurance that on coming home they will be found in the same thrifty condition as when left. The longer life of the metal box as opposed to a wooden one is another advantage. Some florists have not taken kindly to the introduction of this novelty, which was patented about two years ago, and indeed to the practical grower this form of sub-irrigation may not present the most ideal conditions; but over against this is to be considered the many dangers of greenhouse-bred plants in the hands of the average amateur, and undoubtedly if veranda or window gardening could be made a bit easier and more simple there would be both a better sale for pot plants and the engendering of a greater love of flowers—this latter a missionary or advertising advantage the progressive florist cannot afford to ignore.

HAVRE DE GRACE, MD.—Chas. Uffler, formerly gardener to Mrs. F. H. Garret, Baltimore, is now with C. E. Bryan, Mt. Pleasant, this place.

TRADE GOOD.

Trade since Easter keeps up to the usual standard, there being something in all lines which keeps using up the stock as it arrives. The rose stock is good and shows fine color, but while Bride and Bridesmaid are plentiful enough there is a decided shortage on American Beauty and Richmond. Carnations are all that could be desired, excellent blooms, good color and stems, and are bringing good prices. Violets are over for the season, but sweet peas and lily of the valley are plentiful.

NOTES.

As the result of the explosion of a 115 h. p. steam boiler, which occurred April 21, the extensive greenhouses of Miller Bros. of Bracondale, near the junction of St. Clair avenue and Dufferin street, are now lying in ruins. The most remarkable feature of the accident was that of the 23 employes who were working in the houses at the time not one was injured seriously enough to render him unable to work. The loss is estimated by Mr. Miller at in the neighborhood of $50,000, none of which is covered by insurance. The scene of the wreck is a picture of almost complete destruction. The solid brick boiler house, the walls of which were nearly two feet thick, is literally level with the ground, and the 88-foot brick chimney is scattered over an immense area. The biggest piece of the boiler which exploded is lying in the center of a field a quarter of a mile away. A smaller boiler, which weighed quite a ton and a half, is intact 200 yards away. The field adjacent to the greenhouses is covered with broken and twisted pieces of iron pipe and machinery, bricks and wood. Smaller scraps of wood and iron are reported to have fallen at various points within a mile of the scene of the wreck. The ends of all the houses next the boiler house are completely wrecked, and the unbroken panes of glass left in the houses are very few. Of the residences in the immediate neighborhood many of the windows are broken by the concussion.

Bride and Bridesmaid roses, very select stock, and extra fine lily of the valley are coming from The Dale Estate, Brampton. The firm has lately gone into gardenias and they are proving fairly successful.

J. H. Dunlop has his American Beauty roses in fine shape and in another week there will cut very select blooms in large numbers.

Grobba & Wandrey are strong on Baby Rambler roses and hydrangeas, which find a ready market.

The Bedford Park Floral Co. is cutting some fine Richmond and Killarney roses in limited quantities.

Local florists report a largely increased business at Easter, in both cut flowers and plants. Easter lilies, especially, sold remarkably well.

John McMurchie, late of Dobbie & Co., Rothesay, Scotland, has been reappointed city gardener and is at present busy preparing his estimates for work for the season. The park board intends planting a large number of trees on the boulevards this spring, principally Russian poplar and American elm. The trees and shrubs which have died in the different parks and boulevards will be replaced, and various other improvements in the city along these lines will be made. The exhibition grounds will also be prepared for tree planting, etc., as preliminary for the Dominion exhibition which will be held here in 1911. The provincial government will do some tree planting this year, principally on the streets surrounding the new parliament house site, as the ground in the vicinity of the new building is not available for planting on account of workshops, machinery, etc.

On March 23, in the city hall, Abraham Knechtel, inspector of Dominion forest reserves, gave a most instructive lecture, illustrated by magnificent stereopticon views, on the subject of forest reserves and tree planting in general. The lecture opened the eyes of many regarding the great waste of timber going on, by means of fires, lumbering operations, etc., and the remedies proposed by re-afforesting the burnt areas, etc., and taking greater precautions to prevent forest fires. Incidentally Mr. Knechtel gave the people of this city many valuable hints as regards tree planting on the streets and grounds surrounding houses, etc.

G. W.

IOWA FALLS, IA.—W. H. Hall has rented the Riverside Greenhouses and will take possession July 1, succeeding J. P. Murphy, who has bought a plant at Independence.

Why We Are Opening A Chicago Office

It is like this: It has always been difficult for us to give our numerous western inquiries the personal attention we wanted to, and believe there is a special advantage in being in closer touch with you all.

Chicago is the business center of the West and Far West, and naturally enough we have located there. Of course, we wanted to be right in the business center, so we selected an office in **"The Rookery Building,"** on the corner of La Salle and Adams Streets, You will find this office in charge of a member of our firm, Mr. George Sykes. He has been with us going on fifteen years, and thoroughly understands greenhouse building.

When you are in town look in upon him. If not convenient to do this, drop him a line.

E. H. HUNT

76-78 Wabash Ave., CHICAGO

Hagerstown, Md.

If growth and expansion are the barometer of business conditions then things are encouraging and the prospects never looked brighter. Both roses and carnations are coming in fine crops and are moving well. Outdoor planting has practically commenced and the demand for bedding stock, if it continues at this rate, may exhaust the supply, ample though it is, before the season draws to its close.

His honor ex-Mayor Holzapfel, is in line marching onward. His recent addition of three houses each 30x230 feet to his already extensive plant, as well as the general improvements about the place, such as the imposing brick smoke stack, the best that could be built for the purpose, the ample potting or working shed, etc., decidedly prove his roseate views as to the business outlook. Mr. Holzapfel grows for the wholesale market, shipping his product within a radius of 400 miles and as far south as Florida.

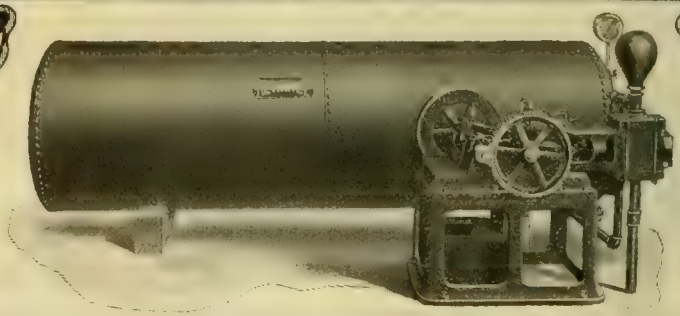
Wm. Bester does not say much about his pink seedling carnation, but those who saw it used and have watched its behavior during the past two seasons are very much inclined to the belief that it is a winner. It certainly looks it, every plant in a lot of about 3,000. Another season's test, however, will determine its fate. He has added two houses to his plant each 26x150 feet, while two more, each 30x130 feet, will soon be in course of erection. An 85-h.p. boiler, of a modern and most approved type, already installed, will furnish the heat required for the entire plant.

Henry A. Bester & Sons have built three houses each 30x150 feet, on South Potomac avenue, about two blocks from their present location and two more of the same dimensions are to go up as soon as the spring busy season is over. A 100 h. p. boiler, already on the ground, will do the work admirably. S.

WEST HARTFORD, CONN.—Roy R. Thomson, who has been in the employ of the National Fire Insurance Co. for the past three years, has taken up the flower business of his father, the late Paul Thomson. His fellow employes presented to Mr. Thomson a pair of solid gold cuff links suitably engraved.

DALLAS, TEX.—The Green Floral Co. completed its organization April 15 by electing the following board of directors: E. H. R. Green, E. M. Reardon, L. R. Bergeron, Harry Donnelly, Eugene Corley, Henry C. Coke and A. Miller. The purchase was authorized of the Haskell Avenue Floral Co. and the Kaufman road properties for a cash consideration of $125,000. This amount is also the capital stock of the Green Floral Co. The officers elected on the same date are: E. H. R. Green, president; L. R. Bergeron, vice-president; Eugene Corley, secretary and treasurer.

THE KEWANEE SYSTEM OF WATER SUPPLY



This is a Complete Private Water Works Plant

The above illustration shows a complete Kewanee System—Kewanee System No. 24. It gives service equal to that offered by the best city water supply system. Notice how compact it is. Notice its simple construction.

This water works plant includes the tank, pumping outfit, and necessary immediate connections. Extend pipe to the source of supply and to your fixtures and you will then be assured of every sanitary comfort and convenience—an abundance of water in the bathroom, kitchen, laundry, lawn, garden—anywhere.

This service, together with excellent fire protection, will be yours if you install

The Kewanee System of Water Supply

With the Kewanee System there is no elevated or attic tank to leak, freeze, overflow or collapse. A Kewanee Pneumatic Tank is located in the cellar or buried in the ground, and the water is delivered by air pressure. Any good form of pumping power which is adaptable to the local conditions, can be used with the Kewanee System.

Do you realize that there had been no improvement in the method of storing water from the time of Adam, until the Kewanee System of Water Supply was invented, about ten years ago? The only system was the gravity system, in which you put the water up in the air, where you didn't want it, in order to get it back where you did want it. This method will look positively foolish in a few years. It does look foolish now, wherever the Kewanee System is known.

Over 9000 Kewanee Systems are in use and every one is a success. Over 9000 water supply problems have been solved by the Kewanee System. Let us show you what we can do for you. No charge for expert engineering service. Our guarantee protects you. It is our rule never to have a customer dissatisfied.

Kewanee Pumping Outfits

Kewanee Pumping Outfits are furnished for any special pumping requirements. The same technical skill and practical knowledge required to develop and perfect complete Kewanee Systems, is devoted to the solution of individual pumping problems.

Write for our complete 64-page catalog, it is fully illustrated and tells where Kewanee Systems are in operation. Ask for catalog No. 53 and please mention this magazine.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the every day florist is called upon to perform

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see tha they get every issue, as otherwise they may miss some of this high grade work.

The Modern Sweet Pea.

Striking Development of the Most Popular Hardy Annual in the World and Its Wonderful Progress on Two Continents.

BY REV. W. T. HUTCHINS.

More or Less Historical.

An interval of about 10 years has passed since my name appeared in these columns as sweet pea correspondent, and now it is a great pleasure to get back again. Circumstances of a personal character interrupted my work with this flower, and I now find myself taking up the old line of work under changed surroundings. I am now living in California and besides having very favorable conditions of soil and climate for growing the sweet pea at its best I have easy access to extensive ranches where I see everything grown on a large scale, and where I go over the trials that include every new thing that can be obtained. Well known experts will assist me in every way to make the study complete.

Ten years ago I was trying to do this work under the less favorable conditions of soil and extreme summer variations of heat of the Massachusetts climate. Then the difficulties of bringing the sweet pea to any sort of perfection were very distressing. But now I have no such trouble. Success in California is a matter of course. We have no blight or red spider to fear. The vines imbibe health and make lusty growth and perfect color and bloom as once they did back east before the evil day came. I do not know what I may get by following the English rule of deep culture, now that the Spencer type lures us on to enthusiastic interest.

The past 10 years furnish us with a story of great activity in this flower. Just when we were feeling most depressed in America about the blight and the insect pests, over in Great Britain they were making up to this flower. And it was different from the popular wave that swept over our country. Ours was more of a craze. Our seed growers and seedsmen caught on to Henry Eckford's beautiful work and supplied everybody, and every garden had them. At a few points the interest focused into sweet pea shows, Boston, Worcester and Springfield, Mass., and the towns about Cohocton, N. Y., had very creditable shows. I have always felt that we discovered Henry Eckford before the people in Great Britain themselves did. Back in the early nineties S. P. Dicks told me they couldn't do anything with Mr. Eckford over there. But we had a lot to do with Mr. Eckford in this country and he took kindly to us. My visits to his place at Wem, Shropshire, were most cordially welcomed. But at the time of the sweet pea bicentennial held at the Crystal Palace in 1900 it was plain that the British seedsmen and flower men had discovered Mr. Eckford and now the competition there is something phenomenal. The story of the past 10 years belongs to their credit.

The Crystal Palace Bicentennial.

When I met the committee of the National Sweet Pea Society there, at the Crystal Palace bicentennial, I saw that they had begun to kindle an interest that would hold permanently and that would neglect nothing of the potential merit of this flower. Every week the Gardener, printed in London, publishes the notes of Walter P. Wright, who runs the bureau of sweet pea information. Discussions with regard to nomenclature and the finest points of distinction in novelties is very lively. The interest now turns on the new type which first appeared in Countess of Spencer, and which has now been put into about all the colors. To show how keen this interest, 100 new trial stocks have been imported to be grown this year.

I wish we could know the present status of the interest taken by the sweet pea people in Great Britain. They have surrendered to this flower. Mr. Eckford's faith in it has multiplied and now a host of specialists are at work, unfortunately adding on names without limit, but really making many new and beautiful thnigs. It is astonishing how the old Grandiflora form has suddenly leaped into the large wavy Spencer type, and bewildering

results in the Spencer form of almost every color are now obtained. Last summer we saw flowers that measured two inches across. And nearly all the seedling stock had bounded right into this type. This is where we are now. But Great Britain has the men who are putting in individual work of the highest grade. They are holding each ours and while time lasts there will be repeated revivals of enthusiasm in one part of the world and another in giving size and form to these colors. I hope to hear from various parts of our own country to see whether the time has come for emulating the present example of Great Britain. A local grower tells me there is no falling off in

THE MODERN SWEET PEA.—(About Half Natural Size.)

Countess Cadogan. Clear Violet, Wings Light Blue.

Mrs. Dugdale. Rose, Shaded Primrose.

other up by drastic criticism. The national society is doing all it can to enforce the necessary rules of judging.

Among the seedsmen, H. W. Mackereth of Ulverston styles himself "The Sweet Pea Clearing House" and he publishes a very ambitious looking list of the introducers of the latest new sorts. I have not tried to compile a complete list of everything, but including the varieties that were familiar to us 10 years ago I should say we now have at least 400 names, supposed to represent varieties of sweet peas. And when brought to a high standard of judging there are not many duplicates among them. Of course, color is duplicated. Mr. Eckford repeatedly brought out the same color in successive stages of development. But what an ever memorable work he did in drawing out new colors! I remember, in the first letter he wrote to me, he told me how many years it took him to get Orange Prince, but what a crowning success it was that he could carry that color, before he died, to the one to which he gave his own name! It is a wonderful approximation to orange and his success in getting a scarlet variety.

Effect of Climate on Color.

As I saw it at Wem in 1900 it seemed to my eye a true scarlet, although I cannot make our American stock of Queen Alexandra seem so. I think our climate changes it some. But do what we may to advance on Mr. Eckford's work in the matter of size and form, to him belongs the honor of the original elementary colors. It was a great contribution to human happiness to accomplish what he did in 30 years' work on the sweet pea. The colors he gave us are now permanently

the sale of sweet pea seed. Of course, it must remain a popular flower. But we ought at least to be a close second in the enthusiasm for the Spencer type. This means a very high grade work. But the United States is no slouch of a nation and we ought soon to hear that we have begun again to grow this flower at its highest exhibition quality.

Of course, we must expect that this Spencer type will cost nature some of its seed-producing power. In looking over fields of Countess of Spencer last summer the whole block was downright true to color and form, but only a few plants showed very much seed. We were glad to find a prophecy of hope in a few plants. If the Spencers generally behave in this way we must make a small quantity of seed do larger duty, and pay the seedsman a fair price. The man who is ambitious to do special work on this flower will give his plants plenty of room. When I went to the Crystal Palace bicentennial in 1900 I felt proud of what we had done in America. But the report of exhibitions in England makes us hold our breath now. In the 1908 Sweet Pea Annual of the national society is a letter of a prominent American seedsman who says he was astounded at the exhibition held at Vincent square. He tried to be loyal to America, but he said: "The world has certainly never seen an exhibition at all approaching this of any other single flower grown from seed." I felt the same way about the Crystal Palace show in 1900, but we were at work on the less developed sorts then. A sample of their interest in shows over there is seen in the last report of the Shropshire Horticultural Society. Their receipts for the year were practically £5,550. Where is the American society that can show an annual receipt of $27,000?

Recent Novelties.

I do not wish, in this article, to go into detail about the recent work in novelties, but the Gardener sent out a request to 50 sweet pea experts for their opinion of what was the best sweet pea in commerce, and while many qualifying remarks accompanied the answers, Mrs. Hardcastle Sykes received 15 votes, Countess of Spencer 10, Evelyn Hemus seven, Constance Oliver six, Mrs. Henry Bell three, Elsie Herbert, Dorothy Eckford and Etta Dyke each two votes. Silas Cole, the introducer of Mrs. Hardcastle Sykes, describes it as a "delightful pure pink mottled on white." Mr. Mackereth says it is a "glorious flower of Countess of Spencer form, and a blush pink

THE MODERN SWEET PEA (ABOUT ONE-HALF NATURAL SIZE).

shading paler towards the center." It received an award of merit from the national society in 1905. Countess of Spencer is also claimed by Mr. Cole as his introduction, first appearing about eight years ago. Evelyn Hemus, introduced by Miss Hemus, is a "warm cream shading to yellow with a picotee edge of terra cotta pink." Constance Oliver is an introduction of Wm. Lumley—a "delicate creamy yellow suffused and crayoned with deep pink, some blooms with deep rose-carmine, very waved, perfect and distinct." Mrs. Henry Bell is "straw colored with decided rose edge." Elsie Herbert is a "giant Spencer, white with picotee edge of light rose." Dorothy Eckford we thought was a production to be proud of in the line of white, but the best stock of White Spencer now rivals it, and Etta Dyke is a white Spencer.

FLORAL ART AT THE BERLIN EXPOSITION.

THE RETAIL TRADE

Floral Art at the Berlin Exhibition.

The display of floral designs in connection with the international horticultural exhibition, held in Berlin April 2-13, was one of more than ordinary interest. Judged from a purely artistic standpoint, the arrangements set up by M. Lauchaume, Paris, stood far in front of everything else. The Parisians appear to be peculiarly gifted in the art of producing pleasing effects by means of flowers and foliage, whether it be for the ornamentation of tables, halls or rooms, or for personal adornment with sprays, bouquets, or garlands. In his color effects, M. Lauchaume was often daring, but never at fault. Nothing could be richer or more elegant than a tall, loose stand fully seven feet high, built up with big leaves of red and yellow croton, orange-colored clivias, salmon-red cattleyas, large spikes of cymbidium, and long, well-flowered pseudo-bulbs of Dendrobium Wardianum, the whole held together with fronds of Adiantum Farleyense and Asparagus plumosus. Another elegant floral trophy was composed of yellow arums, Iris Susiana, pink roses, long spikes of odontoglossum and phalænopsis, with sprays of light green Japanese acers and fern fronds. It is difficult to adequately describe these arrangements, they need to be seen to be properly appreciated.

The Germans appear to employ flowers and foliage rather as emblems or symbols of plant lore than for their mere decorative effect. They express by means of certain flowers or leaves some emotion, as Ophelia did when she gave rue and rosemary: "There's rosemary, that's for remembrance; pray you, love, remember." To some extent we make a like use of flowers, the wreath of orange blossom at weddings, the mistleto at Christmas feasts, and the primroses on Good Friday being of this character. Flower lore is, however, rapidly disappearing with us, and in most of our uses of flowers and foliage we are merely decorative, sentiment being unconsidered by either florist or employer. In Germany many of the floral designs have a sentimental meaning. Perhaps the prettiest is the spray of myrtle worn on the head of the bride. According to mythology the plant received its name from Myrsine, a favorite of Minerva; and when she was changed into this shrub it was consecrated to Venus. Among the Berlin exhibits there were many dainty arrangements of myrtle leaves and flowers. The catkin-laden branches of the goat willow are largely employed in wreath making. The significance of willow is for slighted or forsaken lovers. "In love the sad forsaken wight the willow garland weareth." It is probable that the use of pine branchlets for garlands, crowns, wreath, etc., has been copied from the Greeks, who wore them in their Olympian games. The use of poppy heads, which occurred frequently in wreaths and big crosses, is difficult to understand, unless they signify eternal sleep. Juniper, ivy, bay, Douglas fir, Erica carnea, Daphne Mezereum, grey lichen, cypress, lilac, and alder all entered largely into the composition of wreaths, crosses, columns and shields. Lily of the valley, violets, roses and forget-me-nots were much used in the general floral designs. There were excellent effects with orchids, lilies, arums, azaleas, primulas, lilac, and other favorite florists' flowers, but generally German art in this direction was not really first-class.

A design in which variegated kale leaves were used in combination with cattleya flowers was somewhat grotesque. Both Viburnum Opulus (snowball) and hydrangea were largely used for wreaths and crosses as well as in table decorations, but invariably the flowers were only half-developed and of a soft green color, a condition in which they appear to be preferred. Primula obconica was much in evidence. Stocks also were used for wreaths. Perhaps the plant most generally employed in all the compositions whether of foliage or flowers was Selaginella Watsoni; the variegation appears to please the German taste. This plant was also used to form the groundwork in the groups of plants arranged in the big exhibition halls. The principal German exhibitors of floral designs were Strahl & Falcke, Max Brust, Heinrich Kruger and J. C. Schmidt, all of Berlin.—Gardeners' Chronicle.

A Floral Pillow.

SEE SUPPLEMENT WITH THIS ISSUE.

Possibly in no other design, not even excepting the wreath, does the originality and taste of the designer or the lack of it show to so great an extent as in the floral pillow. The pillow of some designers may just as well be labeled a Rugby football or a sand bag, for there is absolutely no likeness to anything in Heaven or on earth; it is just a conglomerate mass of flowers without any form worth mentioning. Yet the pillow can be made a very attractive, even artistic, design, though of necessity it must be to some extent conventional in form. Beginners in the art of making up floral pieces should remember that the wire or other designs sent out by the supply men are not meant to be strictly followed in outline, but are intended as supports

FLORAL ART AT THE BERLIN EXPOSITION.

on which the designer carries out his ideas as to how such a piece should look. The lines of the design should appear only by suggestion, not as though they were drawn by compass or rule. Once this idea is grasped by the young practitioner, the rest is easy, for most flowers have a natural pose and grace that they fall into easily if allowed to instead of being twisted into unnatural and meaningless contortions.

While we are not in favor of a lot of lettering on floral designs, the simple word "Rest" on a pillow is suggestive and especially suitable when the funeral is of an aged person. Nor do we care for the lay figure idea in connection with flowers, but a favorite doll, laid on one side of a pillow that was intended for the funeral of a little girl gave a human and sympathetic touch to that individual case that affected more than one of the mourners. As in so many set designs, the lily of the valley stands head and shoulders above every other flower. Used with a little of its own beautiful foliage, lines or forms can be suggested without being severe, the natural grace of the bells and their pretty pose on the slender stalks preventing any possibility of stiffness. The flowers are fine in combination with white or pink roses or orchids and should in all cases be used to lighten the effect caused by the close placing of other flowers. With regard to the flowers for the body of the design, there is a great variety that can be used, almost anything in season being suitable if carefully and artistically arranged.

Retail Business in Chicago.

There is no getting around the fact that business for the past two or three weeks since Easter, has been to some extent "stale, flat and unprofitable." Nearly everyone says so and Chicago retailers do not look on the worst side of things generally. There are exceptions and some say their sales show a decided advance over those of the corresponding time last year, but the other way round is the rule. Most of the retailers are taking what consolation they can out of the fact that they expected some kind of slump after the excellent Easter trade and when asked about the cause of it the general opinion seems to be that people have so many flowers at Easter that they feel like giving them a rest for a time.

But it cannot be said that they are not out for the trade if it comes along. In every case the stores are replete with fine stock, shown in the most attractive form. Naturally the very inclement weather has been against trade of a transient character and with many well known society people out of town the trouble is made worse. At the Ernst Wienhoeber Co.'s fine store on Elm street many very attractive novelties are shown. Some of these are expensive and choice, such as the cement and alabaster vases, jardinieres, etc., but there are quite a number of natty little trifles, inexpensive and showing a good profit, yet different. For instance, we noted some little baskets filled with about half a dozen bright yellow marigolds. It seems very simple, and it is, but there is just that touch of distinctiveness and originality that makes them noticed. A customer who is tired of seeing narcissus, Killarney roses and lilies will fall to a neat little thing like this and pay a good price for it, and there are many such in this fine store.

The "butterfly" sweet peas, as the Spencer varieties have come to be called, form another attraction, their pretty, wavy petals making them quite distinct. Double white lilac, plants of the dwarf Japanese maples, some tall vases of the wild mignonette and many other seeming trifles lift the stock out of the commonplace, while the quantity and variety of the different wares is surprising. Among the novelties in this line is the ware made by the Wheatly pottery of Cincinnati, O., made in a great variety of shapes, the colors running principally to reds, greens and yellows, these running into each other in innumerable gradations. Italian and other chinaware and art pottery of all descriptions are shown in the elegant and unique showrooms over the store, making it a most interesting one to visit.

Fleischman Floral Co. reports an excellent month's business, especially in funeral and design work. At one south side funeral there was a large wagon load of designs sent from the city store and there has been a great run of bouquet work for both local and out-of-town weddings. Very choice hydrangeas from Peterson of Cincinnati are shown, as well as choice cut stock in all lines. Orchids are being sold in increasing numbers here and George Wienhoeber says he had to turn down rush orders for white orchid bouquets as the stock for them could not be obtained locally. Very fine Lilium lancifolium are being shown at the company's north side store. A. Lange, Harry Rowe and the Bohannon Floral Co. are all showing fine stock and are out for whatever business is coming along.

John Mangel says business is fair, with dull as well as good days. But he is evidently looking forward to busy times. As we announced some time ago, he is going to entirely remodel his store and has already put in a very fine ice box. The wood is green finished oak and it has a plate glass front with mirror back. The floor is tiled green to match the woodwork and this will show up the stock to perfection. Mirrors are also to be used around the walls and a fine marble table with solid brass frame has already been installed. The usual fine stock is on display here and we noted some particularly fine Mrs. Jardine roses. In color, size and stem this rose is undoubtedly a leader and the only fault apparent is a slight flatness which seems characteristic of the open flowers of this otherwise fine rose.

WREATH BY HENRY MORRIS, SYRACUSE, N. Y.
Pink Roses, Lily of the Valley and Galax.

Wreath of Roses and Galax.

The accompanying illustration shows a 3-foot wreath of galax, pink roses and lily of the valley. This was made to the order of the council of chiefs of the Mystic Krewe, of Ka Knoo No, the Syracuse, N. Y., carnival association, by Henry Morris. It was for the funeral of Alexander J. Brown, father-in-law of Joseph A. Griffin, the head of this association.

NEW YORK.—Business has evidently been good with William Burns, a Sixth avenue florist, who has just purchased a six-story apartment house at Riverside drive and One Hundred and Forty-third street for investment. Mr. Burns also owns the Glenham at Broadway and One Hundredth street.

THE CARNATION.

Breeding Carnations for Scent.

Carnations undoubtedly owe their popularity through the ages to the present time, more to their enchanting perfume than any other of their commanding qualities, says Montague C. Allwood in the Horticultural Advertiser (English), and no matter how much we as commercial men may scramble for size of flower, length of stem, and strength of calyx, the public, which after all is the final judge, demands perfume. If this be so, and carnations have won their high position in the public favor mainly through their famous clove scent, surely, if they are to maintain that seat of grace, there must not be a falling off in this essential quality. So that it behooves us all as nurserymen and especially carnation specialists and breeders, to see to it that, at least in our time, this divine flower does not lose its greatest charm, and sink back to be classified with those of a lower grade.

That it is most difficult to obtain a sterling novelty, good in all respects, coupled with a rich perfume, is admitted, and such should be especially valuable when secured. The point which I think there is much in and one which I expressly wish to emphasize is this, that British-raised novelties of perpetual flowering carnations are more prone to rich scent than those from across the Atlantic. I fancy I can hear some one say, "What about ritannia?" Admitted it has no scent; but seedlings from Britannia invariably have; in fact, out of many hundreds of seedlings we have from Britannia, no matter what their other weaknesses may be, scent is not one of them. Mrs. Burnett has a particularly strong scent, also the majority of its seedlings. Our new crimson variety, Black Chief, in spite of the fact that The President and Harlowarden, two scentless varieties, are its parents, has one of the richest clove scents. Lady Dainty, another of our novelties, has, perhaps, the strongest scent of all; so all facts point to an encouraging future for British-raised varieties, particularly so when compared with our contemporaries over the Atlantic. We will hope that it is the cool fresh British air which has the power to give back to the perpetual carnation this most desirable, and indeed essential, quality. There may be a little in this, and it may even be that Bush Hill Park air may have an extra portion of this persuasive influence.

Carnation Shasta.

The accompanying illustration shows the new variety, Shasta, to be disseminated next season jointly by Baur & Smith, Indianapolis, Ind., and Patten & Co., Tewksbury, Mass. The growers claim it is a pure glistening white always though it resulted from a cross between a pink seedling and Enchantress. The flower is round, moderately fringed and finely built, in size from three to 3½ inches. The calyx never splits, the stem is of good length, wiry and strong enough to support the flower erect. It comes in early and is not a cropper. It will probably make its mark as a fine commercial sort as in addition to its other good qualities, it is strong in growth, yet makes no superfluous grass. Baur & Smith have already worked up a large stock of it in anticipation of a big demand.

Carnation Cuttings Rooting Slowly.

ED. AMERICAN FLORIST:—

I find my carnation cuttings very slow forming roots. They were placed in the sand about six weeks ago in a carnation house temperature; curtains were placed from the pipes to the benches to maintain a stronger bottom heat. The cuttings look as fresh as when inserted in the sand. Is this slow rooting process detrimental to the future welfare of the plant? E. W.

Probably a little more heat at the roots would have been advisable though as the cuttings look fresh and green they are probably all right. The slow rate of rooting, if they root strongly eventually, is no detriment to the future plant.

THE ROSE.

Cut Roses for Commercial Purposes.

A paper read by Wm. G. Badgley before the Morris County Gardeners' and Florists' Club at Madison, N. J., April 14.

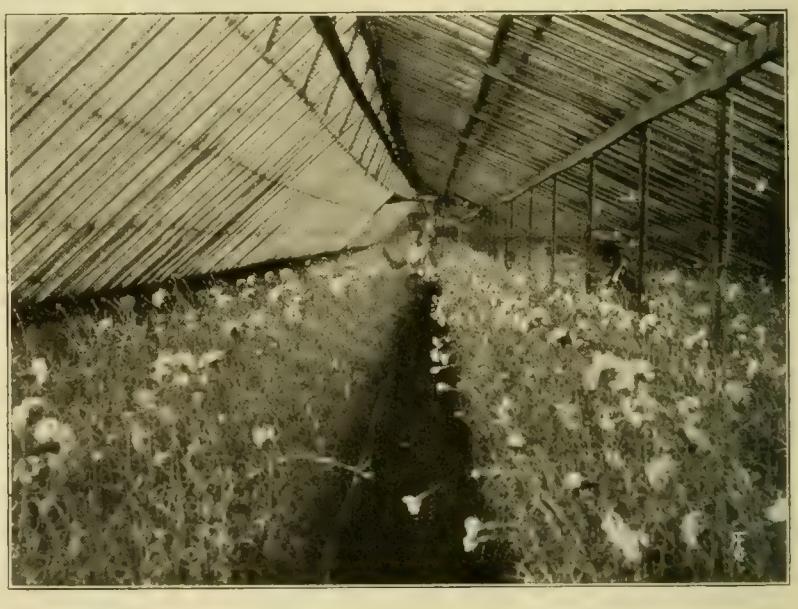
There are a few well defined principles and rules regulating planting, cutting, tying ventilating, etc., and as these rules have been thoroughly threshed out before you time and again, and furthermore, as these rules have been practically accepted and adopted by all, we will not at this time go over them. The first thing to consider by those who have not as yet started in the rose-growing business, or those who contemplate expanding, is where to locate and what style of house to build. As to location, this question should be well thought out before starting. Here are a few points to consider in this matter: A location near a railroad station should be secured, not too far from the point where the goods are to be disposed of, as selling cut flowers through a commission house or otherwise should be watched as closely as the fires in the boilers. Being located close to a shipping point will also save considerable in the way of teaming, carting supplies, shipping goods, car fares, etc., which expense would be perpetual. Select a location on property that is not too expensive for the more paid for the property the greater will be the investment and the place would have to pay that much more on the capital invested, to show the same percentage of gain as it would do on less expensive property.

THE LAY OF THE GROUND.

In securing property to erect greenhouses on consider how the ground lays, what kind of a bottom is there for the houses, and whether the cellar will be dry, what kind of soil you are getting to grow your plants in, if you are getting room enough for them to expand on, and if the property you are getting is in a place likely to increase in value. Property that is as near level as possible, with some place to run cellar and other drains into is best. Do not build where drainage cannot be arranged unless it is on gravel, as water in the cellar and standing around the place is very detrimental and discouraging. Secure, if possible, quality of soil for growing purposes of course considered, a sandy or gravelly bottom, as this kind of soil absorbs surplus water from watering and rains quickly, leaving the bottom of the houses practically dry. This will be a big advantage in combatting black spot and mildew. I would advise by all means when purchasing property for this purpose to get enough, for the probabilities are it can never be bought so cheaply again. It will be needed for expansion, and there should be enough from which to secure all soil for growing purposes.

SOIL.

Soil for the greenhouse should be prepared in the field, as nearly as possible to the conditions wanted when put on the benches. The reasons for this are that cow manure in this vicinity is getting scarce and expensive and I must say that handling this article in the form of mulching or otherwise is the nastiest and most disagreeable occupation one could be put at, aside



HOUSE OF CARNATIONS AT GEO. A. KUHL'S, PEKIN, ILL.

from the fact that it is very detrimental to the growth of the plants, if applied in bulk, as I have seen some use it, especially in the short days when it is hard under the most favorable conditions to dry out the benches. In preparing soil in the field one can, by plowing in one or two green crops, cultivating, applying lime, bone and stable manure in sufficient quantities, obtain a soil that will, by giving a light top dressing of one-half well rotted cow manure and one-half good soil, once in the spring and once in the fall, or oftener if considered best, produce better results and with less expense than by using cow manure in the manner spoken of above. I would recommend top-dressing with a good sheep manure, because this article contains nearer equal proportions of phosphoric acid, potash and nitrogen in the form of ammonia than any other manure I know of. I would use it at the rate of 200 pounds to a house 20x150 feet about once in six weeks, a little oftener in the longer days when the plants are growing more rapidly. It should be watered in; a watering with a good, strong, fresh cow manure liquid once a month is a very good way of feeding also. In light soils, where watering is done frequently, feeding can also be done to profit more frequently.

SIZE OF HOUSES

As to size of house, I have had no practical experience in building, operating or maintaining the larger or modern house, so cannot advise in this matter, but will say a few words on what I have gathered on this subject: A house from 40 to 60 feet in width, built of what is known as iron construction with concrete sides and cast iron posts set in concrete, is about what is considered perfection at the present time. A house of this kind can be built for less money per square foot of ground space covered than wooden houses of the old style, 18 or 20 feet wide. They are easier and less expensive to operate and will produce better goods under identical conditions. In the matter of repairs they are also less expensive. Less ground will be covered, as there is less space to be wasted between them. As to length of house, I would say that it makes no difference how long a house is built, if partitioned at say 150 to 200 feet intervals, providing the heating and management can be economically arranged.

To give an idea of the extremes to which some of our growers have gone, I will mention a house I have in mind which is 156 feet wide and 725 feet long. This house, according to its owners, is giving perfect satisfaction, and they have under construction at the present time a house 174 feet wide and 725 feet long. This house should be watched with interest by all. I know of another house 1,340 feet long and 60 feet wide, which I know has produced as fine Killarney roses as were ever grown, and its owner says that he would build it longer had he the ground to build on. While at the rose show in Buffalo I visited a place where there were a number of what is known as pipe construction houses, that is to say, the posts, plates, purlins, ridges, rafters, columns, trusses and joists were all made of pipes and pipe-fittings. I understand that this style of house can be put up at considerably less cost than those known as the regular construction iron houses. This style of house appealed to me as a very good one and it would pay anyone to look into the matter before building. It is put on the market by the King Construction Co.

VARIETIES

There is no doubt that the standard varieties for commercial purposes are the best, all things considered, and it is safe for the conditions of the New York market, generally speaking, to grow one-quarter white and three-quarters pink, or if you can grow a good red profitably, grow as many as you reasonably can. It is not, as a rule, the plants that produce show flowers that are always the best money-makers, but the money-makers if properly handled can be made to produce show flowers. American Beauty, of course, is a standard in its class, and no doubt will be for some time to come. This rose does not pay the small grower to handle, as it has been taken up as a specialty by nearly all the large growers, and where grown in large quantities it can be grown to better advantage, and produced more cheaply than in smaller quantities. The flowers can be handled to much better advantage when they are received in large quantities from one source; therefore one cannot realize as good an average on Beauties where his supply is small and irregular.

There has been numerous new varieties put on the market in the last few years, namely, Rhea Reid, Mrs. Potter Palmer, Mrs. Jardine, Wyndmoor, My Maryland, Queen Beatrice, Purity, White Killarney and others, and, I am sorry to say, that excepting pink and white Killarney and My Maryland, the most of them are no real improvement on what we already have, excepting, of course, that they have their value as novelties. Under favorable conditions all of these have given good results, as their breeding is good; however, there is as yet no general demand for them.

The Killarneys are worth spending a little time on, as both have proven favorites as commercial and show flowers and these roses, to my mind, are justly entitled to all the praise they have received. They are as good show flowers as were ever set up, if grown for that purpose, and the best money-makers that ever were grown. White Killarney bears the same relation to the pink variety as Bride and Bridesmaid do to Mermet, and therefore, being of the same blood and habit, each will do equally well grown under the same conditions.

CARNATION SHASTA.

Flowers Grown by Baur & Smith, Indianapolis, Ind.

CULTURE OF KILLARNEY

When taking wood from Killarney plants for cuttings, considerable care should be exercised in the kind of wood taken, as it is characteristic of this plant to drop its foliage before it attains much age, and as they will drop them as quickly or more so in the sand than they will on the plant, one should strive to make cuttings of wood that is not too old, nor yet of too soft a texture. Should the cuttings lose their leaves in the sand and look like a failure, just let them alone and attend to your watering and temperature, and, if necessary, let them stay right there for two months or more and you will find that your efforts have not been in vain. This rule, of course, applies to cases where nothing unusual or detrimental has happened, and the cuttings have simply dropped their leaves.

Planting, watering, ventilating, etc., with this rose is carried out in about the same manner and following the same rules as are customary through the summer and fall months with

other varieties, excepting cutting. This should not be done, but keep all the buds pinched back every time to the first spray of foliage from the top containing five leaflets. From such an eye, covered by such a leaf, growths will produce strong stems. Continue pinching until October 20, when it will be wise to take off about one half of the buds, and on November 1 take off the other half. Then stop pinching, and this will bring the crop in for the holidays. Owing to the fact that August, September and October in the last few years have proved to be very poor months for cut roses in the New York markets, asters, dahlias, etc., having full swing at this time, it pays much better to get roses in through May, June and July, and as Killarney is a rapid grower and the pinching process has a tendency to run it up and develop it into a plant which is plenty large enough by October 20 if planted July 5, providing, of course, that stock is in good condition when planted, the results will be better than if planted earlier.

The buds which come from a second or third growth of Killarney are far better than those taken from the first or single growth. Killarney is a free grower and is always busy, therefore it requires lots of food but not rank chemicals. It should be given small quantities and often, using a fertilizer which runs high in available nitrogen, or ammonia, in small quantities just after they have started a new growth, say when this growth is from three to six inches long, as this kind of food will have a tendency to cause the stems to run longer. Then, just before the buds start to develop, apply in small quantities potash in the form contained in Canadian unleached wood ashes. This kind of food will have a tendency to make the buds heavy and give them color. I would not advise too strongly what fertilizers to use in every case, or in what quantities, as this matter depends largely on the condition of the plants, the soil they are planted in and who is growing them. But do not use too much rank fertilizer at any time, as it is apt to cause a bad case of indigestion. Apply what can be used up promptly by the plants, be it in the form of cow manure or otherwise, as too much bulk on the benches will prevent them drying out readily, and the faster the benches dry out the more rapidly will the plants grow, and the oftener you can water, the oftener you can feed, which means growth and therefore profit.

MY MARYLAND AND RICHMOND

My Maryland has many good features. Its color and fragrance are very pleasing, the size, shape and substance of the bud are all that can be wished for, stem and foliage are good, too, but there seems to be some uncertainty as to its commercial value yet. The features of this rose which do not please, as I observe them, are that there is a little too much hybrid blood in it, that it has a sleepy tendency in the winter months, and that it is not an abundant cropper. I think, however, that when the growers become more familiar with its nature, cultural methods will improve it, and if the flower-buying public like it, it will find a place in the front ranks. For red, Richmond seems to be about the best in sight at the present time. This rose seems to have favorite localities. Boston, Philadelphia and Chicago turn out Richmonds that are marvels, and it is painful to conceive that in this vicinity we cannot do as well. Richmond is practically of no value in hot weather, as it will not keep. In the short days when it is selling for good money, it is sluggish and slow, and one cannot cut much from it just when he wants to. Then comes the spring with its growing weather, and they come along and do nicely, but by this time Ulrich Brunner and other red stock is in the market and they do not do much in the way of returns. So in this locality it does not pay as well as other varieties. What we hope to see in the near future is a rose with the stem and foliage of Richmond, head of Bridesmaid, and as free a grower as Killarney. This is worth trying for, and I hope some of our specialists will give it to us. Always remember in growing roses to strive for the three following essential qualities: A rose to please the consumer, one which the wholesaler as well as retailer can sell at a fair price and one that will produce enough flowers to make it profitable for the grower.

THE BERLIN INTERNATIONAL EXHIBITION.—(After the Gardeners' Chronicle.)

See Report in Issue of April 24, Page 641.

WHITE KILLARNEY is evidently a good keeper in addition to its other good points. When returning from his American trip, Harry A. Barnard, Hugh Low & Co.'s representative, took with him a box of this variety and the flowers were in such excellent condition on arrival that he exhibited them at the usual fortnightly meeting of the Royal Horticultural Society in London, April 20. "It found a host of admirers," he says, and "it is a rose that has come to stay."

Darwin Tulips at Hillegom, Holland.

The illustration herewith shows the exhibit at the Hillegom, Holland, flower show, of Darwin tulips by von Meerbeek & Co., of that city. These were shown in full flower April 8 and the fine palms flanking the group and the dwarfer ones arranged among the tulips give a fine, finished effect to the group that is characteristic of European shows, but too little seen in those in America. These Darwin, or mother, tulips are among the brightest and best in existence and always command admiration when shown in good order. Many are self colored and their range is a very wide one.

Narcissi in England.

Of the large trumpet varieties Empress is very fine, but here it is shorter in the stem than Horsefieldi, which latter is very hard to beat. Golden Spur and Henry Irving still hold on and Princeps is one of our best market varieties. Emperor is far and ahead the best strong yellow. The medium cupped Sir Watkin has been a prolific bloomer, very distinct.—S.

THE BERLIN INTERNATIONAL EXPOSITION.—(After the Gardeners' Chronicle.)

See Report in Issue of April 24, Page 641.

SUGGESTIONS FOR PLANT GROWERS.

Caladiums.

The earliest caladiums seen in the stores are usually poor in color with few and small leaves, the result of wintering the bulbs too dry and starting up in heat at once instead of allowing them to make a little root first or at least to plump up the bulbs. It may be an advantage to do this where an early market has to be caught, but there is not usually so good a demand for caladiums very early in the season as there is later when the cut flower supply runs short. The plants should be grown right along in a gentle heat and in as much sun as the foliage will stand; then when they are exposed in a retailer's window or in the home of the customer they will not wilt up in a day but last a reasonable time.

Crotons.

Keep the young stock well apart now and in a good light to bring out the color in the foliage. Where old plants were cut back into shape some time ago and are now starting into growth they may be repotted, removing some of the old compost from the roots and repotting into the same or even a smaller size to be again shifted later on. Even if these plants are not wanted for sale or decoration it pays to look after them well just for stock purposes. The leaves will be better and the cuttings will make better stock than from neglected stock plants. Where seedling raising is carried on grow these plants in a good light and keep them a little pinched for pot room to induce flowering and when in flower keep the atmosphere around them fairly dry.

Cyclamens.

The August-sown cyclamens are now fine stock with four and five good leaves and others forming. It is not advisable to repot these too soon, but the stock should be looked over, given a new stand and the forwardest plants arranged by themselves to be repotted before the later ones. This irregularity in the plants can always be noticed in cyclamens from the earliest seedling stages on, and it is much better to recognize it and keep them separate than to try and even them up by cultural methods otherwise. The watering can be much more easily carried out when the plants are all alike in the separate batches, for no matter how careful a grower may be in his watering mistakes are likely to occur when weak, strong and medium plants are all mixed together. In a very short time now the strongest of the autumn-sown stock will be ready for a shift, this time into 4-inch pots. The compost should be sound, fibry loam with one-eighth of old, well-dried cow manure and leaf mould and sufficient coarse sand to keep it open. Many growers have fancy preparations of soil for their different plants, with all kinds of nostrums; but for growing good plants good, sound loam is still the main standby. It causes a good rooting system, and when this much has been obtained feeding and watering are easy. An ideal house for cyclamen growing is a narrow, span roofed structure with center walk and side benches close up to the eaves. Here there is abundance of light at all times, and shading can be arranged as needed. The believer in large houses, who has gravitated into plant growing from the large cut flower growing places, complains that small houses are more liable to fluctuations of temperature and more trouble to ventilate than large ones. But plant growers have to be about the houses frequently and, with shading on in summer, it is easy to so regulate the ventilating that, in connection with frequent damping of floors and stages, the correct atmosphere can be easily maintained. From now on a regular light shade will be needed for cyclamens, and after a week or so of nursing until they get over the slight check from repotting plenty of air night and day when the weather is suitable. Late seedlings are now ready for potting from the seed pans or flats and may take the place on the shelves lately occupied by the earlier plants.

Pelargoniums.

To get the best possible results out of the somewhat small pots in which pelargoniums are grown considerable feeding is necessary and, no matter how good the soil was in the pots, the roots will, by the time they have run well through it, have exhausted a good part of the nutriment it contained. The heads of the plants will be getting large and the flower buds forming, these constituting a great drain upon the roots. A good guano is one of the finest manures to use at first and this should be changed to blood manure or soot water before it loses its effect. The color of the foliage is an indication to the experienced grower as to how the plants are for food. As long as they are deep green the feeding has not been excessive, but should the center of the growth appear yellowing (not the outside or edge of the leaves) this is a danger signal that must not be disregarded. In any case a week without feeding, using clear water only, helps the roots and keeps them active. A good layer of tobacco stems should be placed around the pots on the benches as this helps to keep green fly in check. But it will probably be not sufficient without occasional fumigation, and this must be attended to. The insects are particularly persistent in these plants, and stronger fumigating than for most other plants is necessary, provided, of course, there are no other and more susceptible plants in the same house.

To Be Done Now.

IN THE GREENHOUSES.

Watch carefully for the work of slugs in the adiantum benches and trap them in bran or cabbage leaves.

Propagate plenty of Begonia incarnata and other winter flowering species.

Keep the chrysanthemums for exhibition moving and never allow them to get stunted from insect atttacks or by getting hard in the pots.

Shift on gloxinias that were started in small pots to the flowering size. Keep them in a good light to prevent drawing.

Mark the finest flowers of herbaceous calceolarias for seed and keep them in a moderately dry atmosphere.

See that the hydrangeas have plenty of room and do not neglect either watering or feeding.

Thin the shoots on the tuberous begonias to about three or four to a plant, as they will be stronger this way than if crowded.

Prick off the small patches of fern seedlings as soon as the initial fronds appear.

OUTDOORS.

Sow plenty of mignonette, candytuft, cornflowers and marigolds for cutting.

Prepare the plant protectors and plunging material for use when it is safe to place tender stock outside.

Finish planting gladioli as soon as possible, but do not attempt the work if the soil is in a wet or pasty condition.

Thin and clean the rows of all seedling vegetables by hand early or the weeds will soon beat the plants in growth and crowd them out. Use the hoe frequently between the rows in mild weather but not if a frosty night appears likely.

DARWIN TULIPS AT THE HILLEGOM FLOWER SHOW, APRIL 8.

Exhibited by Van Meerbeek & Co., Hillegom, Holland.

THE AMERICAN FLORIST

1885 TWENTY-FOURTH YEAR. 1909

Subscription, United States and Mexico, $1.00 a year; Canada $2.00; Europe and Countries in Postal Union, $2.50. Subscriptions accepted only from those in the trade.

Accuse not nature,—she hath done her part;
Do thou but thine. —John Milton.

W. ATLEE BURPEE & CO., Philadelphia, Pa., supplied the excellent sweet pea photographs reproduced in this issue.

The Late John Scott.

The widow of John Scott, whose sudden death was noted in our issue of April 24, desires to express to his many friends who so tenderly and lavishly demonstrated their love for him by their presence and beautiful floral mementos, her sincere appreciation of their kindness and sympathy. In her great affliction, the memory of this universal token to his life and character will remain a constant consolation.

SNOW to a depth of two feet was a Wisconsin record May 1.

W. T. MACOUN, of the Botanic Garden, Ottawa, Ont., has issued an excellent list of herbaceous perennials tested at that establishment with very useful notes on the flowering season, hardiness, etc., in that locality.

ORCHID SHOW.—Referring to the Boston orchid show, noted in our last issue, page 643, to be held under the auspices of the Massachusetts Horticultural Society next year, Secretary Rich advises us that from information already obtained he understands there will be a good representation of European orchid people present on that occasion.

THE official catalogue of the National Sweet Pea Society of England has been published. So numerous are the varieties that they fill a book of 16 pages and they are carefully arranged alphabetically. New varieties are printed in heavy type and the certificates awarded are indicated. This is to be kept up-to-date in future editions and is a very useful publication for reference by growers.

American Carnation Society.

CARNATION REGISTERED.

Baur & Smith, Indianapolis, Ind., register new carnation, Shasta. Parentage pink seeding X Enchantress. Color pure glistening white at all times. Bloom well formed and 3 to 3½ inches across. Extra free and early in blooming and does not crop. Does not split its calyx.

A. F. J. BAUR, Sec'y.

Chrysanthemum Society of America.

ED. AMERICAN FLORIST:—

The notes of President Smith in your last issue regarding increasing the membership of the C. S. A. are timely and to the point, and it is a fact that although many florists watch the reports of the different committees in the fall, still they are indifferent about joining the society or being actively interested in it. There are some, I know, who believe that all the work now being done by the different societies, such as the rose society, the carnation society and the chrysanthemum society, should be done by such sub-committees of the Society of American Florists, and I am not prepared to say but what that would be the ideal way. In the meantime, however, what should be done about it? Surely the chrysanthemum society is worth the annual dues of $2, which is all the applicant is asked to contribute. Every florist in the country, not to mention the hundreds of private gardeners and amateur growers, can find valuable information in the yearly reports.

President Smith and his committees are willing to work and make this the banner year of this society, so, brother growers, show your interest in the matter. In the current slang of the day, "It's up to you." C. H. TOTTY.

ED. AMERICAN FLORIST:—

Having read President Smith's appeal to horticulturists, private and commercial, for their support in pushing along the undoubted good work of the Chrysanthemum Society of America, I wish to heartily endorse all he says in its behalf, and I hope every lover of the queen of autumn will get in line and send in his name and annual subscription. EDWIN JENKINS.

The Way the Wind Blows.

Mark Twain says the wind blows from the north, or the south, or the east, or the west, or some point approximating in those general directions.

I see in a contemporary that Alex. Montgomery, Jr., is leaving the paternal roof tree, and starting in for himself, or in other words going into business. I wish him success when he starts, I have met the young man several times, and those who know him of course understand that he knows his business, a modest unassuming young man. It is a hard road for one who has an illustrious father, to make a mark for himself, for the brilliancy of the parent obscures the struggling light of the son, but he seems to be one of the few to have attained that distinction. I am glad he is cutting loose, for a young man's individuality is lost in a corporation. I am glad the name is to be perpetuated in a firm name. It is fitting to be so, like May, Pierson, Elliot, and many more who will take up the reins where the fathers lay them down and keep the names along in American rose growing.

Boston seems to be a great place these days. I see by a New York contemporary that E. Holmes said at the meeting of the Gardeners' and Florists' Club, that anyone with the proper facilities for handling might propagate a quarter of a million plants from one bud in two years. This is a somewhat startling statement, and I should like to hear what the rose men say about it. If there is so much money in rose growing as that, let us all throw down our present occupation and grow rose plants. Why, in three years from one bud every greenhouse in the world could be stocked with roses. I wonder if Mr. Holmes has done it or is it just theory. Theory and practice are often widely separated. The above can give points it seems to the story about the horseshoe and the doubling of the pennies. Indeed we are living in a great age.

I was much interested in the paper read by Robert Cameron on perennials; it was very interesting reading. Florists ought to read every word of it, there is always room about a florist's place for a border of such plants; many of us had forgotten about them. Having seen so many shrubs being planted, I believe there is a valuable asset in having a good border of those plants. Robert is one of those men who can talk on anything horticultural and talk sense. There are men who imagine they know, and don't know that they don't know, and it makes one weary to hear such men expounding on things pertaining to horticulture, when the limit of their knowledge is dandelions and chickweed.

Wm. Downs and wife led the members of the Gardeners' and Florists' Club of Boston on to a victorious supper. I see the ladies graced the occasion; that is one strong point in the Boston club I hear. The presence of the dear things would make the supper more enjoyable. I remember in the old days that the annual banquet was a stag party, but I am glad to see that the various clubs in the country are having the ladies grace the occasions and enjoy the good things provided. It is but right that wives and sweethearts should enjoy those annual affairs.

RAFFIA STRINGS.

Meetings Next Week.

Baltimore, Md., May 10, 8 p. m.—Gardeners' Club of Baltimore, Florists' Exchange hall, St. Paul and Franklin streets.

Hartford, Conn., May 14, 8 p. m.—The Connecticut Horticultural Society, County building.

Leading Cemeteries,	Postage Rates,	Express Rates,	Statistics.

*With new officers to date.

AMERICAN FLORIST CO., 324 Dearborn St., Chicago, U. S. A.

OBITUARY.

Herman Dreyer.

Herman Dreyer, a well known and successful plant grower of Woodside, Borough of Queens, New York, died April 28, after a very brief illness of pneumonia. He was born September 21, 1859, in that part of New York now known as Seventy-seventh street and Eleventh avenue. His father conducted a market garden in that locality and after receiving a public school education Herman assisted his parents in carrying on the business. When 22 years old he removed to Woodside and started in business for himself as a market gardener, beginning his career as a florist by growing violets. He soon branched out into the growing of foliage plants and Easter stock, and abandoned the market gardening features.

In 1905 he sold his original range, which was located at Jackson and Woodside avenues and, having previously secured a tract of land about one mile further out Jackson avenue, he there relocated. In the new location he was eminently successful with palms, ferns, foliage plants and a variety of forcing stock. In addition to a range of about 75,000 square feet of glass, a handsome residence was erected and the well-kept grounds have been an attraction to those who traveled Jackson avenue, which is the main thoroughfare from Long Island City to Flushing, College Point and Elmhurst. Mr. Dreyer was highly esteemed by members of the trade throughout New York and vicinity, and none bears stronger testimony as to his worth than those who have been his near neighbors. He is survived by a wife, nee Regina Schroder, and three children, Gerald M., aged 22; Mabel, aged 18, and Henry H., aged 16 years. He was a member of Island City lodge 586, F. and A. M., the New York Florists' Club, New York and New Jersey Association of Plant Growers and the Exempt Firemen's association. The funeral was held from the family home, Jackson avenue, on May 1, at 1 p. m., many members of the above-mentioned organizations attending.

John A. Shellem.

John A. Shellem, a well-known florist of Philadelphia, died in St. Agnes hospital May 3. Deceased had been failing in health for the past six months, being unable to attend to business, which has been carried on by his wife and sons, who will continue the same. The store and greenhouses at Seventeenth and Moore streets and the large range of glass at Magazine lane and Rope Ferry road comprise the plant, in which quite an extensive business is done.

Mr. Shellem was born in Philadelphia March 27, 1850. From his youth he was always a lover of flowers, and although he became an iron moulder by trade he soon gave this up and commenced business as a florist at Seventeenth and Tasker streets in 1880. Some years later he sold a portion of his ground for a public school and erected the plant at Magazine lane. His specialties were peonies, of which he had a large stock, and a general line to supply his store trade. He raised and sent out some very meritorious plants, the most notable being the rose, Wm. R. Smith, a cross between Isabella Sprunt and Maman Cochet, a variety which has achieved great success in Europe and this country as a bedding rose. He also sent out the fine early white chrysanthemum, Early Snow, which is conceded to be the best early of its color. Queen Alexandria daisy was also improved by him, some of the stock producing extra fine double flowers. An extra large-flowered freesia of the purest white was also one of his productions. He was a member of the Florists' Club of Philadelphia, before which he was frequently a valued exhibitor. Mr. Shellem was of a genial disposition and a general favorite with all who knew him. He was never happier than when doing a favor for a friend or lending a helping hand to someone in the craft. He leaves a widow, six sons and one daughter.

The Late Herman Dreyer.

Grant Thorburn.

Grant Thorburn, a grandson of the Grant Thorburn who founded the well-known seed house of J. M. Thorburn & Co., New York, died in Paris, France, April 30, aged 81 years. Although he had been a member of the firm he never took an active part in the conduct of its affairs. In the early eighties he went abroad and much of his time has been spent in Paris. He was a son of Geo. Thorburn and a brother to the late J. M. Thorburn, who died at 117 E. Tenth street, New York, April 24, 1899. Grant Thorburn is survived by a wife, a son, Wm. H. S. Thorburn of London, England, and a daughter, who was married to a Frenchman several months ago. A grandson named Grant Thorburn resides in New York, at 69 Madison avenue.

J. C. Rossow.

J. C. Rossow, for many years a grower, formerly of Union Hill but more recently of Carlstadt, N. J., died April 29. He had been a member of the New York Cut Flower Exchange from the time of its organization and marketed his stock there. In past years he grew many fine Ulrich Brunner roses. He was over 70 years old.

CENTERVILLE, IA.—T. M. Stagner has opened a new greenhouse on South Twenty-first street.

NORTH ABINGDON, MASS.—Vandals destroyed 1,700 young trees, belonging to the Bay State Nurseries, by slashing them with knives and axes.

FARGO, N. D.—The Shotwell Floral Co. is erecting three new greenhouses each 22x100 feet. They will be used exclusively for the growing of roses and carnations.

PEORIA, ILL.—Joseph Cole has entered suit against his brothers, James and Nelson Cole, for a share of his father's estate, which is valued at $115,000.—Danforth Miller, of the landscape department of Vaughan's Nurseries, Western Springs, is here this week on business.

Bassett & Washburn,

Store and Office: 76 Wabash Ave. **CHICAGO.** Greenhouses: HINSDALE, ILLINOIS.

Chicago Notes.

W. D. Chandler, one of the old-time florists of this city, was married April 22 to Mary E. Moore, whom he had known as a girl back in his Connecticut home. Mr. and Mrs. Chandler are of an age, both having celebrated their seventy-fifth birthdays. It was Mr. Chandler who in 1875 owned the Pleasantonian Floral Parlor at the corner of State and Randolph streets. This place was named after Gen. Pleasanton, who about that time advanced his curious theory that plants would thrive better under blue glass than clear. Every alternate pane of glass in this place was of blue. It is interesting now to recall that this corner, with 160 feet fronting on State street, was then leased for only $25 per month.

An institution that should interest visiting florists as well as those in the local trade is that of the Florentine Alabaster Co., at 52 Wabash avenue. Here the entire fifth floor is given up, as its name implies, to the making of articles of a composition resembling alabaster in appearance of considerable artistic merit. Many of the best local retailers are already handling the window boxes and jardiniers of this concern. The same are also made of cement.

Chas. Handel, formerly with N. Bommersbach, of Decatur, has just closed a five-years' lease for the greenhouses of Amelia M. Schaffer, 229 Balmoral avenue. These include five houses, 25x265 feet, at present planted to carnations. Mr. Handel will assume charge on June 1 and will immediately plant the entire place to Richmond, Killarney and White Killarney roses.

E. C. Amling says he thinks that in the future for a grower to reap any profit from sweet peas, they will have to be grown as a specialty and no longer as a side issue, as most of the sweet pea men have done thus far. Mr. Amling has been showing a fine lot of ixias, also some early peonies, Officinalis rosea and O. rubra both being seen.

Geo. Reinberg has two houses of Richmond roses that are very shapely and remarkably well set with buds. They are the plants from which the flowers were cut that took first prize at Philadelphia two years ago. Some fine Cattleya Mossiæ are also seen here.

The A. L. Randall Co. has taken possession of the fourth and fifth floors of the building the firm is in. This gives the firm the entire building except the first floor and basement and a total floor area of 24,000 square feet, not including balconies.

The J. B. Deamud Co. is now receiving some very fine Winsor, White Perfection, Lady Bountiful, Aristocrat and Lawson carnations. The firm is also receiving some fine large daisies, as well as gladiolus of mixed strains.

Louis Mohn, aged 73, father of Geo. Mohn of Vaughan's Seed Store, and father-in-law of W. P. Kyle of the J. B. Deamud Co., died on Friday last and was buried Sunday in Mt. Greenwood cemetery.

The big rise in temperature on Wednesday sent all of Peter Reinberg's girls out to the carnation farm. They appeared to enjoy the opportunity to be outdoors.

Mrs. C. A. McKellar returned last Saturday from Paris, Tex., where she has been the past five weeks with her mother who was seriously ill.

Peter Reinberg has an exceptionally heavy crop of young Bride and American Beauty roses and is ready to meet any demand for his stock.

C. Swanson, 3925 Ridgway avenue, has taken out a permit to build three greenhouses at Forty-fifth street and Western avenue.

Arrangements are pending for the lease of the Chicago Carnation Co.'s retail store in Joliet by the Schiller estate.

F. J. Farney is no longer traveling for the A. L. Randall Co., but is now with M. Rice & Co., of Philadelphia.

C. A. McKellar says Cattleya Mossiæ is in good crop.

Visitors: C. A. Johnson, Chillicothe, O.; F. A. Forbes, Plymouth, Ind.

GARDENERS' AND FLORISTS' UNION.

Gardeners' and Florists' Union No. 10615 has closed shop agreements with two amusement parks, Riverview park and Forest park, where none but union men will be employed during the ensuing year.

A canvass of labor unions and union shops just completed shows that $12,428 worth of work (floral) has been bought during the past year which demanded the union label.

A question box will be a feature of the meetings of Union No. 10615 hereafter. Questions may be dropped in the box and will be answered publicly.

No union gardeners are at present unemployed.

(OTHER CHICAGO NEWS ON P. 756.)

LINCOLN, ILL.—W. H. Gullett & Sons are building a new greenhouse on Kankakee street, between Tremont and Peoria streets.

WILLIAMSBURG, IOWA.—F. O. Harrington has shipped 1,000 goldfish to the Iowa Seed Co. of Des Moines, reserving 2,300 in a tank for future sale.

ST. PAUL, MINN.—Andrew Lauritsen, has filed a petition in bankruptcy in the federal district court. His liabilities exceed his assets by about $2,000.

Chrysanthemums

The Novelty of the Season.
Pink, $1.00 per bunch; Yellow, $1.25 to $1.50 per bunch.

Killarney Fancy, selected. The best grown stock in the United States. Must be seen to be appreciated.

St. Louis.

WEATHER VARIABLE.

The first part of the week was warm and sultry and one had the idea that the summer had started, but a change came on Thursday and on Friday morning overcoats and wraps were in order. This variety of weather has caused a delay in the planting out of gardens and lawns, but it is to be hoped that it will warm up and the weather become normal. Stock has become somewhat scarcer, although prices have not been very high all the week; they stiffened on Saturday. Colored carnations became scarce, though considerable white and Enchantress were cleaned up at low figures. Sweet peas are quoted at 35 to 50 cents. Considerable outdoor lilac is in, some of it nipped by the frost. Quite a few Lilium Harrisii and callas are in the market.

NOTES.

Young & Sons will do the planting at Delmar gardens. There is a new feature this season in a sunken garden which will be elaborately decorated with foliage and flowering plants.

Max Rotter, North Broadway, will shortly leave for Europe. He will visit Germany and spend the summer there.

At the Florists' Club meeting this week the transportation committee for S. A. F. matters will make its reports.

Visitor: J. Meiklejohn of H. Frank Darrow, New York.

W. F.

Omaha.

On April 28, about 5 a. m., we had the worst hailstorm ever known in this locality, especially on the north side of the city, taking in Paul Paulson, who lost 8,000 feet out of 10,000 feet of glass, A. Donaghue who lost about 30,000 feet, Hess & Swoboda, about 50,000 feet, Geo. Zimmers about 4,000 feet, Chas. Edwin about 20,000 feet, Paul Floth about 12,000 feet, J. W. Arnold about 6,000 feet, Sprague Street Greenhouses about 2,000 feet, Krug's Park Greenhouse, 1,500 feet, and S. R. Faulkner 2,000 feet. The south side growers had very little damage and those at Council Bluffs did not suffer much. Worst of all, it turned into cold rain and heavy wind and the stock will suffer immensely.

The night of April 30 to May 1 did thousands of dollars' worth of damage to A. Donahue, Hess & Swoboda, C. Ederer, P. B. Floth, P. Paulsen, J. W. Arnold, and in fact to all the north side florists, as on the evening of April 30 a strong cold wind with snow set in and the thermometer dropped to 25°. The above mentioned had almost all their glass broken April 28. It froze almost everything. The roses did not suffer as much as the carnations; bedding plants are all right with the exception of soft stock. It is a pitiful sight to look at the houses and stock. Hundreds of dollars' worth of muslin was bought to protect from the cold, but it helped very little. It seems the Chatenay, Richmond and Killarney roses stood the best. It will take close to 150,000 feet of glass to replace all the glass broken April 28, and it will take months of hard work to replace it.

GRIPPE.

Cleveland.

PRICES LOW.

The past week has been nearly a repetition of the week previous, both in weather conditions and business. Although Monday's sales were fairly good, prices were very low, which alone made it possible to move stock. Saturday and Sunday's business were very good, and had Easter prices prevailed, the holidays' record for high sales would have been broken. As it was it nearly reached that mark. By 9 o'clock Saturday morning there was not a good carnation to be had, and some of the buyers who waited too long had to wait until the late afternoon shipments for their carnations. Prices were a trifle in advance Saturday and Sunday, owing to short cut in carnations on account of the dark and cloudy weather. Everything sold up clean by Sunday noon. Rose sales were again all the rage this week. Good eastern fancy fern is now on the market at $2 per 1,000. Bulbous stock has not been overabundant this week, and calls for same not very great. Callas, Easter lilies and white roses had good call Saturday and Sunday.

NOTES

The Baker-Bradley wedding Wednesday in Lakewood was one of the season's most beautiful home weddings. As a setting for the ceremony the broad porch facing the lake was enclosed and trimmed as an arbor with trailing vines and palms and clusters of Killarney roses. An altar in the living room had a background of white snapdragon, lilacs and palms. The halls were decorated with palms, American Beauty roses and baskets of tulips. The flower girls carried forget-me-nots. The maid of honor carried Mrs. Jardine roses. The bride wore orange blossoms and carried a bouquet of white Spanish iris, lily of the valley and orchids. Smith & Fetters had the decoration and furnished palms, etc.

It is with sincere regret we announce the death of Mrs. Smith, mother of Frank Smith of Smith & Fetters. She died Sunday afternoon at her home on Russell avenue. The services were held Tuesday afternoon at 1:30 p. m. at her late residence. The remains will be sent to her old home in Bristol, Conn., for burial. We extend our heartfelt sympathy to Mr. Smith in his hour of grief.

F. J. Stehle, Lorain, suffered severely from last week's storm the loss in glass being so great that he missed several of his regular shipments of peas.

Mrs. Lamborn, wife of L. L. Lamborn, Alliance, is in Europe, making an extended tour, while her daughter is visiting friends in Kansas City, Mo.

Cleveland Florists' Exchange is showing a fine lot of orchids, which are selling at 35 to 60 cents each.

Isaac Kennedy, West Park, reports that last week's storms again caused considerable loss.

G. L. Loeffelbein has been sick a long time but at the last report he was a little better.

Ella Grant Wilson reports her stock and greenhouses are again in good shape.

Give Us a Trial. We Can Please You

Roses, Carnations and all kinds of Seasonable Flowers in Stock.

WM. F. KASTING CO. Wholesale Commission Florists.
BUFFALO, N. Y.
Florists' Supplies and Wire Designs.

GIRARD, O.—Wm. Gerke has moved into his new house on Washington avenue, next to the greenhouse.

BISMARCK, N. D.—R. D. Hoskins has begun work on his new greenhouse, which is to be modern in every respect.

HOLLYWOOD, CALIF.—The floral parade on May day which wound up the flower festival was the most brilliant and beautiful ever held in this part of the country.

FARGO, N. D.—It is proposed to build and run a greenhouse in Island park for providing cut flowers and bedding stock. Some of the old boilers now at the pumping station may be used for heating.

LOS ANGELES, CALIF.—The horticultural commissioners are supplying the residents with a liquid wash with which to spray their rose bushes and other plants that are infested with the common green aphis.

GALVESTON, TEX.—A number of prominent florists of this state are organizing a $50,000 company for the growing of flowers, palms and tropical plants on a large scale, and for this purpose propose to purchase a large tract of land on the island.

LOS GATOS, CALIF.—The May Day floral carnival this year was the most successful ever held in this city. A great many exhibits of cut flowers, decorative plants and floral designs were made by the dealers, while the amateurs gave a beautiful display of wild and garden flowers. Prizes ranging from $1 to $20 were awarded.

ST. LOUIS, MO.—Henry Russe stopped in front of 3869 Folsom avenue with a wagon laden with flowers which he offered for sale. Four negroes took a hand in the bargaining. "Ah wants er gemeranian," said one. He bought two or three other plants and tendered a $5 gold piece. Russe drew forth a capacious bag containing $100 in bills and change, but he could not break the five so he put the bag back into his coat pocket and went into a store. The one negro got his change and the other three decamped. A little later Russe discovered that his bag and the $100 had been slipped from his pocket. The police are after the negroes.

Extra Fancy Carnation Blooms

CARNATIONS SCARCE.

Last week all kinds of cut flowers were plentiful and the market was dull and lifeless. But on Saturday a turn was taken for the better, the supply of carnations shortening up on account of the bad weather of the previous days. The clear weather succeeding the storm also strengthened the demand and by Saturday carnations were selling at $3 per 100. Enchantress was the one variety that was in good supply. Roses, including American Beauty, stiffened in price in sympathy with the market for carnations. Good callas are selling well, though many poor ones are seen. That is bringing down the average returns to growers. Harrisii lilies are one of the scarce items. Sweet peas are of good quality and are selling well, especially so as violets are practically over for the season. There are Dutch hyacinths, white tulips and a few daffodils on the market, but bulb stock generally is slow sale. Common ferns have advanced to $4 and $5 per 1,000. There are plenty of Asparagus plumosus and A. Sprengeri sprays, but asparagus strings are rather scarce as are also strings of smilax.

GREENHOUSES WRECKED BY STORM, AT HEIM BROS., BLUE ISLAND, ILL.

George and Edward Heim in Foreground.

STORM DAMAGE TO GREENHOUSES

The greenhouse property in and near the city that suffered serious damage on the evening of April 29, was considerable. Probably the heaviest damage was done when lightning brought down the 85-foot chimney of the N. C. Moore Co., of Morton Grove. The entire boiler shed was entirely demolished, as was also all the machinery in it, including a new gasoline engine just installed. One greenhouse, 22x115 feet, was also ruined. Considerable glass was lost in other houses by flying bricks and the high wind that prevailed at the time. It is estimated that it will take about 400 boxes of glass to repair the damaged houses, and the entire money loss to the establishment is estimated at about $4,000. Fortunately most of the bedding stock was uninjured.

Plant B of the Poehlmann Bros. Co. suffered considerable damage entirely from the wind, which blew with hurricane force, coming with the suddenness of a gust. Considerable glass was lost along the whole west side of the range, the ends of some of the greenhouses being blown entirely out. About 5,000 panes of glass were blown out. One of the new structures that did not yet have the glass in was badly wrenched.

Both wind and hail were responsible for the very heavy damage to the establishment of Heim Bros., at Blue Island. Hail came first and broke a great deal of glass and the heavy wind storm that followed demolished the brick boiler shed and two greenhouses, each 28x225 feet. Another house of the same size was so badly twisted that it will have to be torn down and rebuilt. Fortunately neither boilers nor machinery were damaged, but the loss to growing stock is heavy. There were 5,000 rose plants in 4-inch pots, hardly one-quarter of which can be saved. Much of the bedding stock was also ruined. All told Edward Heim figures the firm's loss at from $4,000 to $5,000, only partially covered by hail insurance.

Lightning struck the smokestack of H. P. Gerhardt's greenhouses at Glenview, and this crashing down on the middle house opened a pocket which let in the high wind, which tore out large sections of the frame work in all of the houses. A freeze-up following lost Mr. Gerhardt $1,500 worth of bedding stock.

The conservatories at Garfield park suffered seriously from the storm. This last storm took out nearly 700 24-inch panes of frosted glass. The propagating houses suffered no damage whatever, but the hotbed sash were blown about with considerable loss of glass. About 25 sash were entirely destroyed.

Frank Oechslin had a chimney blown from his cold storage house and some glass broken. The entire loss, including some plants, is about $300.

The greenhouses of St. Mary's cemetery at Evergreen Park suffered little damage, but several sheds were entirely blown away.

APRIL WEATHER.

April, according to the government's monthly record, had only three clear days, 14 partly cloudy days and 13 cloudy ones. There were 16 days in which .01 inch or more of precipitation occurred. The total precipitation for the month was 7.73 inches, or an excess of 4.83 inches as compared with the average precipitation of this month for the past 39 years. In some places near this city many thought the wind reached its highest velocity on April 29, but the records at the weather bureau show the highest velocity for five minutes to be 60 miles per hour on April 7. The highest temperature was 74° on April 5 and the lowest 25° on April 10. The mean temperature for the month was 45.1°, or a deficiency of 1.2° as compared with the average mean for the past 39 years. Killing frosts were experienced April 8, 9 and 10, heavy frosts on April 23 and 26 and light frost on April 22.

HORTICULTURAL SOCIETY

A meeting of the executive committee was held May 3, J. C. Vaughan in the chair. It was a banner meeting, for in addition to the chairman all the members were present, namely, W. N. Rudd, J. B. Deamud, Aug. Poehlmann, Geo. Asmus, J. H. Burdett, Leonard Kill and Carl Cropp. It was decided to have a flower show in the first part of November and Messrs. Rudd, Poehlmann and Cropp were appointed a committee to confer with the committee appointed by the Florists' Club to co-operate with the society in the matter of a fall exhibition. Messrs. Asmus, Kanst and Deamud were appointed a committee on preliminary premium list and Mr. Cropp a committee of one to secure details of plans for floor arrangements and report to the committee. A prize of $50 was authorized for the best flower show poster design.

Telephone: 1016 Madison Sq. 46 W. 28th St., NEW YORK

Ship us some stock. We need a large supply of all kinds of flowers, **Roses, Carnations, Sweet Peas, Narcissus, Summer Stock, etc.,** for our new store. Reliability and responsibility first-class. Good prices and prompt returns. Good opportunity.

New York.

STOCK VERY CHEAP.

The weather was the controlling factor in the business of the past week. The market on the first three days was rather listless, but that was only the beginning of sorrows. On April 29 there was an old-fashioned snow storm, one of the kind that would have done credit to Newfoundland or Nova Scotia in the month of March. Running the gamut through hail, sleet and pouring rain, the week closed in discomfort and gloom. Of a necessity there was more business on Saturday, but stock sold very cheap, in spite of the fact that so much dark and cold weather was shortening the supply, particularly in tea roses. We saw long stemmed red roses, two feet and over, sold on the streets on May 1 by the armful, at least the vendors had armfuls of them. They started the price at ten cents each, but the ways of the peddler are well known. Cattleyas were the only stock that brought a price commensurate with expectations, running from 60 cents to in some instances $1 each. During the week there were a few weddings but all the stock they took made no appreciable impression in the wholesale district.

NOTES.

Moving day brought a number of changes of location in the wholesale district. Gunther Bros. moved from 114 to 110 W. Twenty-eighth street. It is likely that Russin & Hafing, the supply men, who now occupy the upper floors of 114, will hereafter also use the store vacated by the Gunthers. In the Coogan building, Twenty-sixth street and Sixth avenue, B. S. Slinn, Jr., and A. Sauter, who have occupied the same store on the ground floor, have moved up one flight and are now sharing space in the large room occupied by Perkins & Nelson.

The next monthly meeting of the Florists' Club will be held in the Grand opera house, Twenty-third street and Eighth avenue, on the night of May 10. Secretary Young announces that Patrick O'Mara will read a paper prepared by the venerable Chas. Allen of Floral Park, on "Plant Development." As Mr. Allen is, unfortunately, at present in ill health, it will be impossible for him to attend in person and read the paper himself; hence Mr. O'Mara has kindly consented to read the paper at that meeting.

Miss Billie Burke, totally surrounded by flowers, left for Europe April 28 on the Lusitania. If all the bouquets that were sent her had been put in her stateroom the little actress would have been crowded out. Almost every well-known actor and actress playing in the city was in the procession that went to her cabin, and the room was completely filled with them and with flowers when four men appeared bearing a floral ship, about eight feet long, and bearing the bold device "Lusitania."

Joseph G. Leikens, with stores at Fifth avenue and Fifty-sixth street, the Belmont hotel and at Newport, R. I., has secured the flower store in the Plaza hotel, having taken possession May 1. Mr. Leikens is an enterprising young man and is to be congratulated on the acquisition of this valuable privilege.

It is expected that the new Manhattan Flower Market, 46 West Twenty-eighth street, will open for business on May 8. The store is commodious and convenient and the character of the men behind the venture promises well for its future.

On April 30 counsel for the Retail Florists' Association secured the conviction of four boys, charged with vending flowers on the streets without licenses. They were fined $2 each.

Geo. D. Baker, bookkeeper for Ford Bros., is ill, but it is hoped that he will soon be able to resume his duties at the store, where he is greatly missed.

The Flatbush carnation growers are waiting for better weather to begin field planting.

Visitors: A. N. Pierson, Cromwell, Conn.; Geo. Watson, Philadelphia.

Buffalo.

CARNATIONS SHORT.

Weather the past week has been what might be expected in February or March, cold rain and heavy snows, the changes being so rapid that we could shovel snow one day and within 24 hours mow the lawn. With conditions such as that trade has not been good, but stock has been plentiful, carnations alone showing a tendency to scarceness. Society has not been very busy the past two weeks. Several weddings of small proportions gave a little work. One wedding April 27, while not large from a decorative point, gave S. A. Anderson an order for some very elaborate bouquets, lily of the valley, Killarney roses, orchids and sweet peas being used in the different bunches which were beauties and the arrangements entirely new. Bargains on Saturday have been regular since Easter in violets, roses and carnations for one week. It is a question whether a bargain each Saturday does not make some wait and see what they can get and thereby make trade quiet for the preceding days. In the case of violets they are always wanted for Sunday and at a low price for strictly fresh flowers the sale is very large.

RETAIL STORES.

The coming week will see the opening of the new retail store of Wm. Stroh and Arthur Beyer. Also the removal of J. G. Pickelman from his Washington street store to a new location on Genesee street. Joseph Sangster, who had a store on Jefferson street, has removed to the corner of Jefferson and Utica in a larger store and a better location. He is in what is termed Northeast Buffalo and a rapidly growing locality.

Superintendent Filer of the forestry department has postponed further work on the trees until the weather gets more favorable. Park Superintendent Seymour will give us more flower beds and a better arrangement than ever before if the appropriations that he asks for are allowed.

Wm. F. Kasting, as one of the commissioners for the widening of Elmwood avenue, has completed the work and the awards were very satisfactory.

J. B. Wiese, the czar of the Chippewa market, will depart for the old country with his daughters in about four weeks.

Wm. Sievers, who is out on Genesee near Jefferson, has fitted up his store and if trade keeps up will have to enlarge.

Visitors: Harry Balsley, Detroit, Mich.; Chas. S. Ford, Philadelphia, Pa.

BISON.

Providence, R. I.

TRADE QUIET.

Business has been quiet for two weeks and stock has fallen in price, carnations and roses being abundant and good. Roses wholesale from one to five cents for excellent quality. Carnations bring one to two cents.

The local Florists' Club, as already noted, had a couple of heated sessions recently over the matter of the Agricultural College wholesaling their carnations in this city, thereby being in competition with the trade. Direct charges of bad faith were brought against Prof. Wheeler of the college, it being claimed by the club members that he had promised in the past that he would not allow his product to be sold here. The matter was given wide publicity in the papers but thanks to good fortune more than good intent, the affair has been settled without much harm having been done the florists or Prof. Wheeler. Mr. Wheeler was invited by the club to attend the recent meeting and explain his position, which he satisfactorily did, and gave the members the assurance that the trade would not be bothered in the future. And now all is serene again.

Arbutus from Cape Cod has been received daily by John F. Wood, who makes a specialty of this flower, receiving very heavy consignments at times and selling them as low as 10 cents per bunch, regular price 25 cents.

T. J. Johnston & Co. have a new bas-relief sign of copper-finish metal outside their window, about as fancy an affair as can be seen in town.

The Rhode Island Greenhouses, Pawtucket, are for sale at auction this week. This range has a history of misfortune and hard luck that would send many proprietors to their final rest. According to experts the houses were laid the wrong way and have failed to deliver a winter crop from the start. Money was not spared in their construction and the best of everything was obtained by Harrison & Storer, the original proprietors. But the affair was a loss from the beginning. A few years ago J. F. Barclay secured them and left his home town in New York state to succeed Mr. Millar. He grew fine greens exclusively the past two seasons, which was the only thing the houses seemed adapted to, but the expense of maintenance was too great and he had the sympathy of every grower who understood his handicap. Houses that cost probably $25,000 will go under the hammer for as few hundreds this week.

M. M.

WASHINGTON, D. C.—Listing their debts at $2,803, J. M. Hammer & Sons, 64 Florida avenue, filed a petition in voluntary bankruptcy April 28. They say their assets are worth only $523. A number of foreign concerns are among the creditors listed. They are Jacs Smits, of Naarden; H. Zipp & Co., Leisse; C. J. Speelman, of Sassenheim, and C. Kuer & Son, of Hillegom, all Holland.

A SHORTAGE OF STOCK.

There has been quite a shortage in the stock coming in the past week, carnations falling off all at once. The warm weather of a week ago, followed by the decidedly chilly spell which at this writing is still on, there being ice in the gutters this (Monday) morning, has held back the crop so that everything in the carnation line sells up clean every day at good prices, $3 being about the figure for most stock. Roses are still very plentiful. American Beauty, large and small, is again a factor. The specials are in full supply at $2 and $2.50 per dozen. A few My Maryland are now coming in, and as the cuttings are all rooted quite a few choice flowers are looked for soon. At Myers & Samtman's, Chestnut Hill, 60,000 plants have been raised from a stock of 1,200 since last November and all are sold; this is surely a record. Easter lilies and callas are plentiful and cheap. Sweet peas and snapdragon are factors and sell well. There appears to be an increasing demand for lily of the valley, the public never tiring of its form and fragrance. Violets are almost done, and there are few left, but one more hot day will finish them. Blossoms are now in good demand; apple blossoms were in their prime last week, the cool weather bringing them along slowly. Dogwood, just in, is a good seller, being always popular with the public.

NOTES.

The feature of the week in commission circles was the Keegan failure, some of the firms being hit pretty hard. The proposition to pay 25 per cent was raised another 25 after the meeting of the creditors and an inspection of the books. An offer has been made for the business as a going concern, and this, together with newly discovered book accounts, is to pay the additional 25 per cent.

The shipping trade is reported good and a great relief to the overstocked market. The Niessen Co. says its out-of-town customers are liberal buyers, taking advantage of the low prices and pushing business with the low figures they are able to offer. The dwarf gladioli are a novelty here with choice American Beauty and Killarney roses.

The Florex Gardens are taking orders for American Beauty roses with any length of stem. They say the results from the large house are most satisfactory, and the preparatory work on the new one is so far advanced that erection will soon commence.

The sympathy of the trade goes out to Mrs. Shellem and her family in their great loss, Mr. Shellem being a popular and valued member of the craft. A short sketch of Mr. Shellem's life is given in our obituary column, page 752.

Harry Bayersdorfer and wife sailed on Thursday on the Prince Henry Wilhelm for the annual tour of the European cities in search of novelties for the coming season.

Habermehl's had the decorations for the Grant dinner, which were very elaborate, all the choicest and best stock now on the market being used in large quantities.

E. Reid is to the front with American Beauty and Kaiserin roses. His New York violets are done for the season, which has been an unusually good one.

Wm. McKissick & Bros. feature American Beauty roses. Several of their growers are in crop and the stock is certainly A1. My Maryland is also offered. K.

WAYNE, PA.—Howard Clark is about to build two new greenhouses, each 18x100 feet and potting house 20x30 feet.

Boston.

PRICES BETTER.

Considering the weather conditions business has been as brisk as could be expected under the circumstances. The season which was already backward has been further handicapped by the low temperature and winter-like rains. Several frosts through the week set back whatever advancement that had been made in outdoor work. Stock opened up well the beginning of the week, but with only one sunny day staple lines shortened up rapidly and prices advanced materially. Carnations are shortening up gradually and we look for better prices from now on. Carnations at $1 per 100 have hitherto been out of the question at this time of year, but we find quantities not worth more and no more is expected for them. The best varieties bring $3. Roses, with the exception of American Beauty, are higher in price, though with little corresponding improvement in quality. A line of excellent Chatenay is being distributed by several growers. Richmond is running somewhat better, but too much attention has been given to the length of stem instead of strength where it would be more appreciated. A few good Carnots and Bridesmaids are on hand but the choice lies with the former varieties. Violets are still seen in scattered sections and these are to be cleared up during the present week. Good lily of the valley is decidedly scarce. Gardenias are flocking in from all points and are selling well. First-class blooms are not obtainable anywhere among the local growers. Gladioli have appeared and demand good figures. Sweet peas have suffered under the weather perhaps more than other stock and the scarcity of good flowers is regretted. Hydrangeas and Dorothy Perkins roses are the most attractive plants.

NOTES.

Thos. Roland, the plant specialist, is distributing some superb Perkins rambler roses that were late in flowering. They are in remarkable condition and distinctly superior to the stock of this plant at Easter, showing no effects of early forcing, and in color and finish are ideal. Maronia, a newcomer among the commercial plants, is also being marketed, and although a high-priced novelty has met with a hearty welcome.

J. S. Manter, the sales agent at the Park Street Market, is showing an excellent crop of Mme. Chatenay roses, the product of the Exeter Rose Conservatories, at Exeter, N. H. This is the concern which has steadily backed this rose, and while one of the first of its growers they refuse to abandon it, and the greater part of the establishment is planted with it, yielding a steady output right through the season.

Norris F. Comley, who in the past has achieved much fame as a violet grower, has attained remarkable success with his sweet peas this year. A large portion of his plant at Lexington is devoted to this stock and his daily shipments for several weeks have averaged 15,000 blooms.

Henry M. Robinson of the firm bearing his name is away on an extended southern trip which will occupy three weeks, devoted to both business and pleasure.

B.

SUGAR CREEK, PA.—H. C. Garrard is building a new greenhouse 17x70 feet.

NORTHFIELD, MASS.—Supper and a reception were given April 28 to celebrate Chas. W. Matoon's fortieth anniversary as church florist at the Unitarian church. During the 40 years Mr. Matoon has missed but four Sundays in his work of decorating the church.

Baltimore.

ROSES PLENTIFUL.

Bulbous stock is practically out of the market; also violets; carnations last week were pretty well cleared out, but roses were too abundant for the requirement of the market. A good many Lilium Harrisii are coming in, but the demand is not heavy.

NOTES.

Henry Fauth, a veteran gardener, died a few days ago at Catonsville, aged about 70 years. He had been for nearly half a century in the employ of B. N. Baker, and was an expert in the decorative as well as more homely lines of gardening, his effective bedding out and general floral effects always being much admired. He was of a family which seemed to run to gardening. His father, who reached a great age, for something like 60 years had charge of the grounds and gardens of the late Mrs. Lurman, one of the show places in this vicinity where the old style of English gardening, tall box hedges, much topiary work, and geometrical designs prevailed. This old gentleman, though in receipt probably of only the moderate wages which prevailed in his day, succeeded by frugality in accumulating an estate which was variously estimated as worth from $25,000 to $75,000, and left a number of sons, many of whom were florists. This class of worker is rapidly becoming extinct and is in great contrast with the feverish desire for constant changes and removals which affects the gardeners, especially on private places, at the present day.

We have had a long spell of cool, even cold weather, the temperature on several mornings falling to or below the freezing point. Outdoor stock is extremely slow in developing and wild and cultivated flowers are not in abundance. Much fear is expressed as to the fruit crops, the blossoms and setting fruit being just in the most tender condition. Another feature of this season has been the high wind storms, the prevailing gales being from the south, though not of the warm and balmy nature expected from that source, but cold, raw and piercing, due probably to the saturation of the atmosphere with moisture. A calendar of dates of the blossoming of hardy shrubs shows the season from seven to 10 days behind last year.

Considerable building will be done this season. Dennis Connor, who has charge of the interests in this territory of the Lord & Burnham Co., has bagged two good contracts for that enterprising firm. Lehr Bros. of Anne Arundel will put up a new carnation house 35x300 feet, and L. H. A. Klein of Towson two rose houses 20x100 feet. B. G. Merritt of Grange has given orders to the King Construction Co. for material for two carnation houses of about 100 feet in length.

John Cook, the veteran rosarian and hybridizer, who has been suffering with rheumatism for several months, is much improved and expects to be in the harness again before many days.

S. B.

NORTH COHASSET, MASS. — Alfred Cross has assumed charge of Col. A. A. Pope's greenhouse on Jerusalem Road.

WEST CHESTER, PA.—John Clark, a landscape gardener, has been ordered by the court to quit this state and continue to reside outside its borders. It was charged that while in a drunken condition a few evenings ago he made an attack upon a Normal school girl as she was walking on the street. His friends petitioned to have him sent away, which suggestion the court agreed to, and he was glad to accept the opportunity of escaping prison. He moved his effects into Delaware.

A BUSY WEEK.

This has been rather a busy week with decorations and funeral work. Among the wild flowers, which are so effective in church and house decorations, is the dogwood, which is easily disposed of at good prices. The late frost has injured lilac to a great extent and it begins to look as if there will be a scarcity. The fruit buds have also suffered from the same reason. It continues cool and the consequence is that outdoor stock will not be up to the standard.

NOTES.

The president and Mrs. Taft entertained a party of friends at dinner; the table decorations were of Killarney roses and the work of course was done by the White House florist. He is an expert in this line and has the entire stock of the White House greenhouses at his disposal.

Gude Bros. are displaying some handsome made-up baskets and a huge dogwood tree in their F street windows; this firm always does a flourishing business in both funeral and wedding work.

Geo. C. Shaffer had an immense amount of Masonic work for the funeral of Capt. Burnell. Masonic lodges from various cities sent pieces and this kept his entire force hustling.

Blackistone's was a busy place one day last week; they were busy with decorations and funeral work for notable people.

Marche & Co. report fair business; they make a good showing in the store and believe in window and trade paper advertising.

The Pennock Meehan Co. reports good trade and is making improvements in the New York avenue store.

J. R. Freeman has his store nicely decorated with all sorts of blossoms, plants and blooming shrubs in season.

Geo. H. Cooke has an unusual lot of table, luncheon and tea decorations.

—CHOICE—

Carnations, Roses, Beauties,

All Seasonable Flowers.

Pittsburg Florists' Exchange

15 Diamond Sq., PITTSBURG, PA.

Pittsburg.

STOCK MOVING WELL.

Saturday evening found the wholesale houses pretty well cleaned out. Carnations moved very slowly during the first part of the week, but towards the latter part the market seemed to brighten up and stock moved out nicely. The market is still slow on American Beauty roses, prices remaining about the same. Some very fine miniature gladioli, daisies, sweet peas and roses are in.

NOTES.

On Saturday last the city was visited by another terrific wind storm, accompanied by a heavy fall of rain; much damage was done throughout the country. T. F. Beckert of Coraopolis lost some glass and it is reported that F. H. Westhoff of De Haven also lost considerable.

Arthur and John James have taken hold of the old L. I. Neff greenhouses at Cheswick. Their place at New Kensington is handling their output.

F. Farney of M. Rice & Co., formerly with Randall's of Chicago, was a business caller, this being his initial trip.

J. B. Smith of McKeesport is moving into new quarters, which is opposite his former location.

The McCallum Co. is handling some fine My Maryland roses.

Visitors: Peter Nichols, Cleveland, O.; S. Wertheimer of Wertheimer Bros., New York; John James of New Kensington; Misses Forbes and Donahey, Wheeling; E. Bell, Franklin.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres.; C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

SWEET PEAS in southern California are reported in fine condition.

FREIGHT RATES on Dutch bulbs are likely to be 10 per cent higher owing to combinations made by steamer lines.

ST. JOSEPH, MO.—W. C. Kennedy has filed a petition in bankruptcy, liabilities about $8,000 and assets about $3,500.

THE cold, rainy and even snowy weather the past week has cut the retail counter seed trade seriously both east and west.

HJALMAR HARTMANN & Co., Copenhagen, Denmark, have changed their stores and office from 12 Stormgade to 20 Longangsstraede.

ONE of the largest contract pea growers is reported to have placed several thousand acres in a new growing section around Madison, S. D.

TARIFF.—Whether the fight now being made by Senator Dolliver and others for tariff revision downward will affect the seed and bulb schedules now in the hands of the two committees in congress is problematical.

EXTRA steamship service is being provided between Mexico and Spain by the Royal Mail line in order to carry the huge chick-pea crop, says the Mexican Herald. Mexico formerly made large purchases of these from Spain, but is now exporting them.

ALL seedsmen should see that their local newspapers make use of the excellent and seasonable articles issued regularly by the National Council of Horticulture. These articles, written by competent horticulturists, are reliable and valuable. Newspapers may secure this press service free on application to Jas. H. Burdett, 17 W. 104th place, Chicago.

CHICAGO.—Onion set growers have been set back seriously in their work by almost continuous rains, followed by a severe storm April 29.—Contract prices on the board of trade April 28 for grass seed were noted as follows: Prime timothy, $3.80 (nominal); white clover, $16.—Visitor: W. Taat, representing M. Van Waveren & Sons, Ltd., Hillegom, Holland.

PHILIPPE DE VILMORIN has been recently appointed by the French government a foreign commerce councilor.

NEW YORK.—Grant Thorburn, of the firm of J. M. Thorburn & Co., died in Paris, April 30. See obituary, page 752.

ALBANY, N. Y.—The senate has passed the bill prohibiting the sale of impure seeds unless they are so labeled.

THE legislature of Wyoming has passed a pure seed law which was approved February 27, 1909, to go into effect after January 1, 1910. The law requires agricultural seeds to be marked "Pure Seed" to conform to a standard of purity and vitality as indicated in the law.

John Bodger.
See Page 766.

THE new edition of the American Florist Co.'s Trade Directory contains the names and addresses of the leading florists, seedsmen and nurserymen of Mexico, Argentine Republic, Brazil, Chile, Colombia, Costa Rica, Guatemala, Nicaragua, Paraguay, Peru, Uruguay and Venezuela, a very important new feature.

TWO HUNDRED members of the New York produce exchange have organized to induce congress to place Danish cabbage on the free list, as they assert there is a demand in this country for the vegetable which cannot be supplied by home production. One of their principal arguments is that of reciprocation.

Might Become Free Seed Grafter.

Now Mr. Edwards of Georgia desires Congress to abolish the mileage allowance and pay only the actual railroad fare of members. So violent a reformer is bound to break down in some department or another, and we shall not be at all surprised to hear of him supporting the free seeds graft.—Houston Post.

Duty on Sugar Beet.

An attempt will be made shortly by the board of general appraisers to solve the problem whether a sugar beet is a "vegetable" or an unmanfactured, unenumerated article. The sugar interests allege that the sugar beet should be allowed to enter this country at 10 per cent, as being unenumerated, while the government contends that the beet has all the characteristics of a "vegetable," and should be dutiable at 25 per cent. The sugar concerns contend that the imposition of a 25 per cent duty imposes an unnecessary burden on them. The government asserts that the American farmers should receive adequate protection.

Garden Seed Crops in Pennsylvania.

Bristol, May 1.—All prospective seed crops in Pennsylvania, from wintered over crops of cabbage, kale, turnip, onion, parsnip and spinach are now under a very vigorous growth because of the abundant spring rains; indeed, some turnip and cabbage are in bloom, but the plants are thin on the ground, consequent upon the destructive influences of the past winter, during which quite one-third of the plants were frozen out or winded out. The drilling of "cold" soil seeds or very early sown spring crops, as of radish, spinach, lettuce, onion and mustard, has been delayed quite three weeks by reason of the continued exceedingly wet and cold soil, in which it has been inexpedient to sow even cold soil seed.

Of course nothing has yet been done with the seed of "warm" soil plants, as melons, cucumbers, squashes, corn and beans, as we have had, every morning for 10 days, more or less frost; throughout the days plowmen have been wearing their winter overcoats. Really November weather, delaying farm operations of every kind. Drilling onion seed for onion sets is now in full progress, but the speculative acreage in Pennsylvania every year grows less and less, for the reason that western sets are sold at prices lower than the Pennsylvania farmer can afford to grow them.

The growing of cabbage and turnip seed has also almost entirely ceased to be pursued by Pennsylvania market gardeners and farmers, because of the low prices at which foreign grown seeds of these sorts are imported. If the tariff on seeds was advanced to an equivalent of 60 per cent (specific) no less seed would be sold, while American growers of fine seeds in the east would have some chance to reëstablish themselves. It will be a profitable thing this year if the Pennsylvania turnip seed growers have a big crop, because the European prospects for turnip seeds are exceedingly bad, and, consequently, there is certain to be a shortage later on, as no appreciable quantity of American seed comes within the estimate of supplies in sight.

NOW READY 1909 EDITION **Trade Directory.**

John Bodger & Sons, Gardena, Calif.

The seed growing firm of John Bodger & Sons, Gardena, Calif., has been recently incorporated under the laws of California for $100,000, fully paid up, with John Bodger, president, Walter Bodger vice president, John Charles Bodger secretary and the National Bank of Long Beach treasurer. John Bodger, father of the boys, is a native of Somersetshire, England, and was in business over 20 years as seedsman, florist and nurseryman in Burnham. When the children were sufficiently grown, Mr. Bodger's ambition was to seek a more prosperous part of the globe, consequently the eldest son was sent to California to start out for himself and to report the prospects for the remainder of the family. At the end of one year he determined to leave the family, to investigate for himself, the chances of the new country, and left his wife and six children to carry on the business. In February, 1892, they were all reunited at Santa Paula, where John Bodger, with his eldest son, William James, started as John Bodger & Son on a small piece of 40 acres.

The business gradually increased, making it necessary to increase the acreage, so a larger ranch of 120 acres was leased. In 1902 John Bodger bought a ranch of 40 acres in Arroyo Grande valley and put Walter there to manage it in conjunction with the Santa Paula business. Later as there were no prospects of getting more land at Santa Paula, John Bodger again set out to find a locality where it could be secured, and found one piece of 353 acres 12 miles south of Los Angeles. At that time little attention was given to farming there, grain and hay being the only product, and Mr. Bodger bought this ranch for $40,000, sold off the land at Arroyo Grande, and all moved to Gardena and Los Angeles. John Bodger has now sold this ranch to the incorporated firm for $80,000, which, with an additional 150 acres, is planted to sweet peas of all the leading and newest varieties, and it is the ideal soil for developing flowers and maturing seed of these favorite flowers. These flowers are under the management of Walter Bodger, who takes special interest in their cultivation and personally superintends the rogueing and keeping of the separate colors true to name. At Alamitos the firm has another ranch of 250 acres, where tomatoes, lettuce and aster and other flower seeds are grown. This ranch has been under the superintendence of John Bodger, who has now retired from the arduous duties of the management, to devote his special care to improving the growing crops and especially to the improvement of asters, which are his most favorite flowers. This year 20 acres are planted and it is believed that this will produce seed that will give flowers of the type to please the most fastidious florist's trade. In addition to these two branches for raising garden and flower seeds several hundred acres are planted to Lima beans at Santa Paula for seed beans, of which this firm handles a large quantity.

ESCHSCHOLTZIAS in the new shades of red and pink are very attractive as shown in the colored catalogue plates.

CATALOGUES in plain but substantial and tasteful covers are the order of the day with prominent European houses.

"BULBS THAT BLOOM"

BETTER GLADIOLI THAN YOU HAVE EVER SEEN—YOU CAN GROW THEM.

Cedar Acres Gladioli command in the cut-flower market a price six times as high as the regular market rate, because the flowers are larger and finer than any procurable elsewhere With my bulbs and cultural directions you can grow the same kind. They are as easy to raise as potatoes.

The Gladiolus has become the queen of the garden. From the old-time scraggly spike, the Gladiolus has developed into a magnificent and stately plant, bearing a wealth of of color as delicate as the finest orchid. For cut-flowers, they are unequalled in beauty, and last for nearly ten days, gradually unfolding.

My new seedlings including the famous Harvard, Kathryn, and Fireside, have been awarded numerous medals and certificates of merit.

BOOKLET FREE, showing Harvard in full colors, and many other new varieties, with reliable information about each one. **Send for it today.**

PEACOCK DAHLIA FARMS, Williamstown Junc., N. J.

North Dakota Seed Bill.

Bismarck, N. D.—The so-called pure seed bill has now become a law and will take effect July 1. This law forbids the sale of any agricultural or garden seeds exceeding one pound in quantity which contains seeds of couch or quack grass, Canada thistle, sow thistle or dodder, and prohibits the sale of any agricultural or garden seeds in similar quantities containing more than a reasonable trace of the seeds of greater ragweed, cornflower, marsh elder, Russian pigweed, dandelion, chicory, Russian thistle, plantain, buck plantain, bracted plantain, white cockle, night-flowering catchfly, pink cockle, corn cockle, cow cockle, curled dock, sorrel, sheep-sorrel, purslane, bindweed, wild buckwheat, wild onion, wild oats, pigeon grass, holy grass, cress, mustard, tumbling mustard, hare's-ear mustard, pennycress, pepper grass, shepherd's purse, false flax, bird's-foot trefoil, yellow trefoil, bur clover, sweet clover, ergot, or of the seeds of any other noxious weeds.

Thus it will be seen that it is practically a blanket law and the noxious weeds are included. The punishment is a heavy fine for first offense and for second and subsequent offenses a materially heavier one. The enforcement of the bill is in charge of a state seed commissioner who has a right to enter any premises where seeds are kept. The certificate of the botanist of the North Dakota Agricultural College Experiment Station is presumptive evidence of violation of the law. Any person, firm or corporation is apparently liable for selling or offering seeds, whether it be farmer, grower, or dealer. All mixed seeds must be labeled on the exterior of the container with the correct common names of kinds composing the mixture. This would apparently apply to lawn grass seed.

The act does not apply to the sale or exposure for sale of unclean seed providing each package is plainly labeled as unclean seed. No such unclean seed will be sold or delivered within the state for sowing purposes without the consent of the purchaser. It is evident from the above that the seedsman in North Dakota could sell unclean field seeds for sowing purposes with safety if he secured the written consent of the purchaser and provided the same did not contain any of the forbidden weed seeds mentioned above.

Imports.

During the week ending May 1 imports were received at New York as follows:

Maltus & Ware, 120 cases, 201 pkgs. plants, 88 pkgs. laurel trees, 5 pkgs. trees and shrubs, 3 cases orchids.

McHutchison & Co., 37 cases plants, 54 tubs laurel trees.

F. B. Vandegrift & Co., 6 cases, 32 pkgs. plants, 4 cases trees, 2 tubs laurel trees.

Stumpp & Walter Co., 7 bbls. plants, 18 tubs, 1 pkg. laurel trees.

H. Frank Darrow, 7 cases plants.

A. T. Boddington, 3 cases rose plants.

Vaughan's Seed Store, one case plants.

J. Roehrs Co., 8 cases trees and shrubs, 500 pkgs. trees, 490 tubs laurel trees.

To others: 82 cases, 2 crates, 18 pkgs. plants, 456 pkgs., 388 bags, 200 baskets, 3 cases trees and shrubs, 396 tubs laurel trees, 1,430 bags, 55 bbls. seeds, 3 cases bulbs, 6 cases orchids.

INDIANAPOLIS, IND.—Geo. H. Swain is well pleased with the large increase in his sales. Huntington & Page have cleaned out their onion sets at good prices.—J.

CAREFUL SELECTION OF BOTH PLANTS and BULBS.

OUR grower, writing under date of April 12, says crop of "Harrisii" is looking exceptionally well this year, the season having been favorable to the development of good healthy plants, and they expect to harvest an average crop of fine bulbs. Remember, while we do not claim that our "Harrisii" are absolutely free from disease, or that every bulb will produce a perfect plant, we do claim that our grower's efforts in the way of spraying and rogueing are producing results, our stock now being freer from disease than ever before and of genuine "Harrisii" type, in fact, the best general crop grown on the Island of Bermuda.

Vaughan's Seed Store,
CHICAGO. NEW YORK.

Criticism of American Methods in China.

Vice-Consul Charles L. L. Williams, of Chefoo, furnishes the following information concerning the introduction of American seeds and fruits into China and the faulty methods of American exporters to that empire:

"The introduction of American fruit trees into Chefoo and of peanuts into Tengchowfu are important as showing the possibilities in this line in this province as well as elsewhere in the empire. Outside of a very small area around Chefoo, Tengchowfu, Chinei, and Laiyang, practically no effort has been made to extend this most important enterprise. This province now produces the following native fruits, most of which are of an inferior quality to the American product: Apples, persimmons, pears, plums, peaches, cherries, apricots, grapes, dates, quinces, and figs.

"All kinds of flower and garden seeds should be on sale here. The seeds now offered are not up to the standard, the variety is very limited, and the price asked is prohibitive, so far as the Chinese gardeners are concerned. No effort is being made to sell foreign seeds of any kind to the Chinese, who must ultimately become very large buyers. A nursery agency should be established in two or three Chinese ports from which salesmen could be sent out and goods delivered to any point.

Weakness of American Business Methods.

"A great weakness in American trade methods in China is the custom of placing the business of a large number of trade agencies in the hands of one firm handling everything, from seeds to locomotives, the business being carried on in one or two small rooms. American manufacturers should understand that China has passed the pioneer stage of doing business in the old-time country grocery style.

"American firms have combined on a machinery agency, and this combination ought to be not only instrumental in giving new life in this line of products, but it may be the possible solution of the best method of selling other American products in China. In this connection the suggestion is offered that while, as a rule, merchants should be willing to receive suggestions from a foreign agent, it is always best that the agent should be a man of tact and patience, who knows how to put himself behind rather than in front in all his dealings with Chinese traders."

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

MONTGOMERY, N. Y.—The market plant trade has already started in extensively.

CUCUMBER EXPORTER, now sent out by the raiser, Sparkes, of Worthing, England, fame, is doing good work. Shorter than the usual market type by two inches, it has the dual advantage of being ready to cut earlier, and is a prodigious cropper. American growers who are on the lookout for a high class novelty will do well to take note of this. So far we can see no one fault or defect, and apparently it enjoys our close one-joint stopping.—S.

Starting Plants on Sod.

This is an old practice, yet very little understood by many gardeners. We have had great success with sod plants. We use this method for tender subjects, such as produce a plant quickly from seed. The sod method is not so well adapted for transplanting seedlings as it is difficult to get the plants properly planted into the sod cubes, but for cantaloupes, cucumbers, lima beans and sweet corn we know of nothing better. The method is superior to pots, strawberry baskets or paper pots. The first cost is less and when we get to planting out there is no loss of time knocking out or wheeling back pots and no breakage or waste. And the plants are superior to the others

All the above named subjects love heat, hence we do not bother with spent hotbeds; we make new beds from fresh manure. Upon the manure we spread a very thin layer of old fine manure and upon this we place the inverted sod blocks, taking care that no one touches the other. This is the point. Some writers advise to run a layer of earth over the sods, but this is certainly wrong, as we do not want the roots to run from one to the other. To sow the seed we dig a small hole into each block, using a pointed knife, and cover with a pinch of screened earth. In a warm bed the plants will grow surprisingly. We keep them as dry as possible to get them sturdy.

We figure just 30 days to produce the right kind of plants and never plant out in May—there is no use. When the first real summer weather strikes us we place the plants into flats, carefully, and haul to the fields, setting them squarely on the ground and simply hoe up with a hand hoe. If well grown, they never even "wink"—they grow from the start. All vine plants, such as melons and cucumbers, should be thoroughly sprayed with Bordeaux and arsenate of lead—using 4-4 Bordeaux and three pounds lead per barrel--before they go to the field.

We used to cut the sods 4x4 inches by 2½ inches deep, but we soon found that just as good plants can be grown on smaller blocks, saving much space and labor. At present we use 3-inch blocks. Blue grass sod is best. We cut with a sharp spade using a line lengthways, and cut cross ways with a 3-inch board, and then lift the blocks with the spade directly into flats and haul to the frames. Within wheeling distance three men can make up the bed, cut and wheel the sod, place and sow the seed for 2,000 blocks in half a day, and do it on a rainy day besides.

To show what can be done with this method, we give an example. When the writer was a boy, his people were interested in a pickling cucumber enterprise. One season the month of June was so excessively wet that the land could not be prepared for the crop. When the final chance for outdoor sowing was gone, the entire crop was started on sods, as above, under sash. By the time the plants were ready the weather changed. The weeds and grass in the field were rolled and plowed under and the thrifty plants set immediately and in two days' work the acres of weeds were changed into a fine cucumber patch. The crop was the best in years. We wish to repeat that the plants must be grown on the dry side; they will stand a great deal, and just before setting out water them repeatedly until wet clear through. For this last watering, a weak solution of fresh cow manure is an advantage. If the land has a dust mulch this must be scraped away before planting so as to have the sod block get a square contact with moist earth. In warm weather such plants will get a hold in a few hours instead of days.

MARKETMAN.

Growing Irish Potatoes From Sprouts.

The British agricultural colleges have been testing the growing of potatoes from sprouts with great success. A Daily Scotsman forwarded by Vice-Consul Charles Drysdale, of Dunfermline, says that the yield and quality have both been increased and the disease-resisting powers strengthened. The newspaper clipping, describing the Scotch method, is filed for public reference with the Bureau of Manufacturers, Washington, D. C.

Prices of Indoor Fruits and Vegetables.

The prices of indoor vegetables at leading points May 1 were as follows: New York—Cucumbers, $6 to $7.50 per box; lettuce, $2 to $4 per bbl.; mushrooms, 50 to 90 cents per pound; mint, 50 to 75 cents per dozen bunches; radishes, $2.50 to $3 per 100 bunches; rhubarb, $2 to $3 per 100 bunches; tomatoes, 25 to 30 cents per pound; grapes, new imported, $1.50 per pound. Chicago—Cucumbers, $1 to $2 per dozen; head lettuce, $1.50 to $2.50 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 40 to 60 cents per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 30 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound. Kansas City—Cucumbers, $1 to $1.50 per dozen. Cincinnati—Cucumbers, $1.50 per dozen.

Poisoning By Honeysuckle.

Dr. Olav Hanssen, of Christiania, has recently published in the Nordiskt Mediciniskt Arkiv a case occurring in the practice of Dr. Engh, of Volden, in which a little boy two years old was poisoned by the flowers of Lonicera periclymenum (common honeysuckle). The child, after being in the garden playing with the flowers, became tired and drowsy and then complained of thirst. Clonic spasms and opisthotonos occurred and then diarrhœa, some of the flowers being found in the evacuations. The eyes were calm and steady but set, the face was first red and then livid, and the pulse and respiration were very rapid. When the spasms abated profuse perspiration occurred, after which the child fell asleep. He made a good recovery.

"EAT CALIFORNIA RAISINS" is the slogan of the California Raisin day committee, which is endeavoring to create a bigger demand for the local grown fruit.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June 9-11, 1909

VISITED CHICAGO.—W. Van Kleef, Jr., of W. Van Kleef & Sons, Boskoop, Holland, reports business very good; P. M. Koster of Koster & Co., Boskoop, Holland.

AUSTIN, TEX.—The Nursery and Orchard Inspection bill which recently passed the legislature has been signed by the governor and becomes immediately effective.

THE next annual meeting and exhibition of the American Peony Society will be held at Ithaca, N. Y., next month. The date has not yet been fixed on account of the backward weather.

STUDIES by the forest service show that, even if the large sequoias in California are cut down, the species is in no danger of becoming extinct as it is holding its own, and with proper care may be perpetuated.

ANN ARBOR, MICH.—Following the lead of Madison, Wis., the advocates of civic improvement have determined upon a systematic beautifying of the city and a permanent association has been formed to forward the work.

FRESNO, CALIF.—Smith & Gregory, nurserymen of Redlands, have purchased a large tract of land between this city and Lindsay, where, it is understood, a branch of the Southern Nursery will be started and trees for local orchards grown.

CITY FORESTER JACOB H. PROST proposes to make a "City Beautiful" by instructing the citizens of Chicago as to the proper kinds of trees to plant in the different sections of the city. He proposes to divide the city into zones and will ask the coöperation of the various improvement clubs in securing funds to purchase plants for the barren districts.

SAN FRANCISCO, CALIF.—C. C. Morse & Co. have purchased a piece of land near Haywards and will use it for growing nursery stock exclusively. They are erecting some buildings, putting in wells and pumps, and are also planting about 20 acres of it to nursery stock this season. The aim of the firm is to conduct almost a wholly retail nursery and will grow its own stock, as this is needed a little better than the ordinary nursery stock now offered. The new tract is on some of the finest land in the state and also some of the most expensive, and the firm has great hopes of growing nursery stock that will be adapted to the most critical trade on the coast.

Variegated Rose.

W. Van Kleef, Jr., representing W. Van Kleef & Sons, Boskoop, Holland, is making his annual tour of the American trade and reports business very good. Mr. Van Kleef says his firm will shortly disseminate a new golden variegated hybrid tea rose, as yet unnamed. The flowers, after the style of The Bride, are pure white and produce very freely.

Flowering Trees and Shrubs During April.

NOTES FROM ROCHESTER, N. Y.

The past winter has been comparatively mild. The temperature at no time went lower than one degree below zero. Judging by present appearances trees and shrubs generally seem to have wintered well. The months of March and April, though, have been remarkably raw and cold, with strong and searing cold winds, and it has been during that time more trying on evergreens than at any other time during the winter.

The Japanese witch hazel (Hamamelis Japonica arborea) opened its first flowers on February 5 and it was in good bloom February 27, continuing in flower until about April 1. The blossoms, with the rich primrose yellow petals, and deep red calyx, look remarkably showy. It is absolutely hardy, and is one of those things that should be extensively planted.

The silver maple was in full flower about April 5. The reddish pistillate flowers are quite attractive. It is not as showy in bloom, however, as the scarlet maple, which was in full bloom about April 15.

The charming Alpine heath (Erica carnea) was in flower April 6 and is at the date of writing (April 28) in fine showy condition. The pale red, one-sided flower racemes are very attractive. The white flowered form (Erica carnea alba), which is known sometimes under the name of E. herbacea, blooms at the same time. It is more compact in its habit of growth than the type, and the white flowers are charmingly pretty.

The mezereon (Daphne Mezereum) was in flower April 6. The pale red flowers which cling closely to the naked branches, are pleasingly fragrant. A variety with pure white blossoms, D. Mezereum alba, and one with deep red flowers, D. Mezereum rubra, are choice forms. This handsome garden shrub is showing a tendency to become extensively naturalized in this country. An important colony has established itself in a damp, shady wood in Seneca Park and hundreds of it are growing vigorously in a wild state at the Dufferin islands, Victoria park, Niagara Falls, Ont.

The rabbit berry (Shepherdia argentea) was displaying its yellow blossoms on April 7. The staminate individual is quite attractive in flower. This shrub seems to have a constitutional tendency to be weak at the collar. About the time it attains maturity it seems unable to support itself and will fall over in a misshapen wreck. I do not know of any other shrub or tree that shows this specific weakness.

The American, European and Constantinople hazels were in full flower about April 7. The Constantinople hazel (Corylus colurna) has long, drooping, dull brownish yellow catkins that present a graceful effect on large trees. The Japanese and European alders were in full flower on April 8.

Cornus mascula opened its first flowers on April 13 and is in good bloom now, April 28. This is very attractive and cheerful in bloom and is a first-rate all-round shrub or small tree. C. officinalis, from Japan, flowers at the same time as C. mascula and very much resembles it. In C. mascula the yellow flower clusters are about the same length as the involucral scales, but in C. officinalis they are about twice as long, and consequently the flowers of the Japanese species are perhaps a little more showy.

Standish's honeysuckle (Lonicera Standishi) showed a few open flowers on April 17 and was in full bloom April 25. The whitish blossoms are deliciously fragrant. L. fragrantissima was partly in flower April 24. The whitish flowers are pleasingly fragrant, but the odor is not as perceptible as in L. Standishi.

Rhododendron Dahurica came into bloom on April 22. The pale, rose-colored flowers are quite showy. It is quite hardy here and one good sized plant has wintered well for 16 years.

The leatherwood (Dirca palustris) was displaying its yellow blossoms on April 23 and the spice bush (Lindera benzoin) commenced to open its yellow blossoms April 26.

The star magnolia (M. stellata) commenced to unfold its handsome white flowers on April 24. At present appearances the flowering of this showy spring shrub will be a failure. On account of the cold, searing winds the flowers do not open, but remain in an abortive condition.

The goat willow (Salix caprea) was displaying its handsome yellow male catkins April 26. This is perhaps one of the handsomest of the willows in bloom. A wild peach from the mountains of Pekin, China, received from the Arnold Arboretum, was in full bloom April 26. To cap the climax, at the date of writing the ground is covered with six inches of snow and it looks like mid-winter.

JOHN DUNBAR.

Test of Outdoor Roses.

In the spring of 1907, a collection of about 130 varieties of roses were planted in the garden at the experimental farm at Guelph, Ont., consisting of bush and climbing varieties, including hybrid perpetuals, hybrid teas, polyanthas and teas. They were given good cultivation and made a fair growth the first season. Various methods were tried of protecting the bushes for the winter. Some of the bush roses were banked with earth for a foot or so about the canes, some were banked with manure only, and some with leaves and strawy manure with board cover. The climbing roses were laid close to the ground and covered with four or five inches of strawy manure. So far as a comparison of results was concerned, but little difference was noticed in the different methods.

Bush Roses.—All of these that came through the winter satisfactorily flowered during the summer of 1908. The hybrid teas, such as Meteor, Richmond, and other tender varieties, were many of them badly winter killed, even where well protected. Some of the more hardy hybrid perpetual varieties budded or grafted on the briar or manetti stock were also winter killed or badly weakened. Bushes on their own roots, while probably not making quite as strong growth as those budded or grafted, came through the winter almost without exception in very good condition. This goes to show that hybrid tea roses, of any variety, are not so desirable for planting outside in this locality or in northern sections of Ontario.

Climbing Roses.—There were 20 varieties of climbing roses in the collection, most of which wintered fairly well with the protection given. Maddalena Scalarandis was the only variety killed entirely, although some of

the polyantha and Soupert type of climbers were partially winter killed. Among the most promising newer varieties in the collection are May Queen, Pearl Queen, Wm. C. Egan, and Queen Alexandra. The last named is a beautiful, free blooming, attractive rose, rivalling the popular Crimson Rambler in the size of its panicles of flowers, the color being a pretty pale pink. Further tests must be made, however, before any very definite results can be published.

Tea, Hybrid Tea and Polyantha Roses.—Very few of these came through the winter satisfactorily, notwithstanding the careful protection given them. Of those that survived, Hermosa, Baby Rambler, Killarney, Clothilde Soupert, Queen's Scarlet, and Gen. de Tartas came out the best. Hermosa proved to be the hardiest of the lot. The bushes of this variety bloomed profusely the greater part of the summer.

GOOD ROSES FOR AN AMATEUR'S GARDEN.

From the data at hand the report recommends the following as a few of the most desirable hardy roses for the amateur's garden:

Hybrid Perpetual Bush Roses.

Abel Carriere, crimson
Anna de Diesbach, pink.
Baron de Bonstetten, very dark crimson.
Countess of Roseberry, shell pink.
Dinsmore, dark crimson.
Eugene Furst, velvety crimson maroon.
Earl of Dufferin, velvety crimson.
Exposition of Brussels, dark purple crimson.
Francois Levet, rosy crimson.
Frau Karl Druschki, white.
General Jacqueminot, scarlet crimson.
Jean Liabaud, deep crimson.
John Hopper, rosy pink.
Louis Van Houtte, dark cherry red.
Marshal P. Wilder, dark red.
Oakmont, soft pink.
Mrs. Sharman Crawford, rosy pink.
Prince Camille de Rohan, crimson maroon.
Pæonia, bright crimson.
Soleil d'Or, yellow.
Ulrich-Brunner, crimson scarlet.

Moss Roses.

Blanche Moreau, white.
Countess de Murinais, blush white.
Crimson Globe, crimson.
Princess Adelaide, pale pink.
Crested Moss, pink, heavily mossed.

Rugosa Roses.

Agnes Emily Carman, crimson, semi-double.
New Century, pale flesh pink, double.
Sir Thos. Lipton, white, double.
Rosa Rugosa, crimson, single.
Rosa Rugosa Alba, white, single.

Climbing Roses.

Crimson Rambler, crimson, double.
Dorothy Perkins, pale pink.
Queen Alexandra, pale pink, single.
May Queen, pink, double.
Pearl Queen, pale pink, double.
Wm. C. Egan, pale pink, double.

Forest Planting in Vermont.

Interest in forest planting has increased rapidly in Vermont since the establishment of the state nursery two years ago. In spite of the rapid extension of the nursery the supply of stock was so largely taken up last year by land owners of the state that it was necessary to import seedlings from Germany this year. Experience with this imported material in other parts of New England indicates that it is fully as satisfactory as that grown here.

Now that seedlings have been brought within the reach of all prospective planters the only hindrance to extensive reforestation is a lack of knowledge regarding the methods and cost of planting, and the profits to be derived therefrom. In order to overcome this difficulty State Forester Hawes has arranged to give a two days' course in forest planting at the University of Vermont at Burlington, April 28 and 29. This short course will comprise lectures and actual field work in all the operations of raising trees from seed, and setting out the nursery stock on the land. It is entirely free to all and no application is necessary. Applications for nursery stock or inquiries regarding the planting course should be addressed to A. F. Hawes, State Forester, Burlington, Vt.

BOX TREES.

We have just received a carload of fine, shapely, compact trees in the following sizes:

Pyramidal Shaped

Height.	Each.	Pair	Height.	Each.	Pair
2 ft.	$1 50	$2 75	3½ ft.	$3 00	$ 5 50
2½ ft.	2 00	3 75	4 ft.	4 00	7 00
3 ft.	2 50	4 50	5 ft.	7 00	13 00

Standard or Tree Shaped

Stem.	Crown.	Each.	Pair.	Stem.	Crown.	Each.	Pair.
18-22 in.	20-22 in.	$3 00	$5 50	18-22 in.	30-32 in.	$5 50	$10 00
22-24 in.	22-24 in.	4 50	8 00	22-24 in.	32-34 in.	7 00	12 50

Prices include trees planted in green tubs. If wanted out of tubs, roots done up in burlap, we will allow 10 per cent discount.

Bush Shaped

Fine, bushy plants, 15-18 in. high.....Each, 40c! per doz., $4 00

The Lesser Apple Leaf-Folder.

During the past two years nurserymen in various parts of the state have reported considerable damage from an insect which is comparatively new in Iowa, the apple leaf-folder. The entomological section of the experiment station at once began to investigate the life history of this insect, and to experiment with different methods of combating it, in order to discover, if possible, some means by which it might be held in check.

The results of the experiments indicate that arsenate of lead is the most effective remedy. Directions for spraying, together with a complete life history of the insect, have just been published in bulletin No. 102, "The Lesser Apple Leaf-Folder." Copies of this bulletin may be obtained free by applying to Director C. F. Curtiss, Iowa Experiment Station, Ames, Ia.

ANNOUNCEMENT

We have arranged with **MESSRS. PATTEN & CO., Tewksbury, Mass.,** to grow part of the stock of our

New White Carnation Shasta

and to assist us in disseminating it next season, 1910. Orders entrusted to them will receive the same careful attention as those sent to us. We have 12,000 plants between us

Shasta scored 89 points at the A. C. S. Convention, Jan. 27-28, 1909, and was generally conceded to be the best looking new variety in the whole show.

It Is a Money Maker for both Grower and Dealer.

Orders are being booked by Messrs. Patten and ourselves at **$12.00** per 100; **$100.00** per 1000. Dealers will please write for discounts.

BAUR & SMITH, 38th St. and Senate Ave., Indianapolis, Ind.

CLARKSVILLE, TENN.—M. E. Heitt was the victim of an outrage Sunday, April 18. While he and his family were sitting on the front porch about 9 p. m. some one fired three shots from the steamer Buttorff, which was proceeding up the river. The shots crashed into Mr. Heitt's greenhouse, standing within a few feet of his dwelling. The weapon used was a Winchester rifle.

THE BELFAST CHRYSANTHEMUM

The Queen of Winter.

The most profitable 'mum in sight for Christmas and later. Easily sells for one third more than Nonin or any other variety. Size, color and keeping qualities is what does it. Can be had all through the winter by propagating and planting late. They are fine to follow early 'mums: of the very **largest size.** Color, light-pink to cream-white. Perfectly healthy and easy to grow. A seedling of W. H. Chadwick and Western King.

Extra large cuttings from soil or sand, **$2.50 per 100; $18.00 per 1000.** Prepaid.

WILLIS E. HAMILTON, Belfast, Me.

Geraniums, Dahlias and Bedding Plants

We have one of the most complete collections of Geraniums in the country, containing every color and type found in the Geraniums, at $2.00 and $3.00 per 100. Every one of our 70 Standard Varieties are bread and butter winners, and among our 34 New Varieties of Special Merit are some that are going to fix the standard in the future. Every one is a gem, not high in price, only $4.00 and $6.00 per 100.

Our Novelties should, coming as they do from the leading introducers of the world, represent the highest development of Geraniums at the present time. A collection of 100 varieties, our selection of 1907 and 1908 Novelties, will be sent for $10.00.

Special offer of 1000 good strong plants, from 2-inch pots, our selection of 20 distinct varieties from among our Standard and Newer Varieties, for $15.00, cash. From 3-inch pots, $3.00 per 100; $25.00 per 1000.

Cannas Strong plants from 3-inch pots, J. D. Eisele, Egandale, Alphonse Bouvier, Mme. Crozy and Florence Vaughan, $4.00 per 100; Jean Tissett, President Meyers, Louisiana, Pennsylvania, $5.00 per 100.

Dahlias We have one of the finest collections in the country of good distinct commercial varieties, at $2.00 per 100 and up for plants ready for shipment. Then we have Jack Rose, Virginia Maule, Big Chief, Rose Pink Century, Fringed Twentieth Century, Rebecca Mayhew etc., at 50c each; $5.00 per doz.; $35.00 per 100. We will send 1000 in 20 good distinct cut flower sorts, our selection, for $18.50.

See issue of April 24th or our wholesale catalogue for complete list of bedding plants.

Everybody Talks About It!

LIKE THE BEE

A Prosperous Florist Is Never Idle.

☞ We have plants to sell. So have 100 or 1000 others. ☜ But we have quality and prices that few can offer.

☞ An immense stock of **Bedding Plants** is now ready. Every hole and corner full for immediate shipment.

	Per 100
Geraniums, 4-in., S. A. Nutt, dark crimson, John Doyle, Mme. Thibaut, pink, and other varieties	$7 00
Scarlet Sage (or Salvia), the true Clara Bedman or Bonfire. Ours is the true medium tall genuine variety; deep red, brilliant flowers; a constant bloomer so much admired in the capital cities of Europe and America. The seeds of this famous variety were gathered by myself in Zurich, Switzerland, the home of Salvia. Price 4-in. pots.	8 00
Ageratum, best blue, dwarf varieties, 4-in.	$6 00
3-in. pots	3 00
Heliotrope, best blue, dwarf varieties, 4-in.	7 00
Begonia Erfordi, pink variety, 4-in.	8 00
Begonia Vernon, newest strain, the so well known dark variety, of our own importation. Seeds selected from the best specimen plants by myself during my trip in Switzerland and France. On that account these varieties thrive well in the hottest climate, exposed direct to the heat of the sun in July and August; a constant bloomer; therefore it is very valuable as a bedder, and in many instances takes the place of Geraniums, etc. 4-in. pots	8 00
Begonia Flambeau, or Octavie, valuable for window boxes and vases; their fine waxy foliage gives them a beautiful appearance. 5¼-in. pots	2 00 per doz.
4-in. pots	1 00 per doz.
Fuchsias, in bud, 4-in	6 00
Petunias, double, assorted, 4-in.	7 00
Lantanas, assorted, 4-in.	7 00
Nasturtiums, assorted, 4-in.	6 00
Stock, German Ten Week	7 00
Vinca Variegata (Periwinkle), 4 in.	12 00
Cobea Scandens, fine blue, bell-shaped flowers; climbing vine, grows 30 to 50 feet in one summer; blooms far into November; nicely staked up, 4-in. pots	8 00

SMALL PLANTS.

Petunias, California Giant, 3 in. pots	4 00
" Inimitable (dwarf), 2½-in.	3 00
Verbenas, assorted, in bud, 2½-in.	3 00
Coleus, Verschaffeltii, Golden Bedder and Queen Victoria, 2½-in. pots	3 00
Coleus, fancy leaved, 2½-in.	4 00
Tagetes, or French Marigold 3-in.	3 00
Centaurea Gymnocarpa or Dusty Miller 2½-in.	3 00
Parlor or **German Ivy,** 2½ in.	3 00

THE ARAUCARIAS.

We are the largest importers of these so well known beautiful evergreen decorative plants, **Araucaria Robusta Compacta, Glauca and Excelsa.** ☞ Florists, bear in mind there is no garden, lawn or porch, etc., in the summer that is complete without the Araucarias; therefore if you want to make money, ☜ Recommend your customers to buy an Araucaria. Any variety will do to introduce this so valuable plant to your customer friends. ☞ Look! We make you special prices:

Araucaria Robusta Compacta. Specimen plants, 7 to 8 in. pots, 4 to 5 years old, 3-4-5 tiers, 20-25-30 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-7-8 in. pots, 4-5 year old, 4-5-6 tiers, 20-25-30-32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3-4-5 year old, 4-5-6-7 tiers, 6-in. pots, 20-25 30-35 in. high 75c, $1.00, $1.25, $1.50 each. Can meet all applications.

Ficus Elastica, or Rubbers, 5¼-5½-6 in. pots, 25c to 30c.

Kentia Forsteriana and **Belmoreana,** 5½-in. pots, 50c, 60c and 75c.

O, what a sight! **Moonvine, Moonvine, Moonvine,** the genuine pure white **Moonvine.** Economy. ☞ Look! Life! Life! Life! What is a life? Your fence is a life: your porch is a life, a mass of flowers: your house is a life; your barn is a life: your garden wall is a life! O, life and joy everywhere! What smells so fine? Flowers and greens everywhere; every spot of our home is a life!

☞ Meine hauschen steht in grunen. ☜

☞ I am the Moonvine King of America. ☜

Grower and shipper of the so well known Ipomœa Noctiflora. For the past twenty years we controlled the American market of this beautiful climbing vine, which grows 30-40-50 feet high covering every spot of your fence home, barn, etc., with fragrant, beautiful, pure white waxy flowers, as big as a saucer. 25,000 plants are shipped every spring into every part of America. 4-in. pots, staked up nicely, $12 00 per 100; 3-in. pots $8.00 per 100; 2½-in. pots, $5.00 per 100.

Please state if in or out of pots.

All goods must travel at purchaser's risk only. Cash with order, please.

GODFREY ASCHMANN, 1012 W. Ontario St., Philadelphia. Pa.

Importer, Wholesale Grower and Shipper of Pot Plants.

THE ROSE.—Its cultivation, varieties, etc. (H. B. Ellwanger).—A complete guide of the cultivation of the rose, together with the classification of all the leading varieties. $1.25.

AMERICAN FLORIST CO. 324 Dearborn St., Chicago.

If You Do Not Find What You Need in Our Ready Reference Department, Write Us About It.

Nashville.

Spring festival week, while not directly responsible, witnessed a brisk trade along all lines, all retailers reporting a busy week and fine trade. Spring flowers, snowballs, syringa, spirea, iris and lily of the valley have been abundant. These have been brought in from country gardens and placed on sale with confectioners and even in dry goods stores. Prices were extremely reasonable, lily of the valley selling at 40 and 50 cents per 100. They are unusually fine this season for outdoor stock, and very fragrant. These garden flowers have furnished the larger part of the spring social affairs. Peonies are beginning to come; the deep crimson, rivaling an American Beauty rose in color, is already in bloom. In a little while all peonies will be abundant.

NOTES.

L. Haury & Son have a place very near the city containing five acres, with greenhouses of 20,000 square feet. They have grown quantities of lettuce this season and find a ready sale for all they market. They also grow radishes, cucumbers, cauliflower and other vegetables. They expect to erect another range of houses this season, doubling their capacity and will grow more flowers.

The usual Saturday market of flowers was excellent, particularly in bedding plants. McIntyre Bros., L. Haury & Son, Arnold Schmidt and J. T. Dawson were some of those noted present last Saturday. The day was cool, and quite a number of small growers were not represented, but those who were there were doing a good business in plants.

The estate of Jacques Barat, who died some months ago, is still unsettled, and Leon Geny, administrator, has filed another bill to readjust and settle the claims of the numerous heirs who were discovered abundantly.

Geny Bros. have been showing especially fine carnations and roses, also many Easter lilies still on hand. They have had an unusual run of funeral work.

The Joy Floral Co. has had splendid Killarney roses and Kaiserin is beginning to come in very fine. Business here has been excellent.

M. C. D.

Galveston, Tex.

A $50,000 company for growing cut flowers, palms and all tropical trees and plants on a large scale is being organized here. Although the names of the promoters of the enterprise are withheld from publication, the men behind the scheme are among the most successful men in that trade in this state, and are enterprising business men as well. The scheme is to secure a large tract of land on the island and keep the grounds in a high state of cultivation, growing the hardier trees, flowers and plants in the open, the more delicate ones being taken care of in greenhouses. Several acres will be planted in palm trees alone, and as the young trees become marketable they will be shipped away.

The promoters of the company are working on the plan that there is nothing of the nature this side of St. Louis and instead of florists in Texas and adjoining states sending north to get their cut flowers they can be supplied in profusion here, and reach the customer much quicker and in fresher shape. Cut flowers sent here from St. Louis lose a great deal of their beauty and fragrance during the 48 hours necessary.—Galveston Tribune.

GRAND RAPIDS, MICH.—The Grand Rapids Greenhouse Co. has disposed of the last of its stock of 2,000 Asparagus plumosus, the sales being scattered over almost every state in the Union.

STOCK PLENTIFUL.

Trade conditions remain about the same as last report. Stock is coming along in vast quantities and it takes some tall hustling to move it. One redeeming feature is the good call for sweet peas, daisies, snapdragons and outdoor daffodils. These are practically cleaned up every morning. Roses and carnations are a glut. Green goods are becoming scarcer every day and it is a difficult matter to fill an order for 100 strings of smilax. The demand of course is on the increase for this line of goods. One day last week the supply of fern leaves had reached such a low ebb that it was a difficult matter to get them in any of the wholesale houses. The next day, however, there was a bountiful supply, there being one express wagon full of boxes containing ferns distributed among the different houses and everybody was happy.

NOTES.

Henry Schwarz, Norwood, reports business first class and states that he was very busy for the spring carnival celebrating the twenty-first anniversary of this thriving town. Henry is trying to find out who made the bouquet that was presented to a friend of his in the parade that had a bunch of lemons attached to the stem.

Charles McRae of Hardesty & Co. spent a few days last week at Maysville, Ky., doing the decorations for the wedding of Lieutenant-Governor Cox's daughter. Charley said he encountered some genuine Kentucky hospitality and would not mind working for these people the rest of his life.

Will Murphy and Tom Windram have returned from Mr. Windram's asparagus farm down in Florida. Will Murphy said it was very hot down there, the thermometer registering 86° in the shade, the evenings, however, being delightfully cool; but he could not get used to the mosquitoes.

Ernst Mack of Price Hill has been sending some exceptionally fine Lilium longiflorum blooms to this market, for which he received top prices. His present crop is about over, but his son George claims he will have another fine lot for Memorial day.

E. George Tromey says business has been quiet the past week and he is glad of it, as it will give him a chance to catch up with some of his work that had to be neglected during the rush, which has been very prevalent all winter.

Weiland & Olinger's American Beauty roses are again in crop and they now receive two shipments a day from their New Castle, Ind., greenhouses.

E. G. Gillette, who is holding down the lid owing to the absence of his partner, Clarence Ohner, is handling a nice lot of American Beauty roses.

A. Sunderbruch's Sons had the bulk of the work for the funeral of Captain King of King's Mills. Some very classy designing was noticed.

The J. M. McCulloughs Sons Co. is handling some nice snapdragon and sweet peas grown by Tom Windram of Cold Springs, Ky.

Barr's windows were nicely decorated last week, one being in lilac and Lilium longiflorum, the other in Narcissus poeticus.

S.

MONTICELLO, IND.—Fred Roberts is building a greenhouse alongside his residence and proposes to go into the business rather extensively.

PORTLAND, ORE.—The state building at the Seattle fair is to be decorated with Portland roses on the opening day, June 1, and on all other special occasions. Growers will be given notice when to ship by the Oregon state commission, under whose auspices the exhibition will be held.

PORTLAND, ORE.—At a recent meeting of the Rose Society the various committees on decoration, classification, awards, etc., were appointed and the dates for the annual rose festival fixed for Tuesday and Wednesday, June 8-9. The display will be confined to roses grown in Multnomah county.

WASHINGTON, D. C.—Vine day was observed in the public schools of this city, April 26, the school children planting slips and seeds of vines of many varieties that are to cover the walls of the schoolhouses and fences and hide their former bareness and unsightliness.

Milwaukee.

STOCK IN SHORTER SUPPLY.

The weather man has handed us an assortment of weather this week that is very difficult to beat for nastiness, and small wonder, therefore, that stock of all kinds has shortened up considerably with a rise in price. There are still sufficient roses for all needs, but carnations were rather short; especially was this true on Saturday. Sweet peas are now at their prime, with fine call for the extra fine stock. Violets are almost past and it is well, as the demand for them has dropped down to almost nothing. There is a fine call for American Beauty roses, which are coming in fine condition. Lily of the valley is scarce, but will soon be in sufficient supply. Green goods are plentiful, excepting smilax.

NOTES.

Holton & Hunkel Co. is receiving fine shipments of American Beauty roses from its Brown Deer greenhouses, also very choice sweet peas.

Mueller & Schroeder are now cutting some very fine snapdragon, for which there is a good call.

Fred Schmeling has been in bed for two weeks suffering with rheumatism.

VAUGHAN'S SEED STORE, Chicago or New York.

Albany, N. Y.

Wm. C. Kurth and Eli D. Burke, formerly in the employ of H. G. Eyres, have bought the retail store of Rheinhold W. Zobel, 518 Broadway, and took hold May 1. They will conduct business under the style of "The Broadway Florists." Both are experienced in the retail business and their friends are hopeful of success. Burke had been in the employ of Mr. Eyres since the latter started into business about 24 years ago. Kurth had been with the same employer for 19 years. The firm has at present no greenhouses. Mr. Zobel has also sold his greenhouses at Garbrance lane and the Troy road to Fred Keller, Jr., of New York, son of the well-known florist. Mr. Keller will assume charge of the Zobel plant on May 15. Mr. and Mrs. Zobel about the end of May will leave this country for Germany where they will spend some time and may conclude to remain permanently. They have been in this country about 25 years and are well known to the trade in Chattanoga, Tenn., and in Newark, N. J., and vicinity, where they were in business before coming here three years ago.

R. D.

ATHENS, O.—The contract for the new greenhouse on the state hospital grounds has been let and work will begin at once. The building is to be 28x150 feet.

"Natural Guano" PULVERIZED SHEEP MANURE

Guaranteed pure and unadulterated, thoroughly sterilized and immediately available. Used universally as a quick acting natural plant food.

Write us for prices and particulars.

Natural Guano Company, Aurora, Ill.

Indianapolis.

PRICES HIGHER.

After a spell of beautiful spring weather, an abundance of cut flowers of all kinds and no demand to speak of at the beginning of May, conditions changed suddenly to February weather, unusually good demand and shortage of stock, and prices accordingly took an upward turn. Notwithstanding the wintry weather the market men reported very satisfactory sales of all kinds of pot plants. The severe wind and hailstorms that swept this state fortunately did not do any serious damage in this county.

NOTES.

H. W. Rieman finds it necessary to increase his store force; his trade is growing even faster than the younger generation of Riemans.

Herbert Heller's numerous friends are grieved to learn that he is again under the weather. We all hope for his speedy recovery.

John Heidenreich has a fine crop of Kaiserin roses coming on and some benches of schizanthus are a novelty for this city.

A placard in the show window of Benson, the Florist, reads: "We give the earth with every plant."

John Rieman's daughter, who was seriously ill last winter, is improving rapidly.

Martin Brandlein has improved his store by adding a well-arranged flower cellar.

Ed. Allender, well known to the local trade, is again with F. R. Conway.

John Elsner's daughter, Elizabeth, was married to Frank Stickhan.

Anthony Wiegand and wife will spend the summer in Europe. J.

Boilers, Tubes, Flues, Etc.,

at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter, be sure and write for our low estimate on your requirements before placing your order. We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.

Estimates Furnished Free, Our Greenhouse Engineer will furnish you with any estimate on anything you may require in the Boiler, Heating Material or Building line. **Write for price list on Iron Pipe.**

7-500 horse power Babcock & Wilcox water tube boilers with B. & W. chain grates, about 5 years old: 160 lbs pressure. Also complete coal and ash handling apparatus capable of of taking care of these boilers.
4-250 horse power **Heibe** water tube boilers with Oliver patent grates; 100 lbs. pressure.

1-125 horse power **Morrison** corrugated furnace, internally fired boiler, 125 lbs. pressure.
1-48x21 locomotive fire box boiler. 60 horse power, 100 lbs. pressure.
24-Horizontal tubular boilers, triple riveted: ½-in. shell, ⅝ heads; with Murphy Furnace and stokers on all boilers: also coal and ash handling apparatus for these boilers.

Greenhouse Boilers!

A complete line of locomotive, fire box boilers, Kroeschell Greenhouse boilers, Return tubular boilers, Cast Iron Sectional boilers, etc., some are rebuilt, some brand new, but all are in first-class condition for further service.

1—150 horse power fire box boiler.

Good for 60 lbs. pressure. Free from patches, bulges or blisters. Complete with all fittings.

We want to move this boiler quick and quote a special price of..... **$500.**

Boiler Flues! Fitted with special thread and couplings. Can be used same as threaded pipe and fitted with calked joint greenhouse fittings at the end of the run. These flues have the same strength as wrought iron pipe and are offered at about half the price. Any size desired.

6-72x20 horizontal tubular boilers, quadruple riveted; 50 4½-in. tubes; 110 lbs. pressure.
4-72x18 Horizontal tubular boilers, 100 lbs. pressure.
4-72x16 Horizontal tubular boilers, 95 lbs. pressure.
2-66x16 Horizontal tubular boilers, triple riveted, **Butt** strapped, 140 lbs. pressure.

8-60x16 Horizontal tubular boilers, 100 lbs. pressure.
2-54x16 Horizontal tubular boilers, triple riveted, butt strapped, 125 lbs. pressure.
2-48x14 Horizontal return tubular boilers, butt strapped, double riveted; 125 lbs. pressure.

HOT BED SASH at EXTRAORDINARY LOW PRICES.

BOILER TUBES. 20 carloads of 4-in. Boiler tubes in perfect condition. They are just the thing for heating purposes or for retubing boilers. Other sizes can be furnished at specially low prices. Write for complete list.
5 carloads of Boiler tubes, 2 to 6 inches inclusive, also tubes with threaded ends. Get our prices on pipe, valves and fittings; we can save you money. Greenhouse fittings at half price.

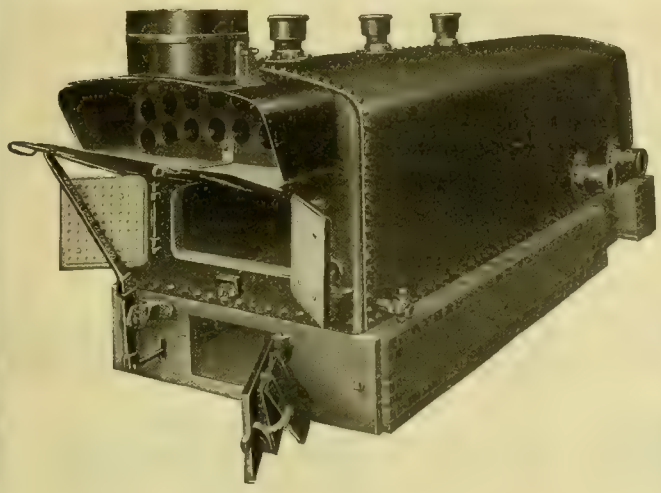
JOHNSTON HEATING CO., 138 E. 31st St., NEW YORK.

Kroeschell Boiler

Installed to heat over 6,000,000 (six million) sq. ft. of glass during the past three years.



Expressions From The Men Who Know:

THE BOILER AND PIPING SYSTEM, I CAN SAY, IS PERFECT IN EVERY WAY. With the Generator **I can keep low temperatures,** or can get the pipes **so hot we cannot touch them.** In less than twenty minutes all houses are thoroughly and equally heated, no matter how many coils are turned on, and all this is due to the Generator, which costs only $35.00

I feel that **no hot water system should be without a Kroeschell Generator.** Yours truly,

RUDOLPH NAGEL, Lancaster, Pa.

We had no trouble whatever in keeping the required temperature during the recent cold spell **with thermometer at 12 degrees below zero.**

We are glad of the opportunity to **recommend your Generator, Boiler** and **piping plans** to our fellow florists, knowing that when placed as directed they **will give perfect satisfaction. We did our own piping,** and none of us had ever had any experience in that line before. Hoping this will be of some benefit to you, and thanking you for past kindness, we remain,

Very truly yours

VENTILATING APPARATUS.

Newark, N. J.

The parks are now fine in their spring dress. Branch Brook park heads the list. This always beautiful park will present a wonderful improvement this year. The floral display is one with which to conjure. There were planted this spring nine beds or groups of pansies, in all just 22,000. The beds are distributed through the park and make a splendid showing. Last fall 60,000 bulbs were planted. Of these 10,000 were daffodils, 8,000 hyacinths and 42,000 tulips. Then there are all kinds of beautiful shrubs which bloom annually about this time of the year. These bushes include the golden bell, the bridal wreath and the Japanese quince.

At Waverly park there is a bed of 4,000 pansies. Last fall 15,000 bulbs were planted, of which 5,000 are daffodils and 10,000 are tulips. In East Side park no pansies were planted this spring. Last fall 10,500 bulbs were planted, of which 500 are daffodils and 10,000 tulips. In Orange park 20,000 bulbs were planted last fall. All are tulips. In all the parks the full complement of employes is at work mowing lawns and getting into shape.

What Are You Watching?

The bunghole or the spigot? If anyone should point out to you that while you are watching so carefully that half pint coming out of the spigot—three gallons were pouring out of the bunghole—you would stop the leak at once, that's sure.

Now, tell us where is the difference in buying an all-cypress house with a price that sounds cheap, when in a year or two you begin to put your profits into repairs instead of in the bank? There's no house built that will grow better plants than our Flat Iron Rafter House, or that is as downright cheap in the end. We want you to take this argument up by mail—we will answer your letter that very day.

26th and Western Ave., CHICAGO.

San Francisco.

TRADE SLOW.

Ever since Easter business has been exceedingly slow, an occasional funeral order being about all we have to depend on. As flowers of every kind are plentiful, prices are correspondingly low. Carnations especially have been brought in lately in such quantities that they can be bought at any price. Lilies also are quite plentiful and cheap. There are some very fine tulips to be seen around the different stores, mostly Darwin and Gesneriana. Chas. Stappenbeck is getting (every day) large shipments of these in most exquisite colors with long stems and fine large flowers. Sweet peas and Spanish iris, which are coming in a little more freely, are finding a ready sale at fair prices. H. Goertzhain has a nice lot of Gladiolus The Bride in bloom, and Ferrari Bros. are bringing in that pretty variety Blushing Bride. Lily of the valley is in fair supply and always disposed of.

NOTES.

J. Fotheringham, of the F. R. Pierson Co., and G. M. Reburn, of Vaughan's Seed Store, have been in town the last week. Both are reporting business as very satisfactory.

D. Garibardi, Colma, is building two new greenhouses, each 25x150 feet, in which he intends to grow Asparagus plumosus and adiantum for this market.

J. C. Vaughan, Chicago, through his representative, G. M. Reburn, treated several of his local friends to a most enjoyable banquet the other night.

H. Kessel, of 448 Thirty-second avenue, proposes to rent his place next fall, but first intends to erect several more greenhouses. P.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved, as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the every day florist is called upon to perform

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue, as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR CUT FLOWER GROWERS.

Feeding Peonies.

Although it is much too late to make up for deficiencies in soil and culture, if these have been allowed to exist, much may be done by careful cultivation of the soil and feeding to insure substantial flowers. If the surface soil is beaten down hard, let this be broken up with forks or hoes, admitting air and sun. Avoid the crowns of the plants and see that they are not injured. At the second or third hoeing the soil may be banked a little to the rows, leaving a depression around the plants to facilitate the application of manure and water and to insure the roots the benefit of the warm spring rains. A little of a good quick-acting fertilizer scattered about the plants will also be of great benefit, and this should be lightly stirred in with the hoe, before a rain if possible.

Hardy Annuals.

If these are neglected now they may as well be thrown away, for they will be useless. They must be kept growing from the start. As the sweet peas develop see that some support is given before they fall over or they will be checked. The material used for support depends upon circumstances, and there are worse methods practiced than the old plan of using brushwood. Keep the hoe going between the rows, and if there is any doubt about the condition of the soil, give a good sprinkling of superphosphate along each side of the rows. Asters should by now be in their flowering quarters. If the soil is good and well prepared, one or two waterings will settle the plants in and start them going, but if convenient to the water supply a good washing from the hose two or three times a week in fine weather is a great help. Plant out Iceland and other poppies. These are not strictly annuals but are more profitably grown that way. We usually plant these in small patches of half a dozen or so lifted direct from the seed flats. It is too much trouble to single them and no advantage. Give ten-week stocks an open position if possible but not a wind-swept one. Three plants in a patch at one foot apart each way is a good planting scheme for cutting purposes. Where the sowings of godetias, eschscholtzias, cornflowers, African marigolds and similar plants are coming up, thin them early to prevent their running up to flower weakly and place a little brush in the rows or patches. This will protect the seedlings a little from cold winds and form a support to the stems later. The annual chrysanthemums are a most useful class, and it is not too late to sow. C. segetum, the bright yellow single variety, grows anywhere and anyhow, but the tricolor varieties need a little more care, though quite easy to grow. Sow thinly where they are to flower and thin the plants in the rows to about four inches apart. C. inodorum plenissimum (matricaria) is a fine thing for cutting, the pretty white flower heads being always welcome in July and August. At first sight there may not appear to be much money in these annuals for the florist, but for the man who has his own store and retails the produce of his garden and greenhouse they form a most welcome variety in the summer flowers if properly grown. Neglected they are useless.

Dahlias.

Regarding the date of planting out dahlias every grower has to a great extent to work out his own salvation. There are localities where there is little frost to be feared after the middle of May, while in others there are annually killing frosts some time between May 23 and May 30, and any gain in early planting in such locations is more than counterbalanced by the damage done. In any uncertain places if early planting is carried out it is imperative that protecting material be placed over the plants every night whether frost seems imminent or not; it is the only safe way. When this is impossible, owing to the number planted, then keep the dahlias under cover until June. When planting, place a strong stake to each plant and tie very loosely to admit of the plants sinking in the soil without being strung up. Spread lime and soot in equal proportions around the plants liberally, as

this material is distasteful to slugs, which are very voracious at this time. Four feet apart is quite close enough for the cactus, show and fancy varieties, three feet for the pompons.

English Wallflowers.

Though by no means a staple article, the English wallflowers are a very welcome addition to the cut flower stock in early spring, their fragrance and lasting qualities recommending them. Seedsmen have not made the progress with this flower that they have with some others and the varieties sometimes sold are by no means the most satisfactory. Perhaps the best of all for ordinary cutting purposes is a good strain of Blood Red, the flowers being brighter than those of any other variety. There are also white and yellow varieties, but these are not usually as highly prized as the dark colors. If early flowers are needed sow at once and give the plants the best of attention right along. The wallflower likes a firm and sound soil rather than a rich one. Sow the seed thinly in a frame where the seedlings can have full air from the first and as soon as they have made two or three leaves prick them out two inches apart to gain strength. Make the soil very firm and avoid overwatering in the early stages. The soil where they are eventually planted should be in good condition but not rich and must be thoroughly consolidated by rolling if a large plot, or treading the soil firmly with the feet. Trowel planting at least one foot apart is best and the planter should make firm the soil around them and leave a little depression around each plant to allow of watering in the earliest stages. The position chosen must be open, as these plants delight in ample sunshine and air, and, unless they get it, will be attacked by fungus troubles or blight. After a week or two they are well able to take care of themselves, only needing cultivation between the rows, and they can remain until needed for lifting and benching whenever the benches are ready for them. In localities where the wallflower is hardy the treatment is the same until winter and in such positions as described it is a very profitable crop to grow.

SYRACUSE, N. Y.—Geo. L. Brown has leased the Gaskill greenhouses on North Tod avenue and will continue the business.

BANGOR, ME.—A. J. Loder, who built a new greenhouse on Lancey street this spring, finds that he has not the space to meet the demands of the trade and contemplates building a new house, 24x140 feet, in the near future.

ANOKA, MINN.—The Anoka Greenhouse Co., recently completed a very elaborate floral design in the shape of a private car sidetracked from the main line. Carnations were the principal flower used, the whole design being about six feet in length.

ERIE, PA.—Nearly 200 couples enjoyed the hospitality of the florists' employes at a delightful dance at Assembly hall, April 28. The decorations of palms and other pot plants were unusually beautiful and elaborate and the music furnished by Rea's orchestra left nothing to be desired.

THE RETAIL TRADE

THE pretty little basket figured on this page is the work of Wm. J. Smythe, Michigan avenue and Thirty-first street, Chicago, who makes a number of these choice little trifles for his high class trade.

Gates Ajar.

SEE SUPPLEMENT WITH THIS ISSUE.

Gates ajar is a very popular design, and rightly so, for it is one of the few of what may be called imitative designs that can be made graceful and artistic. As a rule when a designer starts out to imitate something in flowers, such as a book, an anchor or something connected with the person whose funeral the piece is intended for, the thing has to be given more or less of a hard outline, and no matter how graceful and beautiful the flowers themselves may be, the design when complete cannot be called artistic.

With the gates ajar the decorator has a wider scope. The gates are the center of the piece, it is true, and must be imitated in a more or less formal manner, but the foreground, as it may be termed, of the piece may be treated in various ways to suit the fancy of the designer. A walk of solid asters or carnations, leading up to the gates, with clusters of flowers on either side to form the bases of the arch pillars is a very pretty idea. Or the base itself may be spread out and the gates be placed just above it, this being frequently done in the cheaper designs. As to the arch, there is abundant room for individuality on the part of the designer. Hard lines of carnations, violets, asters or something of this kind are not the best way of treating it. The flowers used should be of a lighter description than usual and kept well apart by the use of their own foliage or that of some other plant and allowed to stand out from what may be termed the structural part of the design. Lily of the valley is especially useful for this purpose, also Roman hyacinths when they are in season, while a spray of either or a knot of violets with a tiny bow of baby ribbon may be tied to one of the gates. Success with this kind of design is an elusive quantity. Sometimes a little touch of originality lifts the whole thing from the commonplace, while again the artist may fritter away a lot of time and valuable material and yet fail to produce a good effect.

Pretty Small Basket.

Hyacinths and Maidenhair Fern.

Orchid Bouquets.

That orchids are becoming increasingly popular in decorations of all kinds admits of no doubt; their beauty and distinctiveness from all other flowers and the soft yet beautiful gradations of coloring are among their principal charms, while their long lasting qualities add greatly to their value. Unfortunately, we think, the increasing popularity is almost wholly confined to cattleyas and the many other beautiful species and genera do not increase in anything like the same ratio. There is no getting away from the fact that the cattleyas of the labiata group and the Brazilian species of lælia are among the finest orchids from a decorative point of view but in bouquet making a greater variety is necessary than is afforded in these and it will be to the advantage of orchid growers to see that this branch is not neglected.

The oncidiums stand out as almost perfect flowers for bouquet making; the flowers are bright and telling yet very graceful and light and they last surprisingly well. The one point against them is a lack of variety in color, the great majority of the species containing a good deal of yellow. Still there is plenty of variety from the pure soft yellow of Oncidium concolor through the deeper yellows and chrome tints and the combinations of yellow with brown as in O. crispum, cinnamon red as in O. bicallosum and rose purple as in the beautiful little O. ornithrynchum. Then the deep chocolate brown in O. Lanceanum and the almost indescribable coloring of some of the macrantha group almost do away with the charge of sameness in color. The vandas again are fine for bouquet work from the bright blue V. cœrulea through the paler V. cœrulescens to the charming pink tints of V. Kimballiana, V. Amesiana and V. teres to say nothing of that finest of all vandas V. Sanderiana.

What, again, could be more beautiful than the moth orchids or phalænopsis? The dendrobiums, including D. Phalænopsis, D. formosum, D. Dearei and the scores of beautiful deciduous long bulbed species are fine. The cypripediums are among the most lasting orchids in existence. They are not perhaps as beautiful in some instances as the orchids with which we have been comparing them but the genus contains some gems. What could be finer in a bouquet than the long pendent sepals of C. caudatum and others in this class? The brightly tinted hybrids of the Sedeni section, the showy C. longifolium and C. grande the quaint little C. Pearcei and a host of others could be mentioned without even touching on the great race of true cypripediums of which C. insigne is a well known instance.

This only touches the fringe of the orchid question as it applies to variety. Only a specialist in their culture

has an idea of the marvelous variety this grand family contains but enough have been mentioned to show that there is no need to fear lack of material if only the growers would get after it and retailers would use it. While no flower has a more beautiful effect than the orchid in bouquets it takes an experienced bouquet maker to handle them to the best advantage. There is a singular poise to an orchid of any kind that is different to that of any other flower though to some extent the iris, some lilies and a few other flowers are similar. To get a good effect this natural poise of the flowers must be maintained. A carnation fits in anywhere and any way; even a rose may point up or down or look straight out from the bouquet. But there is just the right pose for a cattleya if its full beauty is to be seen and in no other way will it be nearly as telling or pretty. This point considered and crowding avoided the mechanical part of the bouquet making is easy. The selection and blending of color tints and the choice of a suitable and telling shade of ribbon are the other points necessary to successful and artistic work.

A Birthday Urn.

The fine floral urn figured in the accompanying illustration was made by A. Lange of Chicago, to the order of the Chicago Examiner, for presentation to J. Harry Selz, the well known Chicago and New York shoe man. The presentation was made to Mr. Selz on his forty-fifth birthday anniversary and the lettering under the rim of the urn reads, "45, make it 90." The body of the urn was worked out in Enchantress carnations, the handles being of violets, while the panel on the front was of violets, the name "Selz" being picked out with Narcissus poeticus. Around the base American Beauty roses and Asparagus plumosus was arranged over bronze galax by Mr. Lange's clever designer, Fred Strail, a large bunch of the same rose being placed in the urn. The urn itself was about five feet high independent of the roses and contained about 15,000 carnations. The price obtained for this fine piece was $150.

Lady Florist at Springfield, O.

"Carrie M. Howell, Florist," is the heading a very energetic lady florist of this city uses, a lady, who, to quote our excellent correspondent, W. G. Matthews, of Dayton, "has built greenhouses, works like a man, dresses like a man and pays her bills like a man." He also says, "I ship her lots of stock; she is popular, does a nice business and takes THE FLORIST." Back of this lady's entry into the florist business is a story of her marriage with a minister which did not turn out happily. Wilder, as this gentleman is called, it appears, was a cigarette fiend and had sundry other bad habits, but the worst fault in the eyes of his wife was that he only had "spiritual" love to offer her, evidently not a very satisfactory article, according to Mrs. Wilder, who has since taken her maiden name again and gone into flower raising, which she loves more than the cigarette-smoking parson. "Things are coming my way," is Carrie M. Howell's cheery report. "We have just finished a 30x50 foot addition to my place and business is good." This, we trust, will continue, and we hope the next addition will be 500 feet instead of 50.

BIRTHDAY URN BY A. LANGE, CHICAGO.
Principally Carnations, Violets and American Beauty Roses.

Notes on Dahlias.

Success in growing dahlias depends on the proper observance of little things as well as the quality of the stock. Therefore watch the young plants, give them plenty of air and sufficient room to avoid drawing. Watering is also most important; too much is worse than not enough after the plants have become established. At this time of year young plants do much better in outside frames, where they are covered only on cool nights, than in greenhouses. Frame grown plants are much hardier and are ready to plant out as soon as danger of frost is over, without danger of loss even under unfavorable conditions. Plants in the greenhouse require much more care and extra room to space them in order to avoid drawing—both items at this time of year.

As it is time in many sections for planting it may not be amiss to touch lightly on this subject. If there is plenty of room plant 2x4 feet apart, or even further; 3x4½ feet for strong varieties would be better. It is safe to plant now for bloom in July and by removing the blooms before maturity, that is while they are in the best condition for use as cut flowers, and giving thorough cultivation with a surface application of a good complete fertilizer or mulching of manure as often as the flowers and plants show the need, first-class commercial blooms will be obtained until the plants are killed down by frost. This is based on growing good commercial cut flower varieties on the single stem branching system with all side buds on each shoot removed, allowing only the terminal bud to develop. Where roots are planted do not allow more than two shoots to grow; one will give finer blooms if the season is unfavorable. Another condition is that the soil be not too rich and the early growth not too soft and long jointed.

Look out for green fly and red spider. Neither is to be dreaded if proper precautions are taken, but either will so injure the plants as to seriously impair the crop. Keep the plants short and stocky; pinch them out so they will

branch low. This is simply following nature, as the plants branch as soon as they bloom anyway and why not have them branch low. This gives longer stems with less danger from winds and storms. Thorough cultivation is another essential, no matter whether growing for flowers or roots, so start off by always keeping the surface stirred and never allow a crust to form after a rain.

Regarding the time of planting, almost every grower has a different opinion. The first blooms (not necessarily the first individual flower) are the best in the general course of events, so it is wise to plant at different times for exhibition flowers, according to the date they are wanted. For commercial cut flowers each grower must learn the needs of each variety and the proper time to plant and just how best to handle them to suit their soil, and other particular conditions and needs.

LAWRENCE K. PEACOCK.

THE ROSE.

RICHMOND is showing unusually good form in many places this season.

THERE are inquiries from the best class of retail trade for the old Bon Silene.

THE young foliage of Mme. Chatenay is more easily injured by exposure to strong sunlight than that of probably any other variety.

ROSES are more easily injured than most other plants by fumigating with hydro-cyanic acid gas according to experiments carried on by the bureau of entomology.

Notes in Season.

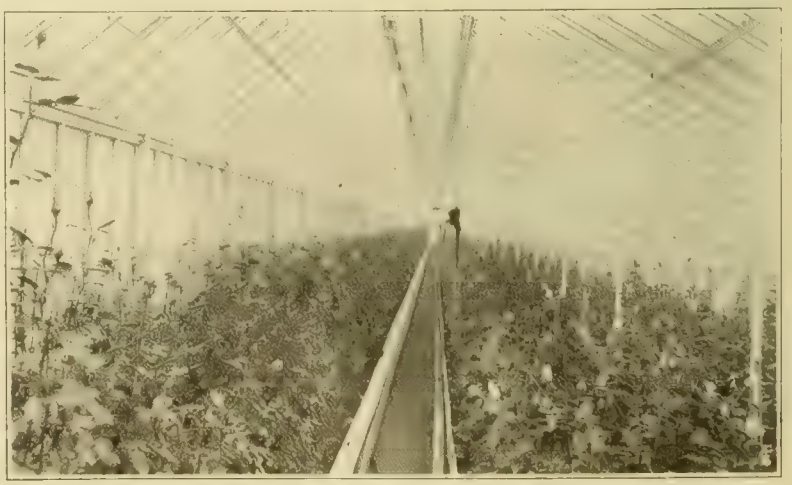
Particular pains must now be taken with both the young plants and the stock on the benches or beds, in order to have them free of spider, thrips and mildew. Ventilating at this season must be done with considerable judgment; the houses should have a crack of air left on at night in connection with the artificial heat, and we strongly advocate running the boilers as long as possible. When the temperature in the houses exceeds 64° with air on at night, and the minimum amount of heating pipes in use, we should then advise banking the fires, but not closing the ventilators in this instance; leave the sash raised about three inches and avoid the condensation that will surely collect on the foliage with the ventilators closed. As a starter for black spot, mildew, and a loss of foliage there is probably nothing to beat the condensation referred to above.

Be liberal with the sulphur when applying it to the pipes; syringe forcibly and have a care when watering not to overdo it, as in some instances the bottom heat may have been cut off and the soil may be drying out more slowly than when the regular firing was in progress. Remember also it is just as essential that the plants that are to run along until the middle of June, or the beginning of July, should be kept tied and cared for generally, as it has been done all winter, not only for the sake of the quality of the blooms (which naturally get smaller as the warm weather approaches) but in order to have fine stock to carry over another season, which is often necessary. This can and should be done when the plants are healthy, for plants properly grown should last two seasons at least before throwing out, and in many cases prove to be more profitable the second year. As for the third year, in a majority of cases coming under the writer's observation, and from practical experience, we do not favor growing forcing roses three years in succession even in solid beds. Of course there may be instances where the same plants have been carried eight or nine years in succession and made to pay fairly well or at least with a fair profit, but these cases are exceptional. After the second season the plants are much slower producing flowers during the winter months just at the time we need them most, and, although at this season the plants in question usually make quite a spurt, I think this spurt is not equal to the extra amount of coal burned while the plants were very poor producers.

The plants from now on will require an extra amount of feeding, which can be done by using liquid cow manure at least once a week, and, if necessary, a light mulch now and then to protect the roots from the sun's rays and to keep the soil from drying out too rapidly when the ventilators are opened to their fullest extent, which they soon will have to be. The pot plants or young rose stock should be shifted after each growth made, and be given plenty of room on a good sunny bench, spotting out the dry plants with a watering pot before giving them a general watering. Syringe now with considerable force; in order to do this with the grafted stock in pots this should be staked and the raffia removed before the ties cut through the bark and ruin the plants, otherwise many plants will be broken if syringed with the proper force. Some soils have a tendency to bake in the pots; often this is due to having too little manure in the potting soil, and if this should occur it will be a difficult matter to keep the plants wet enough, as the soil leaves the sides of the pot. By going over the plants and stirring the surface of the soil lightly with a label or a flat stick this can be remedied and the work can be done quite rapidly. Beware of weeds in the pots; they take more nourishment out of the soil than the plants, once they get a start; and keep the leaves picked off the beds and pots, as the decaying foliage lying around breeds millions of thrips in a very short while in warm weather.

Owing to an extremely cold spring the indoor stock has been kept running along in better condition perhaps than is the case where we have a hot spell during April. The cool weather, requiring the regular firing at night, should have been taken advantage of to have had the continuous fumes of sulphur around, and although the weather has retarded the outside work to some extent it has been favorable in the eastern states to get the stocks hardened off to stand the change caused by cutting off the heat. As stated in a previous article, great care must be exercised in manipulating the ventilators and every precaution taken to keep the plants free from insects and mildew. The pot plants should not be crowded or allowed to become potbound, and very often it may be advisable to go over the young stock at midday with a second watering. Keep them free of draughts and run them a little warmer if need be rather than have the wind blow them about. Keep the walks damp on such days to preserve and to protect the foliage.

It is rather early to offer suggestions for planting, but everything should be planned and preparations made so that when the time comes the planting can be put through without any drawbacks. If there are benches to be built or repaired, have the lumber in readiness. If new houses are being erected, be sure that everything is in the best possible condition before filling the houses even if it takes a week or so longer to get the interior shipshape. Very often the benches are slapped up hurriedly in order to get the plants in and started; one had better give the plants another shift and keep them growing on in pots rather than slight the construction in any way. Keep the compost heap turned as often as possible and have no water standing around the soil pile. About this time one should be using a preventive for thrips. I speak of this again, as the damage these pests do reaches into the dollars very often for weeks at a time, the flower being unsalable where the thrips have gained a foothold. A good preventive is to vaporize nicotine or any of the liquid



HOUSE OF MY MARYLAND AT A. N. PIERSON, INC., CROMWELL, CONN.

fumigating extracts. This can be accomplished by spraying on the steam pipes or by using small alcohol lamps to vaporize the liquid placed in shallow pans and suspended over the lamps. Full directions for using the different liquids will be found printed on the cans or bottles, and as the nicotine is most effective as a vapor for thrips it should be used in this way only. In my next article I will have some suggestions to make regarding bench construction, planting, etc. E.

My Maryland.

As it is now nearing the time for the planting of rose stock those who will grow My Maryland next year may not object to a little talk concerning its likes and dislikes. We have heard all about the beauty and great value of My Maryland and there seems to be no doubt now that we have a grand rose in this sort. For the grower who will handle it properly there must be satisfaction in store. On account of what has been said previous to this regarding temperature it must not be understood that 60° at night means failure when handling this rose, but experience this year would indicate that a trifle higher temperature, say 62° to 64°, would produce better results. The results this year would show that My Maryland is positively a paying sort, every month in the year, and every day now, as the season advances, it is shown what a heavy producer we have in this variety.

Those who have stock well advanced now will profit by getting it benched as soon as possible. Plant in rich soil, continue to feed liberally and don't be sparing with the water; in short, push it right along in these respects and the results will be satisfactory. Red spider is its worst enemy. Don't let this pest get a start and if a spell of cloudy weather holds on too long, syringe, even if the sky is dull. There is little to be feared from mildew or black spot, consequently red spider may be avoided if care is taken. In pinching it is best to cut back quite hard inducing the new wood to come strong and keeping the plants stocky and heavy. The plants should not be allowed to bloom until they have become of good size, but in this respect My Maryland is no different than any of the other forcing varieties. The blooms should be allowed to develop well before being cut, as it is surprising how they swell by being allowed to stay on the plants until the petals are starting to fold back. Even after reaching that stage they will still hold well and stand shipping for any reasonable distance.

An important point in the culture of this rose is in the propagation, but now that this is understood, further trouble may be avoided. Take the cuttings early and give plenty of bottom heat, but hold the temperature in the propagating house reasonably low; about 50° would be right. It is a slow variety to root, but makes up for lost time when once the cuttings are potted. There is no difficult problem to solve, and we may reasonably expect to find it a standard sort on the market for some time. It has many friends now, but they will undoubtedly increase as the rose is more widely grown. When we stop to think of the many points about My Maryland to commend it, the more convincing it is that the variety is one of real worth. Consider what these points are and then judge what they mean. It has good stems at all seasons, none weak and very few short ones are produced. It has a pleasing fragrance and color, never produces deformed buds, while as a keeper and shipper there is none to beat it. Last, but by no means the least important, is the fact that there is great promise of it being the best pink rose we have for hot weather. This point will, in all probability, be demonstrated this summer. R.

ROSE MY MARYLAND AS GROWN S. J. REUTER & SON, WESTERLY, R. I.

Disbudding Young Roses.

ED. AMERICAN FLORIST:—

Two excellent rose growers of my acquaintance have different methods of disbudding their young rose stock, that is removing the buds that form in the points of the shoots before the plants are strong enough to be allowed to flower. One removes them on sight, going over the plants weekly and pinching them out with the fingers, removing also the first leaf or two in the young state. The other allows the buds to come to the size of beans and then uses a knife, also removing the first two or three leaves. Which is correct? Both growers get good flowers. ROSA.

[As both growers mentioned by "Rosa" get good results this would appear to be a small matter. However, we would like to know what experienced growers have to say on the subject which, at any rate, is timely and interesting.—ED.]

ORCHID NOTES.

ORCHIDS with fine foliage are not common but some of the native goodyeras are well worth growing on this account alone while the anæctochili are among the most beautiful foliage plants in existence but difficult to grow.

THE deciduous dendrobiums such as the well known D. crassinode, W. Wardianum and D. Bensoniæ like smaller pots or baskets than the evergreen, bunch flowered kinds of which D. densiflorum and D. thyrsiflorum are well known examples.

Cattleya Skinneri.

The free flowering nature of Cattleya Skinneri is well shown in the accompanying illustration from a photograph taken of a plant that flowered in Dr. Schiffman's collection at St. Paul, Minn., some years ago. The plant illustrated was carrying 60 flowers on eight growths and was a healthy, vigorous specimen. C. Skinneri differs from the labiata section in producing more flowers on a spike, but these are smaller. The flowers are a pretty rose purple with a deeper colored lip, the coloring being on the outside of this segment, not in the throat, as it usually occurs. It likes less root room than the stronger growing species and rather less heat, but otherwise its treatment does not vary much from that advised for the labiata kinds. The flowers are a good deal like those of a dendrobium and are often deliciously scented.

Colombian Orchids.

Consul-General Jay White, of Bogota, reports as follows concerning the orchids of Colombia: "Odontoglossum crispum, one of the most notable of all orchids, is to be found in Colombia on the temperate-climate mountain ridges, in the district between Facatativa and Velez. For many years past thousands of these plants have been sent out of the country, chiefly to London. This orchid is also found on the mountain slopes above the town of Fusagasuga, but the plants gathered in that district are not purchased by European collectors, being considered inferior to those from the other Colombian districts, such as Pacho, which is the headquarters of the trade.

"Contracts are made with natives, who spend weeks at a time in the woods. When a native finds a tree with enough orchids to warrant his work he fells and then strips it of all the plants it bears. This system has naturally caused the wholesale destruction of all orchid-bearing trees in the forests near settlements. The collection continues all the year round. Attempts have been made by legislation to stop this destruction.

VARIETIES COLLECTED.

"The rare varieties of Odontoglossum crispum which have obtained such fabulous prices in London and elsewhere all came from the Pacho district. In many parts of Colombia, various kinds of masdevallias are plentifully found, but of late years little interest has been shown in this genus and the export has fallen accordingly.

"Next in importance to Odontoglossum crispum comes the trade in the many kinds of cattleyas. The best Cattleya Trianæ is collected in the Natogaima district of Tolima. C. Bogotensis is found near the headwaters of the Saldana river and in the forests about Villeta, near Bogota; large exports of these plants are periodically made. C. Schroederæ is found in the mountains near the headwaters of the Meta; also near Sogamoso; C. Mendelii near Santander; C. gigas in Antioquia and Santander; and C. Mossiæ and C. labiata are obtained in Venezuela. C. aurea is chiefly to be found about Yaramul, in Antioquia. This splendid orchid is almost unknown in other parts of Colombia.

"Odontoglossum vexillarium (Miltonia vexillaria) found in Antioquia, is generally taken personally by the shipper when he returns to Europe. In former years many of these cattleyas were sent to Bogota for shipment by the ordinary route down the Magdalena river, but now many are sent down the Orinoco to Trinidad, whence reshipment to London can be effected with little loss of time.

PACKING AND PRICES.

"Orchids should be free from all moisture before being packed. Odontoglossums should be well cleaned, their leaves and roots cut off, and only young shoots left on the plants. All of them require to be packed with dried bracken in well-ventilated crates. No delay should occur on the journey. The crates should be kept in cool places on board ship and well away from boilers and furnaces. To insure their arrival at destination in perfect condition, the leaves of all cattleyas should be carefully packed with dried bracken. As much as $300 has been paid by shippers in Colombia for a single plant of a certain variety of Odontoglossum crispum.

"Of late years the exportation of orchids to the United States has been on the increase, though London still continues to be the headquarters of the trade. Orchids are exported in quantities to the following countries in the order named: United States, Germany, France and England, the values not being given in the official returns." [Photographs of Colombian orchids and natives who collect them, also the addresses of orchid exporters, are on file for public use at the Bureau of Manufactures.]

Abnormal Flower of Cattleya Trianae.

A most interesting abnormal flower of Cattleya Trianæ has come to our notice in the orchid houses of the Missouri Botanical Garden. An importation was received from Colombia in the spring of 1908, which yielded an abundance of flower, the majority being the variety pallida (Lindenia, Vol. 6, 1890). These so called freak flowers are not at all common. There is an unusual amount of interest attached to the one illustrated owing to the entire absence of the labellum. The dorsal sepal is normal, but the lateral sepals are abnormal, being united entirely to the apex, where there is a slight division plainly showing the emarginate tips of the two sepals. The first impression is, that they are the labellum, but with a closer examination this is found to be erroneous. The two petals are perfectly normal, measuring six inches in length and two and a half inches in width. The labellum (lip) is entirely absent; there is not the least trace even of a rudimentary one. The column and the anther case are normal, but the rudimentary pollen masses are apparently the filaments. G. H. PRING.

[The question of deviation from the ordinary conformation of orchid flowers was very interestingly written up by the late Dr. Masters in his chapter on "Teratology of Orchids" in Veitch's well known "Manual of Orchidaceous Plants," Vol. 1, pages 37-49.—ED.]

CATTLEYA SKINNERI.

KOKOMO, IND.—W. W. Coles left last week for Oden, Mich., where he is building a summer cottage. His son, L. A. Coles, has acquired six acres of land on East Jefferson street and is starting in the greenhouse business, building one house as a beginner, 35x300 feet, Lord & Burnham wood and iron construction. The house is now ready for glazing and an 80 h. p. boiler has been installed. Aditional houses will be built next season and American Beauty roses will be grown exclusively.

FLORISTS' FERNS.

CISSUS DISCOLOR is occasionally planted with ferns in baskets and has a very pretty effect.

ASPLENIUM ADIANTUM NIGRUM is a beautiful little plant for growing in a cool house and fine for fern dishes.

THERE are several varieties of Pteris tremula, some of them much fuller and more handsome than others, and it pays to grow the best forms.

NEPHROLEPIS WITTBOLDI and N. Washingtoniensis may be seen growing side by side in the new fernery at Garfield park, Chicago, giving a fine opportunity of comparing these two handsome varieties. Both are doing remarkably well.

Care of Young Stock.

The present is a busy time for the fern grower, the moving of much of the stock in various sizes at Easter making room on the benches that has to be filled with growing stock. This usually has to be potted out of flats or small pots and in any case has to be cleaned over and put in shape upon giving it a new stand. It is folly to put ferns back for growth that are potbound or are carrying bad fronds. Put them in proper cultural shape and they will grow into money, but do not litter up the benches with any other class of stock, for it never pays. It is easy to tell directly one enters a greenhouse establishment whether this fact is kept in mind or not. The grower who is alive to his opportunities never keeps his benches empty, but the plants are kept constantly moving; they are in batches according to size and are brought on one after the other. The careless grower, on the other hand, never knows where he is at. Good, bad and indifferent stock are all mixed up together and it is impossible to tell how many good plants may be picked out of a bench. And those who are slipshod in this part of their work are likely to be so in all others.

It is a pleasure to go among ferns where every size looks at its best, where ferns from the seedling stage up to the finished specimens show the same thriving green appearance. And it is just as easy to have them this way as the other—easier, in fact. Just now the seedling part of the business is the busy end. In large establishments there are hundreds of pans of the green, moss-like prothallus that contain in embryo millions of plants. These need the greatest care. Moisture, in the soil and in the atmosphere, they must have, yet a drip from the bench under which they are staged may lead to wholesale decay, the prothallus damping off in patches that, if not arrested, spread over the entire surface of the pans in which the troubles begin. Overwatering the soil in which the spores are growing is also a cause of failure and the effect of using unsterilized soil is often only too apparent in little patches of dark fungus with a light rim appearing and spreading outward until the whole pan or flat is killed.

Either owing to greater care in saving the spores than formerly or more skilful management afterwards, we can reasonably expect to get a fair proportion of the species sown. It used to be quite common to sow spores of adiantum and find when the character fronds appeared that we had a fine batch of Pteris tremula or one of the gymnogrammas, not a very satisfactory state of affairs, and one that has hindered the raising of ferns from spores considerably. Just now the young ferns are showing the first fronds in many cases and this is the stage at which they should be carefully lifted out in very small patches and transferred to other pans or flats. These may be gently watered and stood on a shaded bench with a sheet of glass over each to maintain a moist atmosphere around the seedlings. The little ferns should not be handled at this stage, but separated by the use of two pointed sticks or toothpicks and placed about an inch apart each way. They soon get hold and when they begin to grow again after the disturbance they may be considered safe and the glasses removed. The treatment of the seedlings from this time on consists simply of shifting them as they require more pot room and keeping them in a genial temperature by day and about 58° at night.

Plants of the new Nephrolepis superbissimma planted out last fall for stock purposes made little progress during the winter, but many fine runners appeared early in April and these are making great progress now. These will also soon be fit for potting off singly and growing on. The gymnogrammas, as hinted above, are very easily raised from seed, but some growers do not have much success with them afterwards. One frequent cause of failure is too much spraying or overhead watering. They like moisture in the air and will not flourish in a dry atmosphere, but the fronds cannot stand the water. It ruins their texture and swills off the gold or silver dust-like particles from the back which are their chief attraction. Cheilanthes elegans is another beautiful little fern needing similar treatment. Baskets of Boston ferns may now be made up for fall and winter use. It is not necessary to use the finest looking plants for which there is a market now. Use the rougher plants with good strong crowns, as they have plenty of time to grow into shapely stock. A few small plants of English ivy placed in the baskets will droop around them with good effect, and such plants sell very readily at good prices.

COMMERCIAL.

ABNORMAL FLOWER OF CATTLEYA TRIANÆ.

WITH THE GROWERS

Hoerber Bros., Desplaines, Ill.

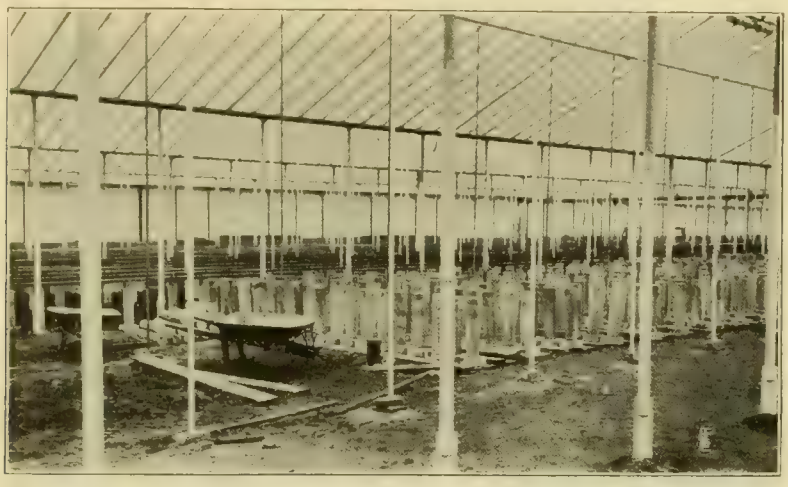
The trade generally that is interested in the Chicago cut flower market has taken much interest in the new establishment of Hoerber Bros. at Desplaines, Ill., now in course of construction, and the fact that the recent storm practically leveled the five houses so nearly completed elicited much sympathetic comment on the part of the greenhouse fraternity.

When the present range is complete, as it is hoped it will be in time for planting for the coming season, there will be 10 houses, each 27½x297½ feet. The building material and ventilators were supplied by the Foley Mfg. Co., of Chicago, and the erection work was in charge of a local firm of contractors. When the storm of April 29 struck, one house was about ready for the glaziers, but the frame was so blown out of plumb and so twisted that it will have to be taken down and rebuilt. The frame work of four other houses was also in place but not yet sufficiently braced and went completely over. Gutter posts and gutters were in place for two other houses, and work has not yet been begun on the last three. As there are some 35 acres of ground about the place, there is plenty of room for later additions. These, it is designed, will be 600-foot houses.

The foundations and cement floor of the boiler house are in. This is a building 50x140 feet, large enough to

take care of the future buildings now contemplated. A 100-foot smokestack of brick will shortly be begun. Two 150-h. p. tubular boilers will be installed, and the Detroit return trap will be used in conjunction.

Frank A. Benthey is the superintendent in charge of the place and will have direct supervision of the rose section consisting of seven houses, to be planted to Bride, Bridesmaid, Richmond, Killarney and White Killarney.



ESTABLISHMENT OF POEHLMANN BROS. CO., MORTON GROVE, ILL.
Interior View of New Addition to Plant B.

Three of the houses will be planted to carnations under Foreman Reinhardt. Most of the carnation plants have already been received, supplied by the E. G. Hill Co., of Richmond, Ind. The plants not received before the big storm late in April were held back, because of weather conditions at Desplaines. A few plants were then already planted in the field. The carnations to be grown will include 3,000 Victory, 3,000 Beacon, 1,500 Enchantress, 3,000 White Enchantress, 3,000 White Perfection, 3,000 Winsor, 750 Afterglow and 750 Winona. It is to be hoped that the new firm meets with no further untoward accidents but only with prosperity and entire success.

The Poehlmann Bros. Co.'s New Range.

We show herewith two views of the new addition to Plant B of the Poehlmann Bros. Co. establishment at Morton Grove, Ill., now in course of erection. The new block of houses includes 13 large structures, each 27x350 feet. Several of the houses are already fully glazed and work is being rushed on the remainder.

Inside the new houses that have already been glazed is a busy scene, scores of men being employed getting up the benches. Some of these are to be of the Wittbold cement construction, and even the wooden benches will be supported by cement posts. Our interior view shows these posts either already placed in position or ready to be so placed. From the top of the posts that are to carry wooden benches protrudes a spike partly imbedded in the cement, so that the stringers for these benches can be quickly attached.

THIS is the season when rash, short-sighted people meet trouble more than half way by sowing grass seed that later on will require the use of the lawnmower.—Greensburg Argus.

Flowering of Seedling Peonies.

Seedlings of varieties of Pæonia albiflora require four to six years to bloom. The seed should be planted as soon as ripe in rich, ripe in rich, mellow soil; if protected mellow soil; if protected by frames, so much the better. They are best left without disturbance until blooming, but if planted too thick, will have to be transplanted. Very double flowers, says Robt. Tracey Jackson, in a paper read by him before the Boston Gardeners' and Florists' Club, rarely set seed, yet an occasional capsule will develop on an otherwise sterile plant. Harrison says that: "Seedlings will often bloom single for years and then turn double." I have never seen such a case. Doubtless seedlings may improve in size and quality with age, but as far as my experience has gone the first bloom, if strong, is a very close indication of what may be expected as the permanent character of a seedling.

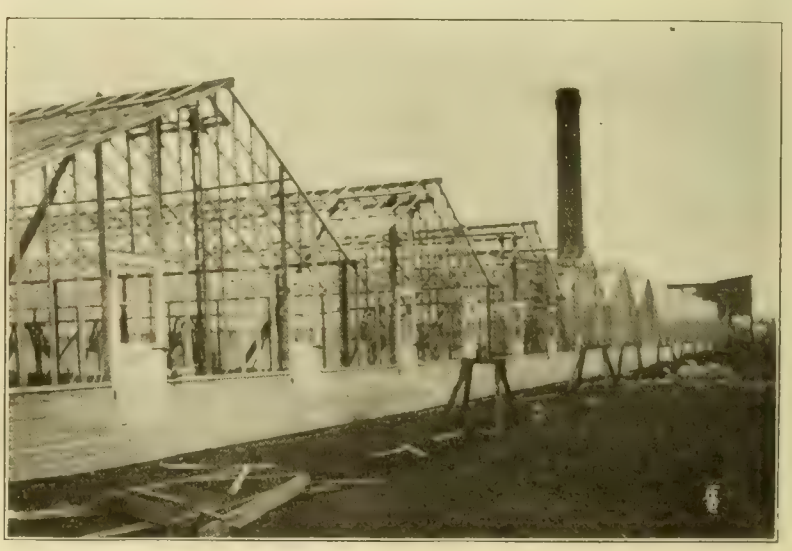
It would be highly desirable for peony dealers to insert in their catalogues, after the names of varieties, the name of the originator. It is only fair credit, and adds much to the interest in these and other plants to know something of their history, who raised them and when. This is done to some extent, but rarely systematically, as it should be. W. A. Peterson, of Chicago, and C. W. Ward, of the Cottage Gardens, Long Island, N. Y., in their catalogues note the originators of peonies very fully; the Lemoines, of Nancy, France, do the same, thought not as fully. On the other hand, the Kelways, of Langport, England, list their own seedlings, but ignore the names of other growers.

Nitrate Combine Broken.

Consul Rea Hanna, of Iquique, advises that at a meeting held on March 29, 1909, it was definitely decided to discontinue the combination among the Chilean producers of nitrate of soda, for the control of the production and exportation of that article. The consul writes: "Forty-one producers, representing 77 'oficinas' (nitrate works), accepted quotas of production aggregating 40,480,000 Spanish quintals of 101.61 pounds each, and 46 producers, representing 77 oficinas, refused to accept the quotas assigned to them. Those refusing to accept demanded quotas aggregating 10,800,000 quintals more than was proposed to them.

"As a consequence the nitrate combination ceased to exist on March 31, 1909. In the future, or until a new combination be formed, there will be unlimited production and exportation by the several oficinas. This condition is desired by many of the producers who possess rich deposits and whose cost of production is low, and the general opinion is that the nitrate market will suffer at least only a temporary fluctuation as a result. The 'Associacion Salitreara de Propaganda,' however, still continues as an advertising medium, and as a statistical department for the industry."

MILWAUKEE, WIS.—School children of the state voted May 7 to determine which should be their favorite flower. There were four entries—the violet, wild rose, water lily and trailing arbutus. The violet left the others at the post, as it were. The wild rose apparently came in second, the water lily third and the arbutus trailed way behind.



ESTABLISHMENT OF POEHLMANN BROS. CO., MORTON GROVE, ILL.
Exterior View of New Addition to Plant B.

To Be Done Now.

IN THE GREENHOUSES.

Push on with the propagating of any chrysanthemums of which stock is short.

Plant up a few roses of various kinds when throwing out the benches, as they may come in useful for making good on held-over benches of the same variety later.

Remove any spare shoots from the Memorial day hydrangeas and root them. Four or five of these in a pot make nice stock for next season.

Allow newly imported cattleyas to make some root before giving much peat and moss, and water with care.

Continue to pot on young decorative stock as there is room for it, and throw out any plants that are over and not needed for propagating.

Do not allow coleuses to flower. Remove the flower buds on sight, as they are a hindrance to growth.

Great care is necessary in watering plants. The bright bursts of sunshine soon find a dry specimen and if in small pots they must be looked over every forenoon, after the night moisture has dried off.

Begin to feed the pelargoniums as soon as the flowering pots are well filled with roots and look out for green fly.

Keep the young carnations well pinched back until the requisite number of shoots are produced.

Zinnias and French marigolds are among the most tender annuals and should be kept under cover until all danger of frost is past.

OUTDOORS.

Thin out eschscholtzias and hardy annuals early to avoid their running up to flower.

Where the soil is poor a good top-dressing of manure should be laid on the rose beds after the pruning is finished.

Red dogwood and forsythia planted close together are very beautiful at this time. There is a hint here for the planter.

Where there are vacant places between the roses plant out a few asters or stocks to fill up; they will be showy after the best of the rose bloom is over.

Keep the hoe going between sweet peas and place supports to the vines before the plants have a chance to fall over.

Remove the protective material by degrees from rhubarb that has been forced in the open to give the plants a chance to harden gradually.

Nitrate of soda, used either in a liquid form or a little sprinkled around the plants, is the best stimulant for early cabbage, cauliflower and other brassicas.

The burnt refuse from a garden fire is excellent material for sprinkling over seed beds when preparing them or sowing in the drills. Where concentrated manures have to be sown it is a good plan to mix them with several times their bulk of this to facilitate their even distribution.

Sow a few radishes with parsley and other slow germinating vegetable seeds to mark the rows for early cleaning.

Plant out asters, phloxes and other semi-hardy annuals from flats or frames as soon as the soil can be got into good condition.

Rosa rugosa is one of the hardiest of roses and perhaps the finest of all the garden varieties for planting for hedges and in windswept positions.

AN EVERBLOOMING SALVIA.—F. W. Fletcher, of Auburndale, Mass., claims to have an everblooming salvia of the habit of Splendens and nearly as tall. He thinks it originated as a seedling of this variety.

Twenty Years Ago.

MAY 1889.

Eucharis Amazonica was one of the choicest of white flowers used in bouquets and designs.

The thanatophore, an apparatus for fumigating, of French design, was being exploited.

Growers were budding Marechal Niel rose on General Jacqueminot and other hybrids.

Many fears were expressed that the tulip had outlived its usefulness owing to a season or two of poor demand for the forced flowers.

The beautiful Golden Spur narcissus was becoming very popular.

The Late John A. Shellem.

See Obituary, Page 752, in Last Issue.

Considerable discussion was going on as to the derivation of the word "moonvine" as applied to the ipomæas.

The great German authority on orchids, Professor Reichenbach, died May 6 at the age of 65. "Reichenbachia," the monumental work devoted to orchids, published by Sander & Son, was named in compliment to him. Much comment was made at the time about the professor willing that his herbarium should be left unopened for a long period after his death.

A cut of Adiantum gracillimum used to illustrate an article on and given the title of the "Cut Leaved Sumach," showed the methods used by some of the horticultural periodicals.

OBITUARY.

Alvin C. Schroeter.

Alvin C. Schroeter, a well known and poular florist of Bayonne, N. J., died at his home in that city May 2. He was stricken with paralysis on April 30, and a recurring stroke ended his life as above stated. Mr. Schroeter was born in Essen, Germany, 69 years ago and learned the florist business in his native land.

He came to this country when a young man and worked for several years as a private gardener in Jersey City and Bayonne. He had been a resident of Bayonne for about 40 years and for 35 years had been in business for himself. He had about 10,000 square feet of glass and had a good local trade, growing general stock. He had a wide acquaintance among florists and was popular with members of the craft as with neighbors and patrons of his greenhouses. He is survived by two sons.

The Florists' Hail Association.

ED. AMERICAN FLORIST:—

The Florists' Hail Association is doing its work so quietly that many do not know what a good work it is doing. I recently had word from our genial secretary, John G. Esler: "We are hit $10,000 worth in Omaha and Council Bluffs. Several are frozen out, besides losing all their glass. Probably one of the most destructive storms on record. Hail insurance a Godsend." I decided to send you a list of the losses paid in the last few months. A word to the wise is sufficient. Write to John G. Esler for blank application for membership, and insure against loss by hail in the Florists' Hail Association of America, which is now insuring over 30,000,000 square feet of glass.

DATE OF LOSS.	NAME.	DATE PAID.	AMOUNT.
Nov. 23, 1908	Julius Steinhauser, Pittsburg, Kas.	Dec. 23, 1908	$ 60.08

In fact, there's nothing that keeps its youth
So far as I know, but a tree and truth.
—Holmes.

National Council of Horticulture.

"The Cockscomb," "Window Gardening," "The Syringa or Mock Orange Bush," "Phlox," "Roses for the Home Garden" and "Peonies" are the titles of the articles comprised in the seventh and eighth installments of the press service of the National Council of Horticulture. Everyone connected with the trade in any of its branches should call the attention of local editors to the timely and useful nature of these articles which may be obtained free of cost by applying to James H. Burdett, 1720 West 104th place, Chicago.

MAY 6 was the anniversary of the death of two great men in the horticultural world. Humboldt, who died in 1859, and Reichenbach, whose death occurred in 1889.

ELSEWHERE in this issue we give a list of the recent losses paid by the Florists' Hail Association. This statement shows $4,578.12 paid on losses incurred since November 23, 1908, and all but $82.13 of this amount, or $4,495.99, was paid on losses incurred during the past April.

TWO local florists are advertising in the Calumet Weekly Index of May 8, a paper published at West Pullman, Chicago, while it denounces the use of flowers at funerals in the flimsy argument that the money used for this purpose should be spent for the welfare of the living.

LACK of perfume is a great drawback to some of the newer and finer varieties of sweet peas. We say "some" advisedly, as there are many of the new ones as delicately perfumed as the old garden varieties, grown before the sweet pea was so much in the limelight. Unfortunately, however, the reverse is usually the case.

STATE vice-presidents of the Society of American Florists should start now to stir up interest in their states for the coming twenty-fifth anniversary meeting of the society at Cincinnati. Special through cars can be arranged and nearly every state from Maine to California should send at least a carload delegation. California certainly should do it, and so should Texas and other southern states, as well as Washington, Oregon and British Columbia.

Society of American Florists.

NEW NATIONAL SHOW COMMITTEE.

President Valentine has appointed the following committee to take up and formulate plans for holding another National Flower Show:

F. R. Pierson, Tarrytown, N. Y., chairman.
F. H. Traendly, New York.
J. K. M. L. Farquhar, Boston.
W. J. Stewart, Boston.
Edwin Lonsdale, Philadelphia.
Robert Craig, Philadelphia.

The committee to have power to add to its membership at discretion. It is the intention that this committee shall have entire charge of formulating the preliminary arrangements for a show and that it will be prepared to report at the next convention, suggesting a time to hold the show, the city in which it shall be held, and to perfect and present a complete organization to carry forward the project to completion.

W. N. RUDD, Sec.

May 7, 1909.

Personal.

Otto Will and wife of Minneapolis, Minn., have completed their honeymoon tour of the world. The much traveled couple called at this office on their way home, by way of Kansas City, Mrs. Will's former home. Otto says it is a long way round and that the "tall towers" of little old New York looked good to him from the deck of the returning steamer.

W. W. Coles of Kokomo, Ind., and Oden, Mich., is building a summer cottage at the latter place. Members of the Sucking Pig Club will note the summer location which is somewhere between Petoskey and Mackinaw City.

Prof. John Craig, of the Horticultural Department of Cornell University, Ithaca, N. Y., is a sincere believer in advertising, going so far as to loan his portrait to the correspondence school cause.

Chrysanthemum Society of America.

President Elmer D. Smith has appointed Chas. H. Totty, Madison, N. J., Edwin Jenkins, Lenox, Mass., and I. W. Powell, Millbrook, N. Y., to serve as the executive committee for the ensuing year. The Massachusetts Horticultural Society and the Lenox (Mass.) Horticultural Society have affiliated with the Chrysanthemum Society of America for the year 1909 and C. S. A. trophies will be offered for chrysanthemums at the fall shows of these societies. As secretary of this society I heartily endorse all that President Smith has written regarding the wishes of the officers of the society to increase its membership. We need every chrysanthemum enthusiast and shall be pleased with the support of everyone who grows a chrysanthemum.

C. W. JOHNSON, Sec'y.

Information Versus Criticism.

ED. AMERICAN FLORIST:—

In your issue of May 1 "Raffia Strings" undertakes to tell us "the way the wind blows." This is the first time that I have ever been accused of nature faking. Up to the present time I always had the impression that nature faking was done with the pen and not in greenhouse heating. I am asked to tell how I heat my greenhouses and use the colder air as a blanket to protect the plants. Perhaps the best that I can say in answer to critics of this kind is that I do not know how, but simply do it. "Raffia Strings" seems to know how it is done, we will let him tell us. If his long experience has taught him why this statement is not true and why large high greenhouses require less heat than the smaller ones, I would like to have him tell.

I have labored with the heating problem for a good many years, beginning 10 or 15 years before E. M. Wood of Natick, Mass., built his iron houses. I had the good fortune to be in Mr. Wood's employ before and during the time he built the iron houses referred to, and many valuable lessons I learned there. No man better appreciates the advancement made by Messrs. Wood and Montgomery in our business, both structural and cultural, than myself. I do not mind being classed as one of the youngsters, but would like our patriarchs to give us some information. We invite criticism, even ridicule is accepted, although not always enjoyed, provided with it comes a clearer understanding of the subject under discussion, but ridicule and criticism are of little benefit for their own sake. I hope the patriarch can stop stroking his whiskers and come out from behind his raffia strings long enough to answer this question, "How and why the large greenhouse requires less heat than the small one and why the bottom part of the greenhouse is warmer than the top?" The man who can set us right is the man we are looking for.

W. H. ELLIOTT.

Brighton, Mass.

Wants, For Sale, Etc

One Cent Per Word, Cash with Adv.

For Plant Advs., See Ready Reference Section.

Every paid subscriber to the AMERICAN FLORIST for the year 1909 is entitled to a five-line WANT ADV. (situations only) free, to be used at any time during the year.

Where answers are to be mailed from this office, enclose 10 cents extra to cover postage, etc

Situation Wanted—As manager of greenhouse private estate, institution or nursery by a capable, reliable industrious and sober florist.
Box 351, Fredericktown, Mo.

Situation Wanted—Young woman, 10 years' experience general work in flower store, desires position. Address F. R.,
care American Florist, 1133 Broadway, N. Y.

Situation Wanted—As foreman and grower of high grade roses carnations and general stock by a married man; highest recommendations as to ability, etc. Key 862, care American Florist.

Situation Wanted—By young man, single, 16 years' experience as all-around florist and gardener in Scandinavia, England, Germany and this country; am five years in charge of present position; please state wages and particulars.
Key 851, care American Florist.

Help Wanted—A No. 1 good rose grower. Address GEORGE NUTTING
109 Cotton Ave., Macon, Ga.

Help Wanted—Single man for fern section, experienced in forcing valley.
J. M. GASSER CO., Rocky River, O.

Help Wanted—A man for general greenhouse work; one experienced in propagating pot plants, 'mums and bedding stock. Address
Key 849, care American Florist.

Help Wanted—Assistant for greenhouse and outdoor work; private place; $35.00 a month and board. Address VAUGHAN'S SEED STORE,
84 Randolph St., Chicago.

Help Wanted—At once; grower of general greenhouse stock; must be competent; wages $75.00 per month. Address M. LANGOHR
Bozeman, Mont.

Help Wanted—Experienced seedsman especially for house work on garden seed and packet seed department; also to travel on the road three to four months during the season. Address
Key 857, care American Florist.

Help Wanted—An all-round greenhouse man, single, who understands designing; carnations, 'mums, pot plants and general line of plants; sober, give reference also state wages with board and room. J. M. NUSSBAUMER, San Angelo, Texas.

Help Wanted—We are in need of an all-around young florist and gardener for a small place who understands growing pot plants and cut flowers; steady work for the right man who is not afraid to take hold; good Christian, sober man preferred; board furnished; address stating salary and references to J. RINDFLEISH Beloit, Wis.

For Rent—Four greenhouses and lot; in good condition and good neighborhood; half block from car line. Apply to R. VIRUS,
1939 W. Leland Ave., Jefferson Park, Chicago.

For Sale—Fine greenhouse business with property; only one in good town of 5000 near Cleveland, O.; a paying chance, investigate.
SUSSER & ESTEF, 507 New England Bldg.,
Cleveland O.

For Sale—In central northern state an old established florist business over 15,000 ft. glass well stocked about ten acres land $2,500.00 down ballance on time to suit purchaser.
Key 799, care American Florist.

For Sale—$500 will buy the only greenhouse and florist business in one of the best counties of Illinois. Possession given after June 15. Investigate this bargain without delay. Address
Key 806, care American Florist.

Head Gardener.

Is open to engagement in or aronnd Chicago after December 1. Highly practical in all branches.

Key 804, care American Florist.

Young Man's Opportunity

The advertiser wants a young man who has had some years' experience in practical greenhouse work to call on the greenhouse trade. Good opportunity for young man with ability to sell goods. State age, experience and salary. Address

Key 859, care American Florist.

FOR SALE.

The Greenhouse Property, to Close the Estate of M. J. Lynch, Deceased.

The old established Greenhouse property of the late **M. J. Lynch,** on the South Road, near the City of **Poughkeepsie, N. Y.,** consisting of **Sixteen Greenhouses,** thirty thousand square feet of Glass, with entire stock of Palms, Roses, Carnations, Bedding Plants, and Plants of all kinds, etc.

Eight-room Dwelling, with hot-water heating and slate roof, also.

Five-room Gardener's Cottage adjoining Greenhouses.

Large substantial Carriage House.

This is a valuable location, with ample water supply, adjoining Rural Cemetery, on line of Wappingers trolley, one mile and a quarter from Court House.

Chicago Florists' Club Meeting.

The regular meeting of the Florists' Club was held at the Union restaurant May 6, President Asmus in the chair. The following new members were elected: A. A. La Vogue, 442 Wabash avenue; Otto Goerisch, 19 East Randolph street; P. W. Peterson, Joliet; T. M. Vogel and W. J. Smythe, Thirty-first street and Michigan avenue. Resolutions on the death of E. V. Hallock, Queens, N. Y., were read and adopted. Allie Zech for the bowling club urged more enthusiasm among the trade and hoped there would be a better turnout for future meetings. Bowling takes place at Bensinger's Alleys, 118 Monroe street, every Friday evening. T. E. Waters reported that H. R. Hughes and Fred Lautenslager had recovered from their recent attacks of illness and were again attending to business. He also reported L. Coatsworth and A. I. Simmons seriously ill and the president and secretary were instructed to attend to these cases. Ed. Enders presented his report of the recent cinch party at the Grand Pacific, which was considered a great success by everyone who attended, and returned to the treasury some $8.11 of the amount voted for the occasion. J. C. Vaughan made some comments on the present situation with regard to tariff on seeds and bulbs and this subject brought out considerable discussion, most of those present apparently favoring the specific rather than ad valorem duties. Aug. Poehlmann, however, believed that the changes advocated by the trade committee with regard to bulbs would not benefit the greenhouse growers, but rather tend to the advance of prices by bulb growers abroad, on account of increased demand for the higher grades. E. F. Winterson for the committee on co-operation with the committee of the Horticultural Society on flower show matters stated that a joint meeting of the two committees had been held at which the representatives of the club requested certain exhibition concessions in return for the assistance and co-operation of all the members of the club, entertainment during the flower show to be provided from the profits of said concessions. Mr. Winterson urged that his committee be given full power in this co-operation with the Horticultural Society and this request was granted. The new by-laws were read by title and will come up for final reading and discussion at the June meeting. Chairman Bruns of the auditing committee said his report was ready and would be presented next month. There was some talk of a stag night and the annual picnic, but the details were not sufficiently advanced for publicity.

THE E. V. HALLOCK RESOLUTIONS.

Whereas, The Chicago Florists' Club, recognizing the great loss sustained by American Horticulture and Floriculture in the death of Edward Valentine Hallock, March 2, 1909, his painstaking efforts throughout a busy life to enlarge and elevate these lines of industry by the development of plants and flowers to take the place of those already in hand, particularly the species and varieties of lilium and gladiolus; his penetration and skill in breeding and propagating which wrought such changes in the gladious as to make it a popular and genuine flower of the people at home and abroad, his willingness to impart information acquired by long experience making him at all times a generous benefactor of the trade, his overflowing goodness of heart which made him the friend and counselor of everyone, therefore, be it

Resolved, That we deplore his loss and record here our deep sense of its magnitude, with sincere gratitude for the well directed application which has contributed largely to the making of gardening an art at once educational and inspiring to the community and an honor to engage in it, and be it further

Resolved, That we tender the relatives our sincere sympathy in their greater loss, and further,

Resolved, That these resolutions be made part of our records and copies sent to the family.

April, 1909.

J. C. VAUGHAN.
F. F. BENTHEY.
Committee.

Chicago Notes.

Louis Wittbold spent Saturday and Sunday at the home of his wife's father at Wheeling.

T. E. Waters, of A. L. Randall Co., left Sunday night on a business trip through the state. He expects to be gone about two weeks.

Vaughan & Sperry expect to be located in their new quarters at 50-52 Wabash avenue by May 20, in time to take care of the Decoration day business.

City Forester Prost urges the establishment of a municipal nursery and subsidiary branches, asserting that shade trees lower the death rate among children and old persons. He also discourages the raising of box elders in the Twenty-eighth ward, and suggests the cultivation of Carolina poplars and elms.

The greenhouses of V. Bezdek, at Wilmette, are to be known under the firm name of the Northwestern Floral Co. Six new houses are going up at Grosse Point, each 25x120 feet, to be planted to American Beauty roses and the best standard carnations. In the fall three more houses will be added to the same range in which sweet peas, to be followed in the spring with American Beauty roses and carnations will be grown. The old establishment at 1775 Charles street will continue to be run in conjunction with the new place.

A DEAD MARKET.

Running the gamut from summer heat to winter's blasts, last week closed with a steady, cold rain on Saturday that lasted through Sunday morning and left the market rather overstocked with carnations which, earlier in the week, had been sufficiently scarce to hold the price very firm. Mother's day was also quite a factor in moving white carnations, but, as usual, several growers held back their stock until late Saturday with the usual result that the market was overstocked and the price fell off. Roses, which had shortened up at the week-end were a glut in the market by Tuesday, even Killarney and Richmond being in excess of the demand. Cattleya Mossiæ which came in in large crop, and of especially good quality were hard to move. Harrisii lilies fell to $1, while callas had quite a call at $1-$1.50. Sweet peas are very plentiful and of especially good quality. A very few good double violets are seen and sell well. There has been no change in the price of common ferns although one house reported the receipt of 200,000. There was very little lilac in the market and smilax was almost a negligible quantity. The demand for all flowers was very light and buyers were almost making their own prices. Whether this paucity of demand was due to the cold weather or the near approach of Decoration day it is hard to say, but the fact remains that, had it not been for the shipping orders on Monday, the market would have been decidedly lifeless.

NOTES.

Mrs. Orland P. Bassett of Hinsdale died early on the morning of May 7 in the Mary Thompson hospital, of tropical intestinal fever. She is survived by Mr. Bassett, her mother, Mary E. Andrews of Berwyn; one sister and four brothers. The funeral was from the family residence in Hinsdale May at 1:30 p. m., the Rev. Dr. Brown, pastor of the Congregational church of which Mrs. Bassett was a member, officiating. Many beautiful and elaborate floral pieces were sent by friends in the trade, who sympathize with Mr. Bassett in his bereavement. Interment was in Oak Forest cemetery.

A lot of good funeral work was handled at the Fleischman Floral Co.'s down-town store during the week, including some exceptionally fine wreaths. One especially, standing about six feet high on an easel, was a superb piece. Blue Spanish irises, stocks, white sweet peas and swainsona were the principal flowers used, and it was a beautiful combination. Some of the finest Richmond roses we have ever seen were shown at this store this week, the product of Geo. Reinberg's range, and also fine Cattleya Mossiæ from the same establishment.

Many Chicagoans observed Mother's day on Sunday and the white carnation, the emblem of the occasion, was in evidence in the church congregations and on the streets. Gifts of flowers were sent to the various hospitals and homes, and members of the G. A. R. and Sons of Veterans observed the day at the request of the national commanding officers.

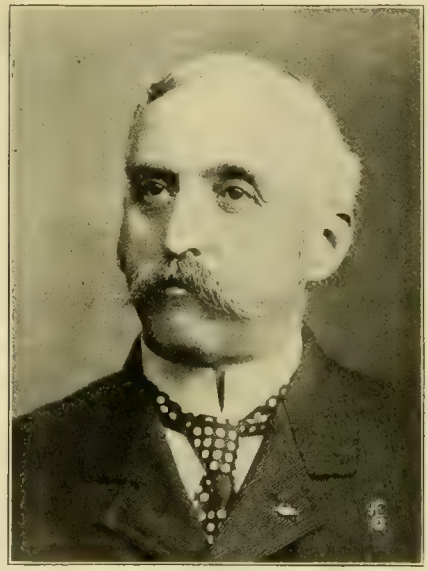
The baseball bug has again innoculated the market and all along the line they are willing to forget business and argue the relative merits of the Cubs and Sox. This is especially true at Peter Reinberg's where Leonard Kill swears that the Cubs will win a fourth straight pennant.

A bill has been introduced in the state legislature to enable the park commissioners to issue bonds to raise funds for the acquisition and improvement of additional small parks. It has been made an emergency measure and will take effect immediately on its passage.

Now that E. C. Cooley is no longer in charge of the public schools it might be a good idea to visit the school board with a view to having the embargo lifted on the custom of giving flowers to the charming girl graduates at the June commencements.

The Geo. Wittbold Co. reports the receipt of large shipments of palms and bay trees from Belgium. Geraniums and bedding stock are in good condition and plentiful with this firm. The decorative work shows no abatement.

Vaughan's Seed Store had a flower garden scene in the window which attracted much attention this week. Baby Rambler, Dorothy Perkins and Hiawatha roses, geraniums and salvias in bloom were the principal plants used.



George Sykes.

Lord & Burnham Co.'s Chicago Representative.

We clip the following from the Tribune: "Leonard Kill of 3469 North Robey street is 37. He was born amid the ruins of the 'big fire,' in a rough shed afterward used as a barn, at the corner of Kinzie and Market streets."

One of the coyotes that escaped from Lincoln park last Saturday ambled by the Geo. Wittbold Co.'s place, and was assisted on its way by the shouts of several of the employes, who chased it as far as Halsted street.

P. J. Foley celebrated his forty-second birthday on Wednesday. The Chicago Tribune, commenting on this fact, says that "everyone in the lumber district knows the 'baby.'"

John M. Clark, secretary of the Leonard Seed Co., has just celebrated his forty-ninth birthday. Mr. Clark lives at 2430 North Paulina street and first saw the light in Scotland.

The Bohannon Floral Co. will move on June 1 from the present location at 29 Monroe street to 11 Monroe street, a store in the new University Club building.

Geo. Reinberg speaks very favorably of the Taylor steam trap, having had one under trial for some time, and has ordered several installed.

Wietor Bros. are cutting 1,200 long American Beauty roses per day and are having no trouble in moving them.

Home-grown peonies promise to be scarce for Decoration day and most of the stock will be southern grown.

The J. B. Deamud Co. is showing some very large daisies, of which it is receiving a large supply.

Poehlmann Bros. Co. were showing some especially fine white peonies on Saturday.

Visitors: W. W. Coles, Kokomo, Ind.; Frank Wolf, Elitch's Greenhouses, Denver, Colo.; H. E. Philpott, Winnipeg, Man.; Otto Will and wife, Minneapolis, Minn., returning from their wedding tour around the world; E. Crooks, Benton Harbor, Mich.; A. L. Glaser, Dubuque, Ia.; S. M. Wyatt, Watseka, Ill.

New York.

SPRING FLOWERS PLENTIFUL.

There was little in the condition of the cut flower market during the past week that calls for extended comment. Continued heavy arrivals of American Beauty roses have put the price very low; 10-15 cents each for specials being about the best that could be done with the bulk of that stock. Though it has been a cool spring, much rose stock seems to be falling off greatly in quality, the deterioration of Richmond being very marked. Though the amount of stock of the pink rose, Kate Moulton, that reaches this market is limited very favorable comments are now being passed on the color and keeping qualities of the blooms. It is evidently, if well grown, a rose of substance. The Enchantress, another pink rose being grown at Robt. Simpson's range at Clifton, N. J., is also coming in for many good words. Carnations are still in good quality, and sufficient quantity to supply all demands and have been cleaning up fairly well, though it cannot be told what another week may bring forth. The violet season is about over, though some very fair blooms have recently come in. The versatile street vendors are not losing any time on account of the passing of the violet season. In addition to many fair roses they are handling the surplus of outdoor lilacs, and indications now are that it will be a large surplus. Briefly stated, spring flowers are all about and, for the next few weeks, it will take some lively hustling to move them all.

May 10.—Chaos is the word that fully expresses the condition of the market this morning. It is no longer a question of prices, but a wild scramble to unload surplus stock. Special American Beauty roses are selling as low as eight cents each, and it is a very fine tea rose that brings four cents. Other stocks are being slaughtered in proportion. After an illness of seven weeks, four of which he was bedfast, Frank Millang appeared at his place of business this morning. He has had a severe attack of pneumonia.

FLORISTS' CLUB MEETING.

The regular monthly meeting of the Florists' Club was held on the night of May 10 in the Grand Opera House building. Resolutions were presented on the death of W. C. Krick, long a member of the club. Mention was made of the death of John H. Starin, an honorary member of the club. The following committee was appointed to prepare a suitable memorial on the death of John Scott, a former president of the club: John Birnie, W. E. Marshall and Harvey Werts. On the death of Herman Dreyer, long a member, the following committee was appointed: John Donaldson, Joseph A. Manda and Robt. M. Schultz.

S. S. Butterfield read the paper on "Plant Development" prepared by the venerable C. H. Allen of Floral Park. On account of the delicate condition of his health, Mr. Allen was unfortunately unable to be present. A vote of thanks was tendered Mr. Allen for the paper. There was a general discussion on the subject of a suitable plant market for this city in which a number of members participated. On the motion of Chas. H. Totty the following committee of five was appointed to look into the matter: C. H. Totty, John B. Nugent, Jr., John Birnie, A. L. Miller and Louis Schmutz. There was a fine exhibit of plants and John Birnie received a vote of thanks for his efforts in securing it. The following were the awards:

To Herman Mende, Secaucus, N. J., for geraniums, begonias and mignonette, cultural certificate.

To A. C. Schroeter & Son, Bayonne, N. J., mixed coleus, vote of thanks.

To Fred Engel, West Hoboken, N. J., coleus, vote of thanks.

To A. L. Brown, Kearney, N. J., vines, vote of thanks.

To Chas. Hunt, Staten Island, hydrangeas, fuchsias, pansies and geraniums, cultural certificate.

Geo. Fick, W. Hoboken, N. J., African marigolds, vote of thanks.

Hartmann & Wagenfohs, Winfield Junction, L. I., three plants of Frau Karl Druskie rose, vote of thanks.

Herman Steinhoff, W. Hoboken, N. J., six rambler roses, new variety, vote of thanks. Awards committee wishes to see this rose again.

John Tschupp & Co., W. Hoboken, N. J., geranium, cultural certificate.

John Birnie, W. Hoboken, N. J., Heliotrope geraniums and verbenas, vote of thanks.

John Lappe, Maspette, L. I., phlox, vote of thanks.

Fred Englen, W. Hoboken, coeler, vote of thanks.

John Reickert, Union, N. J., Crimson Rambler roses, vote of thanks.

Chas. Schmieg, Elmhurst, L. I., daisies and verbenas, vote of thanks.

Robt. Leach, candytuft, cultural certificate.

Geo. C. Simms, James Meiklejohn and —— Weissman were elected members. Messrs. Simms and Weissman were presented to the club and made brief but appropriate remarks. It was reported that Wm. C. Duncan, a member of the club, had mysteriously disappeared from his home at Sparkhill, N. Y., on May 4. A letter was read from W. H. Elliott of Brighton, Mass., expressing his appreciation of the reception accorded him while present at the last meeting of the club to read a paper. The resignation of S. C. Byrnes was received, and accepted with regrets.

NOTES.

A report was freely circulated during the past week that Paul M. Pierson had purchased from George Law, the Briarcliff range, noted for its American Beauty roses, which are sold through the New York Cut Flower Co. In addition to being associated with his brother, F. R. Pierson, in the Scarborough range, Paul M. Pierson has been superintendent of the Briarcliff greenhouses which he is now said to have purchased.

Agreeable to previous announcements, the Manhattan Flower Market, 46 West Twenty-eighth street, opened promptly on the morning of May 8, with a good stock and plenty of customers. All who have visited the place have been favorably impressed with the facilities for doing business and Manager Young comes in for congratulations.

On May 2, the Carnegie hero fund commission, in session at Pittsburg, Pa., awarded a silver medal to Mrs. Lulu J. Small, wife of Chas. A. Small, the resident partner in the firm of J. H. Small & Sons. On September 17, 1907, at Sea Gate, Mrs. Small saved two women from drowning. She had previously been awarded a medal by congress.

Chas. Millang has opened a branch store on the ground floor of the Coogan building, Sixth avenue and Twenty-sixth street; Paul Meconi is in charge. The success of his new store at Sixth avenue and Twenty-seventh street, has prompted Mr. Millang to make this new move.

N. Y. Cut Flower Exchange

Coogan Bldg., 6th Ave & W. 26th St., New York.
Open for Cut Flower Sales at 6 o'clock Every Morning.
Desirable Wall Space to Rent for Advertising.

V. S. DORVAL, Secretary.

Mothers' day was celebrated here May 9 by the wearing of white carnations by men and women, on the street and in places of worship. Many preachers chose motherhood as a subject for their discourse and many churches were decorated with white carnations.

Mrs. Lulu Small has been awarded a Carnegie medal for her bravery on the occasion of her saving the life of two women at Sea Gate in September, 1907, under circumstances reported in THE FLORIST.

A. Warendorff, of 1193 Broadway executed the prize winning decoration for the automobile parade, held here May 3.

A. Herrmann will sail for Europe May 15 on the S. S. Kronland.

Visitors: Otto Will and wife of Minneapolis, Minn., returning from their wedding trip abroad.

Buffalo.

TRADE FAIR.

Weather conditions are still very changeable and trade only fair. Stock is equal to all demands with carnations still not plentiful. Sunday was Mothers' day but the increased demand for the white carnations was not what could be expected. Speaking from a florist's point of view the day will never be what it should as it always is on Sunday and many of the business men who would be only too glad to honor the mothers on that day are not down town or where the carnation can be had. Possibly by plenty of advertising it may in a few years become popular and a good day for the florists. Let us hope so.

NOTES.

Geo. McClure & Son have just finished the planting of 80 trees, from 8 to 10 inches in diameter and about 30 feet high. The planting was to be done in 30 days, but they had it completed in less than 15 days. The work was done on Penhurst park, one of our new streets in the vicinity of Delaware park, and is a great advertisement for the firm.

Sunday being the first good day in a long while, we journeyed to Eggertsville and called on Christian Christensen. We found him well stocked for spring trade with geraniums, fuchsias, vincas, etc., and three houses of fine carnations. He also has a fine lot of Boston ferns. Mr. Christensen is very hopeful of a good spring trade.

We are sorry to hear of the illness of Chas. Sandiford, which we hope will not be serious.

Mrs. Wm. Scott is very ill and grave fears are entertained for her recovery.

Visitors: Wm. Smith of W. J. Boas & Co., Philadelphia; M. Schloss of Schloss Bros., New York. BISON.

ROSES PLENTIFUL.

The feature of the past week was the celebration of Mothers' day, which occurred on Sunday, May 9. On this day everyone is to wear a white flower in honor of the best mother that ever lived—their own. This is the third annual celebration of the day or custom, which is the idea of a lady of this city who has for some time worn a white carnation in honor of her mother on her birthday. The beautiful sentiment expressed in the remembrance of one so dear to all met at once with the hearty approval of those who heard of it, and now, at only its third anniversary, the custom has grown and spread far and wide and in this city was so generally observed that everything in the shape of a white carnation was sold, as were also many other white flowers that were used after the carnation supply gave out. The conductors and motormen on all the street cars were each presented with a carnation to which was attached a white ribbon inscribed with the tribute paid to his mother by Abraham Lincoln, "All that I am or expect to be I owe to my sainted mother." The furnishing of this order was in the hands of Frank Polites and called for over 10,000 flowers. On account of the great demand prices stiffened considerably, the best grades of white carnations ranging from $4 to $5 per 100, where before they sold as low as $2 to $3 and were very draggy at that. There are quantities of other flowers, with but little demand. Roses are especially plentiful and prices rule low. Eastern American Beauties are arriving of very good quality. The locals hold their own as yet, but two or three hot days, which are due at any time, will give the imported stock a clear field. Sweet peas, stocks, gilliflowers and Spanish iris are good sellers and are to be had in quantity. Lily of the valley is in fine shape and plentiful. Orchids and gardenias are in good demand and not at all plentiful. Cattleya Mossiæ and C. Schroederiana are the only sorts now in.

The Henry F. Michell Co. is having an exceptionally busy season. Every branch of the business has been worked to the limit. Asters, Semple's Branching, Primula obcorica grandiflora and P. Chinensis are offerings of interest to florists at present.

The Century Shop is displaying a splendid stock of Florentine and American garden pottery. M. Battels is one of the largest importers of these garden ornaments in the country. Bay and box trees are also seen in large assortment.

Chas. McKeegan has now offered his creditors 50 per cent in cash, the former proposal being 25 per cent cash and 25 per cent secured notes. Wallace Faust and Chas. Moltby, his store managers, resigned their positions last Saturday evening.

The Leo Niessen Co. is making a specialty of young pot roses and selling large quantities of Kaiserin, Richmond and Bridesmaid.

Joseph Stern & Co., dealers in florists' supplies, 125 North Tenth street, have had a petition in bankruptcy filed against them. K.

Boston.

A GOOD WEEK

Wholesalers and salesagents report a good week and back up their statement with an empty market at the finish of the week's business. Prices have held well in most cases and in others have advanced firmly. Owing to the weather, fluctuations are daily occurrences and in the specialty classes the dissatisfaction is widespread. Gardening work is completely frustrated by the contrary weather and the present average is about one fair day in which to accomplish six days' work. The market is in an agreeable position. Although short of certain lines there is enough of others to balance but not enough to create surpluses of any significance. Carnations are the most important factor. Prices are not what they should be but in view of the season's setbacks the situation is accepted without reluctance. Best carnations are bringing $3 and miscellaneous stock anywhere from $1 up. May 9, Mother's day, brought out quite a demand for white carnations. American Beauty roses from local growers are plentiful but rather handicapped by a wholesale invasion of other markets who are sending hundreds to the commission men. Killarney from present appearances is finishing the season early and at present is in very poor shape. Some of the finest Richmond of the season is now coming in. Chatenay is in the best condition seen this season. Violets are over and their place is well filled by cattleyas and gardenias. Sweet peas though limited in variety and not of unusual quality are bringing top prices. Preparations have begun in all the stores for Memorial day.

NOTES.

A number of the stores showed entire windows massed with American Beauty roses during the week, displays which are rather unusual in this city. These dealers took advantage of the inducements held out by the larger markets, and Philadelphia and New York goods in good quantities found an outlet in this city to good advantage.

Sydney Hoffman is supervising extensive alterations at his greenhouse establishment at Mount Auburn, formerly the Dee estate. A new house is planned to run lengthwise with the street. This will be the most attractive of all the houses and is to be planted to carnations.

Work on Thos. Roland's two new houses is rapidly progressing and they will be completed early to provide the necessary accommodation for his fall stock.

Pierce Bros., of Waltham, are in the front with early summer specialties, the first of which they are now showing being a fine line of selected gladioli.

The Richmond roses, now being cut from the J. A. Budlong plant in Rhode Island, are perhaps the best seen in the local market this season.

Visitors: J. J. Karins and E. J. Fancourt, Philadelphia, Pa. B.

Baltimore.

STOCK PLENTIFUL.

There was a variety of weather last week, varying from freezing to temperatures up in the eighties, and with a continuance of the heavy windstorms which have characterized the season, and especially heavy from the south. Vegetation, however, remains backward and the flowering date of many outside species is much behind the average. Flowers are abundant, especially roses, which are in excess of demand, while carnations are just about equal to the requirements of the market, white some days being rather short. This is in marked contrast to last year's experience at this time, when there was so great a glut that they could hardly be given away. Sunday, which was Mothers' day, evoked some little additional business, but the influence was not great. Doubtless as the sentiment of honoring the mothers of the land by some such outward token of respect and reverence as the wearing of a white carnation becomes more general, its influence on the carnation market will be more marked. Some of the daily papers were responsible for the statement that white carnations were absolutely not to be had, but this was not true.

SHIPPING TRADE GROWING

The Florists' Exchange finds on settling its accounts for April that the month was among the largest in point of business ever done by that institution. The shipping trade to outside towns and cities grows steadily, and this point is being looked to for daily as well as occasional supplies of flowers which were formerly secured from other markets. Enlarged transportation facilities which are promised by the railroad companies will tend to the expansion of the business.

NOTES.

The Gardeners' Club held its meeting May 10 and received as contributions to the decorations of the walls of its meeting room handsomely executed portraits of its former president, Wm. McRoberts, Jr., and its former financial secretary, William A. Ekas. Other deceased officers will be remembered by similar portraits. One of Robt. J. Halliday, the founder of the club and its first president, has long adorned its meeting place.

Miss Matilda Held, whose health for some weeks has been impaired, is seeking restoration by the sea at Atlantic City. S. B.

ROCHESTER, N. H.—E. A. Coxson is to build another greenhouse near his residence this spring.

SO. PARIS, ME.—Ernest P. Crockett is planning to build a greenhouse on Porter street, where he will go into the florist business.

WILKESBARRE, PA.—The city's campaign against billboards has resulted in an ordinance being passed imposing penalties upon any person erecting or posting bills to any object within 500 feet of any public building, park or playground. An appropriation of $1,380 has been made for the purchase and care of trees.

MARKET QUIET.

Business last week was somewhat quiet, perhaps the unseasonable weather keeping people in their homes. The supply of cut flowers was not large, so that really no stock went to waste. Bedding plants this year are very backward, the more tender ones like coleus, achyrantes and alternanthera looking miserable. It will take a lot of warm days and nights to grow them into bedding-out shape. There hardly seems to be as much bedding stock grown as last year, and it certainly will not be as good; and if there is a good demand, a scarcity of bedding plants is sure to occur.

NOTES.

The executive committee of the Gardeners' and Florists' Club has completed arrangements for holding monthly floral exhibitions in the club rooms. A schedule of plants, cut flowers and vegetables was drawn up which, it is expected, should suit every member, and we look forward to a large entry list. The first show will take place on May 17.

Several of the private gardeners have started off for themselves into landscape gardening and are doing well; there is a good demand for work of this kind. The nurseries are doing a big trade this year; the planting season will be a long one this spring, as there is no sign of any foliage starting yet.

Several large consignments of trees, shrubs and vines from Holland have been auctioned off lately. One lot consisted of thousands of roses only. How many will there be in bloom next year of these?

A plant of Dendrobium Wardianum, grown by Geo. Pascoe, president of the Gardeners' and Florists' Club, shows 98 flowers, all open at the same time.

LUCK.

The Prickly Pear.

ITS COMMERCIAL POSSIBILITIES.

In consular and trade reports communications have appeared on the utilization of the prickly pear, especially in Australia, as to whether it should be eradicated or cultivated. An article in the East African Standard, transmitted by Consul Arthur Garrels, of Zanzibar shows that the question of cultivating the prickly pear for its commercial possibilities is now being earnestly discussed in south and central Africa.

While the British and South African Export Gazette, which had drawn attention to the pear for its good qualities, claims that it is suitable for the production of soap, spirits, cattle food, unbreakable domestic utensils, linoleum substitute, sugar, leather, etc., the manufacture of paper therefrom would seem to be the only case wherein actual experiments have been made, the Gazette stating that paper from the prickly pear has already been manufactured in Port Elizabeth. It says that if the prickly pear were used exclusively as a substitute for wood pulp the field is almost unlimited, for there is no likelihood of there ever being a shortage of supplies.

EVANSTON, ILL.—Miss Isabel Bietly, a teacher at the high school, and a friend whose name has not been divulged will start a violet farm at Lawton, Mich. Miss Bietly will superintend the erection of the greenhouses and will do most of the work in connection with the growing herself.

SAN JOSE, CALIF

New York Seed Bill.

The appended is Callan's bill to amend the agricultural law in relation to inspection and sale of seeds. The bill has passed the assembly and senate and is now before the governor for his signature, and those who have followed the matter closely think there is no doubt that it will meet with his approval. If the governor signs the bill it will go into effect July 1, 1909:

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1, Chapter 9 of the laws of nineteen hundred and nine, entitled "An act in relation to agriculture, constituting chapter one of the consolidated laws," is hereby amended by adding at the end thereof a new article to be article sixteen thereof, to read as follows:

ARTICLE XVI.

INSPECTION AND SALE OF SEEDS.

Sec. 360. Inspection and sale of seeds.—No person shall sell, offer, expose or have in his possession for sale for the purposes of seeding, any seeds or cereals, grasses, clovers or forage plants in quantities exceeding one pound, unless every receptacle, package, sack or bag containing such seeds, or a label securely attached thereto, is marked in a plain indelible manner as follows; and said marks shall be on the receptacle, package, sack or bag itself if there is more than ten per centum of injurious foreign seed:

a. With the full name and address of the seller.

b. With the name of the kind or kinds of seeds, except in the case of mixtures prepared for special purposes, when so labeled, and the name of any foreign injurious seeds present to the extent of five per centum or over by count and the name and per centum of the following adulterants, if present, which adulterants shall not be taken into consideration when estimating the five per centum herein above referred to:

Yellow trefoil in red clover.

Yellow trefoil, burr clover, sweet clover or dodder, in alfalfa.

Canadian blue grass in Kentucky blue grass.

Meadow fescue or rye grass in orchard grass. Yellow trefoil in alsike clover.

c. With the claimed per centum of purity of the sample by count which shall be not more than five above the per centum determined by official examination.

Sec. 361. Samples, publication of results of examinations.—Samples of seed shall be taken in duplicate, both samples to be sealed promptly and one to be tendered and, if accepted, to be delivered at the time of taking to the person apparently in charge and a receipt taken therefor, unless refused. No action shall be maintained for violation of this statute if the seed was not sold or exposed for sale. The commissioner of agriculture is hereby authorized to publish from time to time the results of seed examination, together with the names and addresses of dealers from whom the samples examined were taken.

Sec. 2. This act shall take effect July one, nineteen hundred and nine.

[Without reference to other items, the last part of section 361 is open to criticism in that the publication of results of these tests is authorized under the law, but no requirement is made that the commissioner first notify the seedsmen of the fact that the said tests are not commercial. It was conceded at the hearing of the seedsmen before the Interstate and Foreign Commerce Committee at Washington in April, 1908, that it was unfair to make publication of any tests reflecting on the seedsman without giving him prior notice that such publication was to be made, and opportunity to offer a reasonable explanation.—ED.]

NOW READY 1909 EDITION **Trade Directory.**

Vaughan's Lilium Harrisii

Careful Selection of Both Plants and Bulbs.

WITH a good crop of **"Harrisii"** in sight, it would be well for growers to remember that Easter comes on March 27th in 1910, which makes it necessary to force a lily that you can depend on getting in on time. Remember, while we do not claim that our **"Harrisii"** are absolutely free from disease, or that every bulb will produce a perfect plant, we do claim that our grower's efforts in the way of spraying and rogueing are producing results, our stock now being freer from disease than ever before and of genuine **"Harrisii"** type — in fact, the best general crop grown on the Island of Bermuda.

ANNOUNCEMENT

JOHN SCOTT, Rutland Road, Flatbush, N.Y.

The business of the late JOHN SCOTT will continue under able management. The reputation of the house for the finest Plants and Cut Flowers will be maintained. The patronage and confidence of the public is solicited.

This opportunity is taken to gratefully acknowledge the kindness and sympathy of all for his family, and to guarantee that the same care and enterprise characterizing the record and reputation of Mr. Scott in the past will be continued.

The Longevity of Seeds.

A study has been made of a large number of seeds ranging from fresh seeds to those known to be 60 or more years old, to determine their germination, according to A. J. Ewart in the proceedings of the Royal Society of Victoria. In all more than 3,000 tests were made, embracing many species and genera. The results of the tests are given in alphabetical lists, and with these are incorporated all the previous records that the author was able to verify or correct. In summarizing the tabulated results, the author divided seeds into three biological classes, according to their duration of life under optimal conditions. These are short-lived or microbiotic seeds whose duration does not exceed three years, mesobiotic seeds which may last three to 15 years, and macrobiotic seeds which may last from 15 to over 100 years. In an appendix Miss Jean White gives an account of experiments in which she found that hard seeds which are incapable of imbibing water owe their failure to take up water to the presence of a cuticular layer, and that when this is removed or penetrated either by mechanical means or the action of acids, the seeds swell rapidly, and if their vitality is sufficient, germinate quickly. It is claimed that Becquerel's conclusions that the impermeability of the coats of macrobiotic seeds as a gradual result of their aging are incorrect. The impermeability is due to the presence of a cuticle developing during ripening, and its presence or absence determines whether a seed will or will not have a long life in the soil, but not whether it will have a long life when preserved in dry air. Macrobiosis is the result of a biological adaptation of the protoplasm, in which an impermeable cuticle plays a merely accessory or aiding part.

Chinese Beans for England.

Consul Roger S. Greene, of Dalny, was informed by the Hitsui Bussan Kaisha that they have received a trial order from England for 1,300 tons of Manchurian beans, the shipment going to Liverpool. The consul adds:

"It is understood that the beans are to be used as cattle feed. If this first shipment proves a success, it is expected that other orders will be regularly forthcoming. This is an event of considerable importance to this city, as hitherto there have been no exports from Dalny to any other countries than Japan, China, and Korea, and ships bringing imports from Europe and America have been obliged to go away empty. If outward cargo can regularly be obtained here by foreign steamers the conditions for shipping to this port from America and Europe should also greatly improve. Rates might not be greatly affected, but at least more frequent sailings might be looked for. At present normal imports alone are not sufficient to secure regular connections."

HARTLAND, N. Y.—White Bros. are building a new greenhouse.

BOSTON, MASS.—About 200 landscape gardeners, architects and artists met, May 11, under the auspices of the National Academy of Art, the object of the meeting being to form a national art federation. The convention was presided over by Chas. L. Hutchinson of Chicago, first vice-president of the National Academy of Art, and was addressed by Senator Root of New York.

Wm. Hagemann & Co.

Hudson Terminal Building, 30 CHURCH ST.

NEW YORK

The business formerly carried on by Mr. Wm. Hagemann, (who died on April 3rd, 1909) *is being continued* at the same address as heretofore under the management of Mr. PAUL KÄSE (for many years associated in the business with Mr. Hagemann) and Mrs. WM. HAGEMANN.

Fischer's Grand Freesia

PURITY

The Unequalled, White Decorative Freesia :: ::

Send in your orders early if you want to secure the large sizes. I am booking large orders now for them and will have to refuse orders for Mammoth, although I will have more than other years. My stock is absolutely pure as great pains are taken to remove any rogues that may appear. All seed pods are removed, avoiding all danger of mixture, as **Purity** does not come true from seed. Dealers getting their stock from me will always be sure of getting the purest stock.

SOUTH FREEPORT, ME.—J. J. Turner is preparing a large vegetable garden in connection with his Casco Castle Greenhouses.

ACCORDING to experiments carried out at the Maryland Experiment Station, commercial fertilizers plowed down are more satisfactory than if used as a topdressing on prepared land, the ratio being about 198 to 174.

Cucumbers.

Tomatoes and cucumbers do not require the same treatment. It has been found that tomatoes do best if not syringed at all, while with cucumbers we must use water freely on the foliage, both to keep them growing vigorously and to keep down red spider, their great enemy. Cucumbers flourish in a high temperature which means we must correct the air by adding ample moisture. At times it it best to dampen the walks several times a day. For pollination, bees are the most efficient method; to compel them to give attention to our crop the hive should be inside the house. This will encourage them to come out and work in bad weather.

The general mistake made in cucumber growing is a lack of fire heat. Lettuce growers generally are too economical with coal; just as soon as freezing temperatures are past they stop firing. Now cucumbers will not only stand still whenever the temperature drops below 60°, but they are actually hurt during cold rainy spells without heat. It makes no difference whether the rainy spell occurs in March or June—keep up the temperature. Cucumbers, like tomatoes, require ample feeding and generally phosphates and potash are needed to balance up old greenhouse soils. Few dealers realize the enormous amount of water needed by a house in full crop and very often we allow the vines to suffer for want of water, down in the lower strata. What water is given never reaches the lower roots. To correct this, dig in with a spade or trowel and find out the exact condition. MARKETMAN.

Tomatoes.

At this time suckering the in-door tomatoes is the all-important job. They should not be neglected as the side shoots draw a good deal of strength, but most of all, they have a tendency to make the newly set fruit drop, or to prevent setting of fruit altogether. Some operators still stake them under glass; we much prefer the string. Again some tie to the strings, that is, they use short pieces of twine or raffia and tie the plants to the strings same as to a stake. This seems rather unnecessary as twisted vines do fully as well and the operation is so much quicker. A handy person can sucker and twist the plants with one move.

TO THE TRADE

HENRY METTE, Quedlinburg, Germany.

GROWER and EXPORTER on the VERY LARGEST SCALE of all CHOICE VEGETABLE, FLOWER and FARM SEEDS. (Established 1787.)

HENRY METTE'S TRIUMPH OF THE GIANT PANSIES, (mixed) the most perfect and most beautiful in the world, $5.00 per oz., $1.50 per ¼-oz., 75c per 1-16 oz. postage paid. Cash with order.

All seeds offered are grown under my personal supervision on my own grounds of more than 3,000 acres and are warranted true to name, of strongest growth, finest stocks and best quality.

I ALSO GROW LARGELY SEEDS ON CONTRACT.

List of my novelties in flower seeds for 1908 sent on application.

In late spring and summer we simply snap the cluster of bloom with the finger or tap it with a pencil to scatter the pollen. The best time is a sunny morning between 10 and 12. It pays to do this as we get early fruit and perfect specimens.

When putting up new wires, be sure that each section is self-supporting; for if all the load pulls on the ends either the vines will break or the ends of the houses draw in under a heavy load. To fasten the strings to the lower part some use a screw wire which they screw into the ground like a cork screw; others bury wire hooks when the plants are set. In an emergency we have tied directly to the plants, with a loose tie, and could find no fault with this method. American flax twine will answer every purpose and is cheaper than manila; we mean such twine as farmers use for binders. Do not fail to supply bone meal liberally, supplemented with either wood ashes or sulphate of potash so that the proportion stands about 8 per cent phosphate, and 12 per cent potash.

While the plants are not in heavy fruit we hoe them regularly once a week and supply only enough moisture to regulate the air in solid bed houses. When the fruit commences to swell, we topdress with manure, fresh or old as we may have it, and from then on water is needed in quantity. However, after plants have run on the dry side, water should be increased gradually, as an undue amount all at once will cause the young fruit to split. The grower should bear in mind that black rot of the fruit is caused by a lack of water at the root. The plain green leaf is always a sign of too much water; the bluish tint, of too little water; and a metallic lustre, all over, stem and leaf, indicates proper fruiting conditions. Those who force Comet, Stirling Castle or Frogmore should feed liberally to get fine size and meaty fruit. With American kinds we may go more sparingly to prevent over-weight. MARKETMAN.

Solid Beds Versus Benches.

FOR LETTUCE AND TOMATOES.

The difference of opinion in connection with the growth of crops upon an ordinary solid bed or upon raised benches with heating pipes beneath, continues to be an interesting one with greenhouse men. Many establishments have both styles and get good results from each. Like many other problems relating to horticulture, conditions enter largely into the question, of which some are, the crops to be grown, value of lumber to renew benches, liability of the soil to become infested with disease spores and insects. The items herein noted have been gathered from the work with various crops.

The solid bed, running through the center of the house, was eight feet six inches wide and two feet deep. The benches were two feet and six inches above the floor with hot water pipes beneath. They were three feet eight inches wide, six inches deep, and were placed within eight inches of the glass sash on the side walls. Six inches of the surface soil of the solid bed was renewed each year. All of the soil on the benches was taken off and replaced by new soil annually.

With regard to diseases, it cannot be said that there were any more on solid beds than on benches. Regarding insects, however, the nematode worm got into the solid bed planted in tomatoes and lived over from year to year, usually interfering a good deal with the second crop. Data on crop of tomatoes and lettuce are available for comparison of this work.

Tomatoes—The average of four crops per plant on benches was 10.4 fruits, weighing two pounds three ounces. The average on solid beds was 13.1 fruits, weighing two pounds two ounces. The fruits ripened on both beds at the same time and there was practically no real difference in results except that the fruits from the benches

were slightly larger than the others and the plants on solid beds continued to produce fruit later in the spring than did those on benches. The solid bed was easier to water than the benches.

Lettuce—The records show that while the midwinter crop was usually about equal on the solid bed and bench, the spring crop was heavier on the solid beds.—Bulletin of the Maryland Experiment Station.

Prices of Indoor Fruits and Vegetables.

The prices of indoor vegetables at leading points May 8 were as follows: New York—Cucumbers, 50 to 75 cents per dozen; mushrooms, 25 to 45 cents per pound; mint, 30 to 40 cents per dozen bunches; radishes, $1 to $2 per 100 bunches; rhubarb, $1 to $4 per 100 bunches; tomatoes, 10 to 20 cents per pound. Chicago—Cucumbers, $1 to $2 per dozen; head lettuce, $1.50 to $2.50 per hamper; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 40 to 60 cents per dozen bunches; grapes, Gros Colmar, 75 cents to $1.75 per pound; peppers, 30 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound. Cincinnati—Cucumbers, 85 to 90 cents per dozen; mushrooms, 50 cents per pound. Boston—Cucumbers, $5 to $6 per box. Kansas City—Cucumbers, 75 cents to $1.25 per dozen.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N. Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June 9-11, 1909

VISITED CHICAGO: ——— Ebbinge, of Ebbinge & Van Groos, Boskoop, Holland.

HOPEDALE, ILL.—Harry Squires and Joseph Hatlinger of Green Valley have purchased the Hopedale Nurseries.

PEONIES.—Arthur H. Fewkes, Newton Highlands, Mass., secretary of the American Peony Society, is anxious to hear from peony growers as to the time their plants will be in bloom this season. This information is desired in order that the date of the annual convention and exhibition of the society, which will be held at Queens, N. Y., next month, may be fixed to suit the greatest number.

American Association of Nurserymen.

ROCHESTER CONVENTION, JUNE 9-11.

The following transportation arrangements have been made for the convention of the American Association of Nurserymen to be held at Rochester, N. Y., June 9-11: For the accommodation of those coming from Kansas, Oklahoma and the southwest territory, it is proposed to provide a special Pullman sleeper to run through from Kansas City to Rochester, this car to leave Kansas City via the A., T. & S. F. at 7:30 p. m. Sunday, June 6, arriving in Chicago at 9:15 the next morning. Leave Chicago via Michigan Central, Niagara Falls route, at 3 p. m., arriving Rochester at 8:50 Tuesday morning, June 8; stop enroute being made at Falls View station to afford a most comprehensive view of Niagara Falls from this point of vantage.

You are cordially invited to join the special car party to go from Kansas City as above indicated, and I will thank you to write direct to C. C. Merrill, traveling passenger agent, Michigan Central R. R., Tenth and Walnut streets, Kansas City, Mo., for your sleeping car reservations, indicating the number in your party and same will be made for you.

Delegates from Illinois, Iowa, Nebraska, Wisconsin and Minnesota are also requested to time their arrival at Chicago on Monday, June 7, to go together on Michigan Central 3 p. m. train the same date, thus adding much to the social features of the trip. Those joining the party at Chicago should write direct to L. D. Heusner, general western passenger agent, Michigan Central, 236 Clark street, Chicago, for their sleeping car reservations, indicating the number in the party, and he will make assignments, also give all further information regarding rates, etc.

This is to be one of the most important meetings in the history of the association, and in view of the fact that Rochester is an ideal convention city a large attendance is desired and we feel is positively assured, therefore do not fail to come.

Ottawa, Kans. F. H. STANNARD.

Trees and Shrubs for the Water Side.

The beauty of a lake or stream depends largely on the nature of the plants which fringe its margin, and the arborescent growth plays an even more important part than that of herbaceous character, for well-placed and suitable trees and shrubs break up the margin and offer a succession of fresh views, instead of allowing the eye to take in the whole of the water at once. While, however, it is highly essential that tree and shrub life should be found in the vicinity of a lake, it ought not to be overdone, and the various plants used should be so arranged that good views can be obtained of ample sheets of water, and also that each tree or group of trees opens out a fresh vista.

Although most kinds of trees will thrive on the banks of lakes where the ground is not marshy, some do not associate well with water. Heavy-looking trees, as a rule, are not desirable, especially if planted in quantity, as they produce too sombre an effect. Those of a light and graceful outline have greater attractions, says a writer in The Garden, while some of those of a fastigiate or columnar habit may be introduced successfully. Trees of free, pendulous habit are popular for the work and have much to commend them; but weeping trees of more or less formal outline, such as some of the ashes, grown in umbrella fashion are not appropriate. The reflection of suitable trees in the water is part of their value, weeping and fastigiate trees being very effective, while the foliage possesses the advantage of having bright golden bark. It is known as Ramulis Aureis. Another good variety of the Babylonian willow is Salamoni, while the pendulous variety of S. purpurea is of particularly elegant appearance. S. elegantissima is also a pendulous willow, while S. fragilis and its bright-barked variety Basfordiana may also be planted. The forms of S. alba vitellina, with red and yellow bark, make delightful pictures, the color being most brilliant when they are cut over annually. A variety with red stems known as britzensis is also ornamental.

The various alders are useful subjects, the golden-leaved form of Alnus glutinosa being effective, while the cut-leaved varieties of the same species, known respectively as Imperialis, Incisa and Laciniata, are pretty. A. incana bears fine foliage and large fruits, while the variety Ramulis Coccineus is conspicuous by reason of its red stems. A pretty Japanese species is known as A. firma. It is uncommon and worth planting extensively for ornamental work. The various poplars may also be used. The fastigiate varieties, such as the common Lombardy poplar and Populus alba pyramidalis are useful to form groups in the vicinity of water, where they stand straight and sentinel-like among other trees and produce a similar reflection in the water. The common and American aspen each give us pendulous varieties. They form ornamental trees and are very curious in spring when covered with their long, pendulous catkins. Populus alba and its variety nivea and P.

WATERSIDE PLANTING IN BROOKLYN, N. Y.

colored bark of various subjects makes them very desirable.

Should the margins be of a marshy nature, the various willows, alders and poplars will be quite at home. The most popular willow of all is Salix Babylonica (the common weeping willow). Its light and graceful branches hang in streamers many feet in length, and are clothed with the daintiest of green leaves. An uncommon variety of equal merit regarding habit and canescens are remarkable for their silvery leaves, while P. deltoidea aurea has golden foliage. The pterocaryas may be planted in damp ground, where they will grow rapidly and form fine foliage. The deciduous cypress (Taxodium distichum) is of stiff, fastigiate habit while young, and is effective either during summer while the leaves are green, or throughout autumn when the foliage is a rich brown. For the banks of lakes or streams, where the

stems will not be continually wet, but where roots can get to the water, lots of trees will thrive, and such things as red and white thorns, double-flowered cherries, Pyrus floribunda, P. spectabilis, Catalpa bignonioides and its golden variety and the various robinias may be planted. Should high ground occur in the vicinity of water, a well placed group of silver birches may be introduced with success, the reflection of the white trunks in the water being very pretty.

Shrubs of various kinds may be planted about the margins of lakes or streams, such as diervillas—better known, perhaps, as weigelas—double-flowered gorse, rambling roses, double-flowered blackberries, golden-leaved elders, the silver-leaved form of Salix repens, Berberis stenophylla, Rhododendron ponticum, tamarix in variety—particularly T. Chinensis, which is of very graceful outline, and T. pentandra, which is remarkable for its profusion of pretty rose-colored flowers in summer, Spiræa Aitchisonii and hosts of other plants. Although the selection is somewhat limited where the ground is naturally wet, there is practically no limit of material for those situations where the plant can be placed well out of the water but so that the roots can grow through the bank and into the water. For sheltered positions bamboos may be introduced, the graceful, wand-like branches being charming when at their best. They must not, however, be planted indiscriminately.

FLORISTS' CLUB SPORTS.

The Florists' Club had its regular meeting which was well attended and business of importance transacted. The large attendance was due to the fact that the notices said an entertainment would be furnished by the committee; well, it was. It started with a blindfold boxing match between Messrs. Hubar & Schorn which was good and resulted in a draw. The next event was a show in itself. Count Siegfried, the German lion and Silver Stuntz, two pinweights, endeavored to wrestle C. Baumbgartner, the Hebrew giant, the two to throw the Hebrew, and as they had their training in Palmer's basement, it is unnecessary to say that they won in about 10 minutes. Bob Scott was referee. The third event was a wrestling match between Wesley Miller and E. Bauers. Miller had two falls to his credit in four minutes 30 seconds. Wm. Mack was referee. Event No. 4 was a boxing match between Curley Supples, middleweight champion of Erie county and his sparring partner, Wm. Mack. The decision from Referee Slattery was in favor of Supples and had the referee had a striped short on the decision would have been different.

Event No. 5 was the boys' time and consisted of a pie-eating contest, real blackberry pies being used. The contestants having their hands tied, and again Palmer boys were in the ascendancy. Stuntz licked the plate clean. Scotts Cisco left a piece on the side and Count Siegfried was slow in getting it all off the table, so the prizes were awarded as above. Bob Scott judged and tried the pies. The entertainment was favored by several musical selections from Thomas Tobin, accompanied by A. Fisher on the piano. Albert Keitsch also gave some piano selections. The evening ended with a progressive pedro party, where ex-President Sandiford got first, Thomas Tobin second, Charles Hewson third and London Sewell got the prize never sought after but always won by someone—the booby. He had to work hard and beat Ed. Walters by two points. It was a very enjoyable evening and all went home pleased with the committee's efforts.

GEO. A. KUHL, Wholesale Grower. **Pekin, Ill.**

Cleveland.

Business the past week has been exceptionally good, all stock cleaning up nicely at prices slightly in advance of those of the previous week. Carnations especially have sold up clean every day, and local wholesalers could only keep up with the demand by calling upon growers to pick everything. Mother's day, May 9, was celebrated by the public generally, as was evidenced by the call for white carnations which sold up clean. Roses of all kinds sold better than in previous weeks, although prices were about the same. Orchids find a ready sale, and the quality was never better in the shipped in Eastern stock. Smilax is again plentiful and the quality good. Last week several growers announced that their crop of peonies, would be in early, but the weather for the past two days has been cold and wet, which will greatly retard their progress. Lily of the valley and daffodils have not been much in demand. Pansies, daisies, calendula, snapdragon and lupins are all good, and sell quickly.

Miss Symes, formerly with The Jas. Eadie Co., and Milford Parks, takes Miss Wood's place at Ditto's Citizens' building. Miss Wood goes to Cincinnati.

Visitors: F. Farney, of M. Rice & Co., Philadelphia, Pa.; A. Miller, Vaughan's Seed Store, Chicago; Miss Martin, Canton. C. F. B.

Always mention The American Florist when you order stock. : : :

NAPPANEE, IND.—C. A. Doswell contemplates building a large greenhouse at this place.

WORCESTER, MASS.—Business continues good since Easter, consisting chiefly of funeral work. The week ending April 24 Lange had the Jefferies wedding, Brown card party and board of trade banquet, each of which called for a large number of cut flowers.—R.

OMAHA, NEB.—In the recent damage to the greenhouses here by hail, as already described in THE FLORIST, it is computed that the value of the glass alone was well over $10,000.

THE BELFAST CHRYSANTHEMUM

The Queen of Winter.

The most profitable 'mum in sight for Christmas and later. Easily sells for one third more than Nonin or any other variety. Size, color and keeping qualities is what does it. Can be had all through the winter by propagating and planting late. They are fine to follow early 'mums; of the very **largest size.** Color, light-pink to cream-white. Perfectly healthy and easy to grow. A seedling of W. H. Chadwick and Western King.

Extra large cuttings from soil or sand **$2.50 per Doz; $18.00 per 100.** Prepaid.

WILLIS E. HAMILTON, Belfast, Me.

Providence.

TRADE GOOD.

Stock of roses and carnations has shortened the past week and both advanced considerably, roses going up one and two cents and carnations one cent higher than last week. Business was good, but the shortage was owing to an off-crop condition. Flowers reached a lower level of wholesale price earlier than usual this year probably owing to good weather conditions and the subsequent large cut. Maidenhair fern is scarce for the present, as is smilax and Asparagus plumosus. The Rhode Island greenhouses are selling off rapidly the stock of cut greens and ought to be cleaned up by the week-end. Mothers' day last Sunday caused an increased call for white carnations for boutonnieres; this day gives indication of becoming an important flower festival. Ferns for bouquets will be shy as usual for Memorial day, and the retailers will have to hustle to obtain a supply; $2 per 1,000 is the quotation. Marguerites and sweet peas are finding a ready sale, and are filling the demand that the violet held in the winter.

Fred Greene has left the Aldrich estate and assumed the care of the city parks. Mr. Greene's work at Warwick is a lasting monument to his sense of detail and order, and he leaves the senator's grounds in splendid condition. With proper care they are destined to become the show place of Narragansett bay. M. M.

Geraniums, Dahlias and Bedding Plants

We have one of the most complete collections of Geraniums in the country, containing every color and type found in the Geraniums, at $2.00 and $3.00 per 100. Every one of our 70 Standard Varieties are bread and butter winners, and among our 34 New Varieties of Special Merit are some that are going to fix the standard in the future. Every one is a gem, not high in price, only $4.00 and $6.00 per 100.

Our Novelties should, coming as they do from the leading introducers of the world, represent the highest development of Geraniums at the present time. A collection of 100 varieties, our selection of 1907 and 1908 Novelties, will be sent for $10.00.

Special offer of 1000 good strong plants, from 2-inch pots, our selection of 20 distinct varieties from among our Standard and Newer Varieties for $15.00, cash. From 3-inch pots, $3.00 per 100; $25.00 per 1000.

Cannas Strong plants from 3-inch pots, J. D. Eisele, Egandale, Alphonse Bouvier, Mme. Crozy and Florence Vaughan, $4 00 per 100; Jean Tissett, President Meyers, Louisiana, Pennsylvania, $5.00 per 100.

Dahlias We have one of the finest collections in the country of good distinct commercial varieties, at $2.00 per 100 and up for plants ready for shipment. Then we have Jack Rose, Virginia Maule, Big Chief, Rose Pink Century, Fringed Twentieth Century, Rebecca Mayhew etc., at 50c each; $5.00 per doz.; $35.00 per 100. We will send 1000 in 20 good distinct cut flower sorts, our selection, for $18 50.

See issue of April 24th or our wholesale catalogue for complete list of bedding plants.

GEO. M. EMMANS, **Newton, N. J.**

THE seventeenth national irrigation congress will be held at Spokane, Wash., August 9-14, inclusive.

BALTIMORE, MD.—Hilpert & Hammen have taken out a permit to build a greenhouse on the Belair road near Erdman avenue.

Everybody Talks About It!

LIKE THE BEE

A Prosperous Florist Is Never Idle.

☞ We have plants to sell. So have 100 or 1000 others. ☞ But we have quality and prices that few can offer.

☞ An immense stock of **Bedding Plants** is now ready. Every hole and corner full for immediate shipment.

Per 100
Geraniums, 4-in., S. A. Nutt, dark crimson; John Doyle, Mme. Thibaut, pink; Jean Viaud, double pink and single white; Bishop Wood, red; and other varieties ... $7 00
Scarlet Sage (or Salvia), the true Clara Bedman or Bonfire. Ours is the true medium tall genuine variety; deep red, brilliant flowers; a constant bloomer, so much admired in the capital cities of Europe and America. The seeds of this famous variety were gathered by myself in Zurich, Switzerland, the home of Salvia. Price 4-in. pots. 8 00
Ageratum, best blue, dwarf varieties, 4-in., in bloom 7 00
3-in. pots 3 00
Heliotrope, best blue, dwarf varieties, 4-in. in bloom 7 00
Begonia Erfordi, pink variety, 4-in 8 00
Begonia Vernon, newest strain, the so well known dark variety, of our own importation. Seeds selected from the best specimen plants by myself during my trip in Switzerland and France. On that account these varieties thrive well in the hottest climate, exposed direct to the heat of the sun in July and August; a constant bloomer: therefore it is very valuable as a bedder, and in many instances takes the place of Geraniums, etc. 4-in. pots 8 00
Begonia Flambeau, or Octavie, valuable for window boxes and vases; their fine waxy foliage gives them a beautiful appearance. 5¼-in. pots .... 2 00 per doz.
4-in. pots .... 1 00 per doz.
Fuchsias, in bud, 4-in 6 00
Petunias, double, assorted, 4-in 7 00
Lantanas, assorted, 4-in 7 00
Nasturtiums, assorted, 4 in 6 00
Stock, German Ten Week 7 00
Vinca Variegata (Periwinkle), 4 in 12 00
Cobea Scandens, fine blue, bell-shaped flowers; climbing vine, grows 30 to 50 feet in one summer; blooms far into November; nicely staked up, 4-in. pots 8 00

SMALL PLANTS.

Petunias, California Giant, 3-in. pots 4 00
" Inimitable (dwarf) 2½-in 3 00
Verbenas, assorted, in bud, 2½-in 3 00
Coleus, Verschaffeltii, Golden Bedder and Queen Victoria, 2½-in. pots 3 00
Coleus, fancy leaved, 2½-in 4 00
Tagetes, or French Marigold 3-in 3 00
Centaurea Gymnocarpa or Dusty Miller 2½-in 3 00
Parlor or **German Ivy,** 2½ in 3 00
Candytuft, assorted, 2½-in 3 00
Salpiglossis, 2½-in. to 3-in 3 00
Lobelia Compacta, Trailing and Crystal Palace Blue 3 00
Kenilworth Ivy, 2½-in 3 00
Tradescantia, two best colors, 2½-in 3 00
Thunbergia or Black Eyed Susan, 2½-in 3 00
Sweet Alyssum, Little Gem, 2½-in 3 00
Cuphea or Cigar Plant, 2½-in 3 00
Vinca Variegata (Periwinkle), 3 in..$4 00 to 5 00
Asparagus Plumosus, 3 in 3 00

Per 100
Cosmos, 4 best early varieties, made up 3 plants in a pot $4 00
Summer Chrysanthemums, 3 to 4-in. pots 5 00
Asters, Victoria, German, 5 best sorts 3 00
Honeysuckle, large, 6-in 50c
Rose Bushes from cold frames (not in bloom). Crimson Rambler, D. Perkins, Lady Gay, 5½ to 6-in. pots ...... 25c to 30c each

WIETOR BROS.,
51 Wabash Avenue. Chicago.

The Belfast Chrysanthemum, The Queen of Winter. The most profitable 'mum in sight for Christmas and later. Easily sells for one-third more than Nonin or any other variety. Size, color and keeping qualities is what does it. Can be had all through the winter by propagating and planting late. They are fine to follow early 'mums; of the very largest size. Color, light pink to cream white. Perfectly healthy and easy to grow. A seedling of W. H. Chadwick and Western King. Extra large cuttings from soil or sand, $2.50 per dozen; $18 per 100, prepaid. Willis E. Hamilton, Belfast, Me.

Chrysanthemums. C. H. Totty, Madison, N. J.

If You Do Not Find What You Need in Our Ready Reference Department, Write Us About It

St. Louis.

PLENTY OF STOCK.

The weather during the past week has been very changeable. Stock is plentiful; carnations, however, have held up firmly 2½-3 cents were the prices demanded for white stock on account of Mother's day. The retailers in general laid in quite a supply. Long stemmed American Beauty roses have been quite plentiful and fine stock is offered in cleanup lots at low figures, some extra fine stock going on Saturday at 12½-15 cents. Outdoor lilac is about over and red peonies from the south have made their appearance. Blue iris is now in in large quantities. Cape jasmines are expected to arrive this week.

NOTES.

Wm. F. Nichol, president of the St. Louis Seed Co., is offering a chance to all children in the city under 15 to get six packets of fresh flower seeds entirely free to help make the city more beautiful; Saturday morning was the distribution. The seeds were phlox, nasturtiums, stocks, sweet peas, verbenas and marigolds. Teachers and parents are appealed to to encourage the children in the cultivation of flowers.

Will Young, president of the Florists' Club, can be seen daily at Delmar gardens, superintending the planting out of the grounds of the new sunken gardens. This will be a fine artistic job when finished and will add greatly to the beauty of this popular summer garden.

The Southern Nut Nursery Co., whose offices are at 1411 Leggett building, have a display in the windows of the Iron Mountain Railroad Co. of fancy paper shell pecans. The nuts on exhibition are very large and, according to the growers, very profitable.

Quite an excitement was around the wholesale market Saturday, Wm. Smith, of Wm. Smith Floral Co., announced to his friends that his partner Will Osseck has just phoned him that Mrs. Osseck has been safely delivered of a 10-pound boy.

Joseph Goldbach has opened up a retail establishment at 1806 Olive street on the south side of the street. He has a fine stock of flowering plants. He also makes a specialty of gold fish of which he has a very large variety.

John S. Seketer, well-known in the wire design trade, has opened up a new shop at 202 N. Thirteenth street. He is a very artistic worker and thoroughly understands his work and should make good.

We regret to announce the death of Alex. H. Krite whose wife conducted a retail establishment on Cass avenue; our sympathies are extended to her in her sad bereavement.

Quite an interest is displayed in the early closing movement. Some favor closing from June 1 while others think July, August and September sufficient.

The annual outing of the Florists' Club to its friends is now being talked about and the time and location of the picnic will be discussed next Thursday at the meeting.

W. F.

LOS ANGELES, CALIF.—Dr. Perlley Spaulding, pathologist of the Bureau of Plant Industry, Washington, D. C., arrived here recently to experiment on eucalyptus seedlings with a view to determine the character of the fungus trouble that attacks them and to devise means for its cure. The specimens not being in good condition for the experiments, Dr. Spaulding will return in August. He has been experimenting with conifers in the east with a weak solution of sulphuric acid.

LITTLE CHANGE.

There has been a little change in the market, affecting carnations only. Mother's day caused quite a run on white; unfortunately a number of growers were off crop on this particular variety and it kept the wholesalers hustling to fill their orders. On roses there is still quite a glut in this city and the American Beauty market has not improved. It is hoped the commencements and social affairs will stir something up along this line.

"It's an ill wind that does nobody good" is a proverb Chas. Dougherty of McKeesport had substantiated during the storm last week. Mr. Dougherty has a pleasant country residence in North Versailles township, but until the storm, the fact that his barn inclined at an angle of 45°, was a drawback to his enjoyment. The wind which caused so much damage struck Dougherty's barn and instead of hurling it, as in the case of several other structures in that vicinity, raised it up, turned it round about and left it standing plumb.

The Pittsburg Florists' and Gardener's Club met May 4 with a good attendance. The subject for the evening was "Bedding Plants." Frank Cooks, gardener to J. H. Parks received a certificate of merit on Clerodendon Balfouri, cibotium, Nephrolepis davallioides furcans. McMadsen, gardener to R. H. Boggs won a certificate on rehmannia and Comet aster. It was decided at this meeting to hold future meetings in the various wholesale houses until a satisfactory hall can be obtained.

E. Weaver of Randolph & McClements who has been ill the past month is able to be around again.

A. M. Murdoch showed a very pretty window of yellow iris and white snapdragon last week.

E. G. Sigle of Youngstown, O., had a very narrow escape, his plant wagon upsetting.

H. P. Howe of Ridgway has closed up his business there and moved to Kane.

Visitors: Geo. Huscroft, Steubenville, Geo. Manos, Chicago, Th. Malbranc, Johnstown, I. S. Crall, Monongahela, Martin Reukauf, Philadelphia, ——— Smith of Edwards Folding Box Co., Philadelphia, and Israel Rosnosky of the H. F. Michell Co., Philadelphia.

J.

Washington.

BUSINESS LIVELY.

We have experienced the first real hot weather of the season and in consequence stock has suffered considerably. The retailers experience great difficulty in keeping the roses from opening, and the only remedy seems to be to use plenty of ice. Last week the several White House events on the cards, two unveiling ceremonies and the hospitalities in connection with them, a continuation of dinners and luncheons kept the local retailers hustling. The regular meeting of the Florists' Club was held at Gudes hall, 1214 F street. I. Rosnosky, with Henry F. Michell Co., Philadelphia, was admitted to membership. President Kramer, asked the members of the Florists' Club's opinion regarding the fall show, and claimed that if all were in favor of such a show it would be advisable to make known the proposition, so that the growers might prepare for the same. Peter Bissett agreed with this and the secretary moved that preliminary preparation be made at once. Much was said regarding the success of the last show, and many expressed their views regarding a favorable hall to hold the fall show. The majority seem to favor Old Masonic temple where the show was given last year.

Potomac park, the reclaimed land flanking the Potomac river, will soon be one of the finest open spaces around the city, with all the conveniences of a first rate park. Col. Spencer Cosby is deeply interested in the project.

Worcester, Mass.

The first May show of the Worcester County Horticultural Society, held May 6, was the poorest in a long time. The visitors were disappointed, there being only five tables occupied by the exhibits and they were spread out somewhat. The reason assigned is the bad weather and the florists and private gardeners being busy planting, etc. The awards were: Cut flowers.—Allyne W. Hixon, first; Mrs. A. E. Underwood, second; Albert Pollard, third. Basket.—Allyne W. Hixon, first; Mrs. A. E. Underwood, second; Albert Pollard, third. Hyacinths.—Mrs. Edward Warren, first; Mrs. E. J. Whitney, second. Pelargoniums.—M. J. Whittall, first.

MORE HAIL DAMAGE.

In the afternoon of May 8, the most terrific hailstorm this city has ever known caused the florists here much loss. Angel's Greenhouses had about 1,000 feet of glass broken. Carter & Hagemann who had about a third of their glass broken about two weeks ago by hail lost the balance of it. Of the 14,000 feet of the Stiles Floral Co. there are not a dozen unbroken panes of glass. The foreman states that by actual measurement and weight the majority of hailstones were three inches in diameter and weighed seven ounces each. Many pots in the houses were broken and between the falling glass and continued hail much damage resulted. For summer flowers this firm had erected over a part of a field a flat roof of lath, nailed on rafters supported by 8-foot posts set 8x10 feet. It is estimated that the hail broke about 30,000 of the laths. Fortunately extra whole insurance on the total area of glass was carried. Carter & Hagemann also had whole insurance but all condole with Mr. Angel who was not insured.

G. S.

AMES, IA.—Considerable damage was done here, by the recent hailstorms, to several greenhouse establishments.

The Allied Trades

Descriptive particulars—with drawings or photographs, if possible—of any new apparatus or device which may prove helpful to the trade are solicited for this department.

Facts About Concrete.

A smooth run for the wheelbarrows such as is provided by good boards lessens the labor considerably.

See that there are no lumps of clay or loam in the stones or gravel, as these prevent the concrete binding.

Always have the mixing board perfectly level or waste will occur by the grout being washed over the ends.

Plenty of help, in order to handle the mixing and placing of the concrete with dispatch, is a great advantage.

In preparing concrete see that the sand is perfectly free of all vegetable matter or the strength of the concrete will be materially reduced.

If the mixture has a streaky look it is not thoroughly incorporated, and more time must be given to it, working it over and over again until it is thoroughly mixed.

A mixture of sizes of stones or gravel is always an advantage. It reduces the size and number of voids in the concrete, thus saving sand and cement and resulting in a more compact mass.

In very hot sunny weather finished concrete is better for being covered with boards for a few days until thoroughly hardened. It must also be protected in frosty weather, but not with manure. In hot weather damp the surface daily for a week to prevent this drying out much quicker than the center.

Hot Water Versus Steam.

ED. AMERICAN FLORIST:—

I expect to put up three greenhouses, 25x100 feet each, on a new place, as I have no more room here. Would you suggest building to run north and south? What kind of heating, hot water or steam? I expect to enlarge this as soon as possible.

W.

Wisconsin.

While it really makes very little difference which way the houses run, building them north and south, with even-span roofs, has some advantages when the lay of the land makes it possible to have the heating plant at the north end of the range. Especially if the size of the plant is to be increased, steam will be likely to give more satisfaction than hot water, as, although the cost of fuel may be slightly more, the expense of installation will only be two-thirds as much. L. R. T.

Albany, N. Y.

At a regular meeting of the flower show committee of the Florists' Club, held on the evening of May 6, some progress was made in preparing for the exhibition which the club proposes to hold in November. The hall committee, Patrick Hyde, chairman, reported that negotiations are under way with the state adjutant general for the use of the local armory on the occasion. The large drill shed can be divided off and one-half will afford sufficient room for the exhibits. Chairman Fred A. Danker announced contributions to the prize fund from J. Snyder, Rhinebeck, President Frederick Goldring, Louis Menand, and Nathan Smith, carnation grower. The nucleus of a guaranty fund was raised among the members and an adjournment taken to the evening of May 20 when it is expected that a number of committees will be ready to submit reports.

The meeting of the show committee followed a regular meeting of the club at which Chairman Danker of the flower committee moved that the club decorate a memorial in the city on May 30. President Goldring appointed Messrs. Danker, Kurth, and Menand a committee to decide upon the memorial to be decorated. The committee retired and after consultation reported that it recommended that the club send a foliage wreath to be placed upon the soldiers' monument in the Rural cemetery. The report of the committee was adopted. A special committee composed of Frank M. Briare, Louis Menand, and H. E. Whittle presented a resolution upon the death of the mother of Wm. J. Roche, one of the members. The next meeting of the club will be held at the establishment of Patrick Hyde on the evening of June 3.

The Lord & Burnham Co., New York, was the lowest bidder for the new greenhouse to be built by the bureau of parks this summer. The firm bid $4,384. The board of contract will undoubtedly make the awards at an early date. R. D.

Concord Junction, Mass.

There is every probability that the demand for general bedding stock will be away ahead of that of last year and, by the reports of growers to date, it is likely to prove equal to the "prosperity" year of 1907.

Leonard Cousins, Jr., reports a very brisk trade in field grown pansies, these having been a specialty with him for many years. He has a fine collection worked up by constant selection of hardy, fall-flowering showy sorts. He also grows some 20,000 carnations in all the popular varieties including several promising new ones of his own raising.

GREENVILLE, Mich.—The Greenville Floral Co. is doing a large and increasing business in pot plants.

Boilers, Tubes, Flues, Etc., at Wrecking Prices!

If you intend to increase the size and capacity o your greenhouse or make any repairs for the coming winter. be sure and write for our low estimate on your requirements before placing your order. We have just purchased at a forced sale **50,000,000 ft. Brand New Lumber and Timbers,** which we offer at prices lower than your local dealer can supply the same grade.
Estimates Furnished Free, Our Greenhouse Engineer will furnish you with any estimate on anything you may require in the Boiler, Heating Material or Building line. **Write for price list on Iron Pipe.**

7-500 horse power Babcock & Wilcox water tube boilers with B. & W. chain grates, about 5 years old: 160 lbs pressure. Also complete coal and ash handling apparatus capable of of taking care of these boilers.
4-250 horse power **Heibe** water tube boilers with Oliver patent grates; 100 lbs. pressure.
1-125 horse power **Morrison** corrugated furnace, internally fired boiler, 125 lbs. pressure.
1-48x21 locomotive fire box boiler. 60 horse power. 100 lbs. pressure.
24-Horizontal tubular boilers, triple riveted: ½-in. shell. ⅝ heads; with Murphy Furnace and stokers on all boilers: also coal and ash handling apparatus for these boilers.

Greenhouse Boilers!
A complete line of locomotive, fire box boilers. Kroeschell Greenhouse boilers, Return tubular boilers. Cast Iron Sectional boilers, etc.: some are rebuilt, some brand new, but all are in first-class condition for further service.

1—150 horse power fire box boiler.
Good for 60 lbs. pressure. Free from patches, bulges or blisters.
Complete with all fittings.
We want to move this boiler quick and quote a special price of..... **$500.**

Boiler Flues! Fitted with special thread and couplings. Can be used same as threaded pipe and fitted with calked joint greenhouse fittings at the end of the run. These flues have the same strength as wrought iron pipe and are offered at about half the price. Any size desired.

6-72x20 horizontal tubular boilers, quadruple riveted; 50 4½-in. tubes; 110 lbs. pressure.
4-72x18 Horizontal tubular boilers, 100 lbs. pressure.
4 72x16 Horizontal tubular boilers, 95 lbs. pressure.
2-66x16 Horizontal tubular boilers, triple riveted, **Butt** strapped, 140 lbs. pressure.
8-60x16 Horizontal tubular boilers, 100 lbs. pressure.
2-54x16 Horizontal tubular boilers, triple riveted, butt strapped, 125 lbs. pressure.
2-48x14 Horizontal return tubular boilers, butt strapped, double riveted; 125 lbs. pressure.

HOT BED SASH at EXTRAORDINARY LOW PRICES.

BOILER TUBES. 20 carloads of 4 in. Boiler tubes in perfect condition. They are just the thing for heating purposes or for retubing boilers. Other sizes can be furnished at specially low prices. Write for complete list.
5 carloads of Boiler tubes, 2 to 6 inches inclusive, also tubes with threaded ends. Get our prices on pipe, valves and fittings: we can save you money. Greenhouse fittings at half price.

Cincinnati.

A GOOD DEMAND.

Cool weather at the beginning of the week had the effect of retarding the heavy crops that were over burdening the market and conditions generally are much better than at last report. Demand for the season of the year is as good as can be expected while the quality of stock is all one could wish for. Roses are fine and, although some mildew is to be seen here and there, it is so little that it hardly makes an impression. Carnations are not as plentiful as last week consequently a slight increase in price is noticed. Good lilac in fine variety is on the market and prices justify the cutting of the branches. Outdoor lily of the valley is to be had but the quality is poor. Sweet peas are coming along in increased quantities. Lilies are good property and the same may be said of green goods. Smilax and ferns are scarce. Tom Windram is keeping the market well supplied with Asparagus Sprengeri and A. plumosus from his Florida farm.

The regular monthly meeting of the Florists' Society was held Saturday evening May 8, J. A. Peterson presiding. The names of H. J. Bode, E. R. Buschle and Fred Gear were placed in nomination for membership and will be voted on at the June meeting. All committees in charge of convention affairs reported progress. It was decided to hold weekly meetings of the board of governors on Monday evenings at the Sinton hotel, beginning May 17. At these meetings nothing but business pertaining to convention affairs will be discussed. Nominations for officers for the ensuing year then took place and it was decided to nominate the present board of directors without opposition as they have future affairs of the society pretty well in hand and unless all signs fail they will be elected at the annual meeting in June.

Henry Schwarz then read a paper entitled: "A Brief History of the Cincinnati Florists' Society" and when Mr. Schwarz finished he not only received the thanks of the society, but was the recipient of a good deal of applause. It was also suggested that the paper be turned over to the souvenir committee to be printed in the souvenir book which will be issued next August. J. A. Peterson showed some new varieties of lilac and cucumbers from his place. M. Meyer of Silkaline fame was present but business called him away before the meeting adjourned and the chair did not get a chance to call upon him for a few remarks.

NOTES.

W. K. Partridge made an assignment May 4, to Attorney Bellew for the benefit of his creditors. Liabilities are placed at $30,000 assets $40,000 and hailstorms are given as the cause of which Mr. Partridge was the victim twice in the past year and a half. The last storm occurred about two weeks ago and he suffered a loss of $8,000 and the cool weather setting in caused the roses to become mildewed and render them unsalable. The assignment created surprise among the trade in this city and a great deal of sympathy was expressed for Mr. Partridge in his trouble and all the boys hope that he will weather the storm.

The standholders in the Jabez Elliott Flower Market are now devoting their time and energies to unloading the bedding plants and some good stock is to be had at right prices. Good geraniums were noticed on George Corbett's, Dellar's and Witterstaetter's stands, Chas. Pfeiffer, Burtschey Bros., Ed. Fries, Gus Adrian and the Sunderman's showed miscellaneous stock well grown, Edward Schuman & Sons had a big lot of pansies of exceptionally fine strain, Schuman Bros. of Newport had fine ferns, Al Forder nice begonias, Ben Glins some good palms; in short all showed good stock and ought to be rewarded for their efforts by doing a good business.

C. J. Ohmer, who has been south for the past month combining business with pleasure, returned home Saturday evening and says he was greatly benefited by his trip. He looks the part.

Our Supplements.

Subscribers should see that they get copies of the fine supplementary illustrations showing high grade design and decorative work. These fine supplements appear with each issue and should be carefully preserved as they mean much to the retail florists in dealing with their customers, illustrating as they do the various kinds of work that the every day florist is called upon to perform.

The papers in which the supplements appear should be likewise preserved, as they contain much valuable data with regard to these special illustrations. Subscribers should see that they get every issue, as otherwise they may miss some of this high grade work.

SUGGESTIONS FOR MEMORIAL DAY.

Preparations.

At no time of the year does the average retail grower realize more the necessity of a show house or at least a show bench than during Memorial day week. While it is bad enough to have salable plants scattered over the houses at Christmas or Easter it is far worse to have this happen at this time of the year, where a thousand and one things have to be attended to at practically the same time. It usually does not take any longer at Easter to sell a customer $5 or $10 worth of plants than it will to sell $1 worth on Memorial day, and anything that can be done to save time and help to make a quick sale is in order. Nothing can be worse than to have to hunt to the end of one house for a couple of ageratums and to another for something else, and much time can be saved by having a good number of each variety of such plants for sale properly displayed in one house. Much depends on the display made the week previous to Memorial day; there is no better advertisement for the place, not only for that day but for the balance of the bedding season. With each year the demand for plants and flowers, suitable for grave decoration, increases which all tends to make this day, or rather week, as important for most of us as any we have during the year, and nothing should be left undone to be ready in every respect for the proper handling of whatever business there may come. If located in a suburban town, don't overlook a neat advertisement in the local paper. Not that people don't know you; it is more to remind them of the fact that they can get and take along what they may require to the cemetery.

Plants for Shady Places.

Quite frequently we have a call for plants suitable for shady places, such as graves where the branches of large trees overhang. Outside of Vinca minor hardly another plant could be used to cover a grave where no sun or very little of it can be had, but in half shady places where a geranium would not bloom, the begonia family, both the tuberous rooted and fibrous, can be recommended. A grave planted with two rows of the former of one shade through the center of the grave and a border of English ivies, consisting of nice 2½-inch stock about one foot long, will make a very neat, satisfactory and lasting decoration. So will Begonia, Erfordii and Schmidti. There is not half enough of either of these valuable bedders used for grave or lawn decorating. The two last mentioned begonias will do equally well in sunny positions. B. Erfordii with a border of Madame Salleroi geraniums makes a splendid combination. It does not cost a bit more to grow begonias than other stock and many more would be sold if the public could see them.

Cemetery Vases.

While all of the stock which the florist usually furnishes for grave planting will need occasional watering in order to do well, it would be folly to recommend a customer to use a planted vase if there is any doubt as to the proper care it might get. But wherever this can be depended upon a vase planted either to flowering or foliage plants is desirable. We have always a few of them filled a week or so before and either sell them as they are or take orders for others. If the vase consists of an assortment of plants geraniums and either vincas or English ivies will form in most cases the main part with a few lobelias and marguerites, a good Dræcena indivisa and a few coleuses. As to coleuses whenever possible they should be avoided. A coleus will always grow strongly in a vase and rob the other plants of nourishment.

The light and dark achyranthes are far more suitable for vases. An ideal vase can be had by using nothing but Boston ferns, either alone or with English ivies along the outside. This makes a fine showing all summer. The foliage will be a little light in color when grown in the open sun, and the fronds not so long, but that is the only difference between them and the ones grown in shady places. Be sure and have proper drainage in the vase. A Bos-

ton fern loves plenty of fresh water, but will perish if the roots are in water on account of poor drainage in a few days.

Cut Flowers.

The way things look at the time of writing there will be but little bulb stock left to cut in the middle west on May 31. Late tulips and narcissi cut before quite open will keep perfect almost a week if put into a dark, cold place, and this should also be done with outdoor lily of the valley, lilacs, cut Spiræa Van Houttei, peonies and others. A couple of really hot days will ruin most of these flowers when fully open on the plant. The heaviest call is not for roses and carnations; most people after having these on every occasion all winter are usually looking for something different at this time of the year and prefer what is known as spring flowers, and it should be so. The proper, timely cutting of these flowers is of the greatest importance and means money to the grower.

A good supply of greens should also be on hand. There is always a demand for some, and for the man whose place of business is far away from a wholesale market it is well to carefully go over everything 10 days before so as to be able to have shipped in on time everything needed. While doing this do not forget to order a few cemetery cut flower vases; they are inexpensive and therefore much in demand. In greens, ivy leaves, galax, leucothoe sprays, boxwood, branch laurel, laurel festooning and wreaths are most in demand and should be carried. They all last quite a length of time if not kept in a hot, dry and light place. Also order a good number of cheap baskets; hardly ever does a customer think of bringing one along when buying. Some expect to pay for them, others don't, but they are so cheap that one can afford, even with a small order, to furnish a basket

Useful Stock.

Pansies are among the most called for plants for Memorial day; there is no better way than to have a good number of baskets containing 12 to 25 plants in each ready. This is far better than to have a customer spend an hour selecting them from the frame they are growing in. This holds good with forget-me-nots and English daisies as well as verbenas. Spiræa Japonica and hydrangeas are also leaders for this day. Have them soaked thoroughly before they go out; a few hours without water will turn the most beautiful plant into a worthless one, and on that account, attention should be given them.

No matter how many new things one may have to offer, some of them never seen before, the geraniums are as popular as ever, and a good plant in full bloom is after all hard to beat for decorating a grave with. Assort the plants as to sizes; there is bound to be call for the cheapest as well as the choicest; there are buyers for both and the right way is to have batches of both ready. Here and there we get a customer who demands a geranium where maybe only one flower on the trusses is open or where one can just notice the color, but in most cases the plant has to be in full bloom in order to sell. Therefore it is well to keep this in mind when selecting plants for the filling of an order for bedding out, for here oftentimes plants not in bloom or only partially so can be used. Don't overlook a good number of white geraniums; hardly ever is an order taken for an assorted lot of plants that does not call for one or two white geraniums.

Vinca minor, by many called grave myrtle, is in greater demand than ever; for quite a number of years we had but little call for it, but of late the demand has increased more than for any other plant we grow for Memorial day. There are two ways of having the plants; one is to take up a quantity in small clumps, have the ball wrapped in paper or moss; another is to grow a number of them in

Dragon Vase by Fleischman, Chicago.
Five Feet High Filled with Antirrhinums and Ixias

3½-inch pots. The latter is the better way. Plants potted up in September from rooted runners and overwintered in a cold frame make fine material the following spring. While the above have for years constituted the most important of the Memorial day plants, the alternantheras echeverias, coleuses, heliotropes, sedums, lobelias, pot roses, ageratums, in fact, practically all of our bedding plants are in demand, and well grown stock of any of these is bound to be sold at good prices.

POUGHKEEPSIE, N. Y.—The Saltford Flower Shop had the decorations at the spring concert of the Orpheus club which were very elaborate.

RICHMOND, N. Y.—The business of the late George Henry, who died in January of this year, is being carried on by his nephew, James B. Henry.

CLINTON, IA.—Andrew Bather reports fine business at his large new store, 235 Fifth street. The demand for seasonable stock is also good at the greenhouses.

THE RETAIL TRADE

THE fad for decorating automobiles which is greatly on the increase in the east, should be encouraged in every way by retailers. The automobile has in some cases hurt the flower business by taking people from society functions indoors, and if it can now be made to turn a wheel in the other direction, so much the better.

The Dragon Vase.

The dragon vase shown in the accompanying illustration is one of many superb specimens of bronze ware shown in the Jackson boulevard store of the Fleischman Floral Co., Chicago. It is five feet high without the flowers, and the effect of the yellow snapdragon and ixias which were shown in it when the photograph was taken was exceedingly good. These vases are shown in a great variety of shapes and they give a tone to the store that cannot be obtained from cheaper, showier vases and other receptacles for flowers and plants. We have referred on other occasions to the splendid specimens of hammered brass, china and other ware always to be seen here and they are costly but good adjuncts to any first-rate store. Even if sales of them are not very frequently made they show a good profit when they are sold and are a standing advertisement for the store.

Wreath of Croton Leaves and Sweet Peas.

SEE SUPPLEMENT WITH THIS ISSUE.

There is a richness of tinting and a bold outline to the leaves of some of the better varieties of crotons that render them especially adaptable to the larger and more striking wreaths and other forms of decoration. Their long lasting quality is also desirable in work of this description and the combination of the two is seldom found in the same plant. For instance, there is the old Cissus discolor, now being used to some extent for wreaths. The color is very rich and beautiful while the vine-like sprays and tendrils are very attractive and make artistic work, but the leaves are so soft and easily bruised and last so short a time out of water that their use cannot be said to be altogether satisfactory. Leucothoe, magnolia, galax and other greens there are in plenty, but they are too somber when used alone and have not the bright tints of the crotons, in which there is a wonderful display of color.

The beauty and utility of sweet peas are too well known to need more than a passing allusion, while the peas and crotons in combination are very rich and satisfying when the colors are well chosen. Wreaths made from these flowers and foliage are especially suitable for sending away long distances, as they come out looking fresh and attractive after a railway journey that would be fatal to the appearance of more fragile and evanescent foliage and flowers. They are in some sense a novelty to many persons, as their use has not been pushed to the extent that the other foliage has. Large funeral wreaths of croton and cycas leaves artistically combined have a bold and striking appearance, while Easter lilies and crotons is another

PARIS FLOWER MARKET.
Showing the Covered Section.

fine combination. Croton leaves alone, in variety, some of the broad leaved kinds and others of the very narrow, wavy class, are occasionally seen, and there are many other ways in which they can be used that will at once occur to the retailer who has this class of work to do.

May Flowers in the Chicago Stores.

With stock very plentiful, of excellent quality, cheap and extremely varied and trade very good for the time of year, Chicago retailers should be happy. In most cases business has picked up quite a little since earlier in the month and some of the better class stores are handling a very large amount of work for funerals, society functions and early weddings. Splendid quality American Beauty roses at $10 per 100 may not suit the grower but it is certainly an advantage to the retailer who has good work on hand to be able to fill his orders with this class of stock at so low a figure. Roses of all kinds were seldom better than now, the cool weather having kept the stamina in the plants, resulting in fine stems and flowers of excellent color.

One of the surprises of the week was some fine Mme. Chatenay at Harry Rowe's; these flowers show what a superb rose this is at its best and it is at its best now. From a somewhat lengthened observation of this rose we are inclined to the opinion that if a moderate shade was used from now on and the houses run with full air on as far as possible there would be finer flowers and better foliage. Mr. Rowe intends to take advantage of the summer quietness and fix over his store, putting in new fittings and a new floor. The material he has chosen for the latter is a German invention, patented here, and consists of cork, marble dust and some chemical substance that gives a fine finished floor, yet silent, waterproof and attractive in appearance. It is made by the Marbleized Plate Co., Cincinnati, O. Stock of all kinds is very fine here and Mr. Rowe reports trade good. We noted some particularly attractive flower boxes here with orchids and other flowers very naturally painted on the covers.

O. J. Friedman's new store is very attractive now. In the center and at other prominent positions are some remarkably fine kentias, beautifully finished, large healthy specimens of great value and attractiveness. The cut flower stock here is very varied and good. Gladiolius The Bride, Childsi, and a number of fine Gandavensis hybrids were specially noted, also some very beautiful pink antirrhinums. The latter we saw in one or two other of the best stores and it is handled, we believe, by Miss Tonner on the market. It is quite the best thing in snapdragons to date and a superb variety well grown and carefully shipped. Pansies, fine lilac, orchids and irises were also remarkably good here, while the reports as to business are satisfactory. John Mangel is still busy fixing over his store and everybody is kept on the jump handling good funeral and other orders, the usual June cut flower stock being displayed.

The Fleischman Floral Co. is kept busy with work of a very varied character, wedding, funeral and dinner orders being plentiful. The best varieties of sweet peas, orchids, lily of the valley and novelties are handled here in large quantities and a number of fine bouquets, a large floral pillow and several good table decorations were among the orders at the end of last week. A. Lange is still making good with his dollar boxes of flowers and these net him many orders of higher price owing to the satisfaction they give to his customers. The store is at all times busy, the staff being large and capable. In all the other down-town retail stores there is an abundance of fine stock shown and judging by appearances, the people inside are not idle.

Speaking generally there seems to be no shortage in any line, though carnations are not as plentiful as other flowers. Richmond roses are still very fine in color and stem. Killarney is not quite as good as it was and good Bride and Bridesmaid are not very plentiful. Mrs. Potter Palmer is showing up again in fine style, as is Mrs. Marshall Field and Chatenay. White stocks are fragrant and useful in many kinds of decoration. Sweet peas are perhaps the most expensive flowers on the market, yet they are being disposed of in prodigious quantities and great variety. The modern sweet pea is certainly a great institution and has come to stay. The Spencer varieties, under any other name, look as fine if they don't all smell as sweet and are probably the most popular flower in existence just now. Good mignonette is seen, peonies are coming along though they are still cut tight, while daisies, Spanish irises, tulips, narcissi, marigolds and lilac help to round out a fine supply of really good and useful flowers.

The Modern Sweet Pea—II.

THE SPENCER TYPE.

The Spencer type of the sweet pea is worth an article. Here is where we are now in the evolution of this flower. But few of the varieties have as yet been put within the reach of the American flower-loving public, although the English fanciers are all agog over them. Still, their advent must be announced, and another season will put a good list of them into the American catalogues. And they mark a genuine epoch in the development and popularity of this flower. Their general form is distinct. Nature seems to have reserved some happy secret of crossing by which we now get this new advance. It is remarkable that such a simultaneous break from the previous grandiflora type should occur on both sides of the Atlantic. Events seem to have their appointed time in the floral world as well as in other things.

The Spencer type has not come from patient selection, but it will furnish a grand opportunity for selection. Henry Eckford's prophetic vision was shown in his choice of this flower for special work. The Spencer type shows what nature has locked up in its benignant bosom. I used to think of Mr. Eckford as a high priest who entered the holy place. If an astronomer ought to be devout, the man who enters the secret place of the hybridizing art ought also to be devout. He cannot possibly know what he will get. But it is a thrilling moment when he finds that nature has rewarded him with a new color, or has let loose another measure of its pent-up life and energy.

DESCRIPTIVE NAME WANTED.

Some early harbinger of this new Spencer type was called orchid-flowered. And it seems rather constricted now to put the name of Spencer on all the varieties. We need some guiding divinity who shall decree a more botanical term in such cases. Still, it is provisionally convenient for the seed trade to tack on such a label. I thought when Mr. Eckford gave us the grandiflora type with its graceful hooded form there was nothing more to do but add more blossoms to the stem. But not only now have we an increased size of standard, but nature has lavishly added such a surplus of blossom fabric that it has to dispose itself in wavy form, and the wings correspond with the standard in this respect. I am glad to have Mr. Morse say, "The best hooded or shell-shaped form will always be popular, and we need not imagine that the Spencer types will wholly supersede them."

SAVE THE HISTORICAL NAMES.

Now that this new type has come to us I want to protest against making a billboard of it to advertise people's names that have no special interest to the general public. We pardoned Mr. Eckford for using his novelties to call the roll of his entire family, but Heaven save us from carrying this thing very much further. I seriously question the good taste of it. A little of it has a complimentary fitness. And now that the new Spencer race has got to be named I am glad that those most prominently interested on the American side advocate retaining the previous names, and when they break into Spencer form simply add the term Spencer, such as Apple Blossom Spencer, Lovely Spencer, Ramona Spencer, etc. Indeed, I have mourned to think we were going to lose the early historical names of this flower. Certainly we ought never to discard such names as Painted Lady and Butterfly. They became ingrained in the affection of all who years ago loved the sweet pea.

"TOO MUCH ALIKE" VARIETIES.

We see how jealously we need to guard nomenclature when the color represented by John Ingman is bracketed in the English year book with six other names as "too much alike." Here are seven new names: John Ingman, George Herbert, E. J. Castle, Rosy Morn, Rosie Sydenham, Mrs. W. King and Phyllis Unwin; and Robt. Sydenham finds it has been given still other names: John Watson, Senr., Glory of St. Albans, Paradise Carmine and King Alphonso. So, too, the Countess of Spencer is almost if not quite reproduced in Paradise, Enchantress, Olive Bolton and Codsall Rose. And, again, Mrs. Collier, Mrs. Felton, Dora Cowper, Ceres and Yellow Dorothy Eckford are bracketed together. Still, this is an encouraging symptom of the enthusiasm felt over the Spencer type. Our American climate will curb somewhat this fine-drawn distinction, and our growers and seedsmen will not give their endorsement to such excess of enthusiasm.

THE BEST IN VARIOUS COLORS.

Of course we heartily welcome any advance that is made on the standard colors. We want the best white Spencer, and the best primrose Spencer, and the best lavender Spencer, and so on. Sydenham puts Mrs. Chas. Foster ahead of Lady Grisel Hamilton. We shall have this year King Edward VII Spencer. Mrs. Collier was given an award of merit by the National Sweet Pea Society as an improved yellow, different names being given to it by various exhibitors, but Mr. Sydenham says that he personally does not think it much of an improvement on Hon. Mrs. Kenyon. Morse now puts out a Flora Norton, Spencer, and I am much interested to see if this beautiful new blue has reached the Spencer size and form. Navy Blue is certainly improved in color in Lord Nelson (brilliant blue). For improved orange,

NEW SWEET PEA MRS. ROUTZAHN SPENCER.

Helen Lewis came out in fine form, but dropped back in size. I much prefer Henry Eckford in color, and if it can be carried up to Spencer type it will be magnificent.

The pink shades will be numerous, and we shall have grand Spencer types. Lovely Spencer has come and I hope Prima Donna will come soon. Mrs. Routzahn Spencer gives us a novelty, but as I looked over a good many of this variety last summer I did not feel that it would spring into great popularity. The apricot shadings on primrose are not as pretty as rose and carmine. But it is a fine flower in size. Phenomenal I like exceedingly, and it approximates to a Spencer, but Mr. Morse doesn't claim it as such. I wish it might be made into a full Butterfly Spencer. The striped and flaked varieties are taking readily to the Spencer type. Aurora, on which I received a certificate from the Massachusetts Horticultural Society as its first exhibitor, comes out now as a Spencer. Picotee edges are beautiful things to work for either in carmine or blue, and the English fanciers now describe several such introductions, on both white and primrose grounds. The National Sweet Pea Society has what it terms an audit, reporting the points scored by the varieties competing for a high place. Helen Pierce, the very unique marbled blue variety, jumped from 33 points to 97 in 1907; Mrs. Collier (yellow) took a big leap forward; Black Knight held a steady position; Gladys Unwin fell away somewhat; Miss Wilmott dropped from 72 points to 32; Nora Unwin scored 81 points; Paradise, Frank Dolby, Mrs. Hardcastle Sykes, Henry Eckford and Mrs. Alfred Watkins came forward with a rush. Nora Unwin displaced Dorothy Eckford, but Mr. Sydenham thinks Etta Dyke superior to Nora Unwin.

THE CONCERT OF NATIONS.

In Great Britain the sweet pea men are doing a good deal of visiting among the special growers. I see Mr. Burpee's face among the groups of these visitors. A kind of itinerant judging is carried on in this way, and the men who are doing first-class work have this fine compliment paid to them. And still our English cousins are abusing their freedom in being in a hurry to tack on a new name to about everything they get. George Gordon writes: "The question of precedence in naming is always beset with some difficulty and, having regard to the increased attention that is being paid to the creation of new forms of the sweet pea, this difficulty is not likely to greatly diminish for some years hence. It has, however, been materially lessened by the course taken by the society from the first of recognizing, in making awards to novelties shown under several names, the name first given." Chas. Foster has conducted the sweet pea trial at University College gardens, Reading, under the auspices of the national society. I just want to say in closing that the advent of the Spencer type has brought with it a wail about sports and mixed stocks. Evidently in carrying up this lovely flower to its latest type we have carried it away from its old tried and trusty habit of reproducing itself true from seed. The Spencer hybrid stock will probably display many a coquettish art of this kind and the seedsman must not be wholly blamed. We may depend upon it the English fanciers will say all that needs to be said about this.

NEW SWEET PEA ASTA OHN SPENCER.

Greenhouse Output.

ED. AMERICAN FLORIST:—

How much should the annual output amount to from a greenhouse with 35,000 feet of glass when mostly roses and carnations are raised, some bedding stock and very few bulbs forced? The business is strictly wholesale. What should be the proper expense for fuel and help, including working foreman? V. P.

Regarding the amount of the annual output from 35,000 square feet of glass as asked by "V. P.," there is a very uncertain element to contend with, and a very wide difference between a very successful management and only a fair or mediocre management. There are also often reasons why, with the best quality of management by the most successful men, the product will fall short of expectations; in short, there is no absolute certainty of what the output will realize from any range of greenhouses, and I know of no standard by which such a range as "V. P.'s" can be estimated to yield, as so much depends upon the market as to its value, also upon the number of plants and flowers produced. Some seasons also will very materially effect the crop of flowers produced, so as to greatly reduce the quantity and as a result the net returns, for any given amount of glass. And there seems to be a general depression of prices for almost all kinds of cut flowers from year to year, which, of course, will reduce the value of the output from any range of glass in proportion.

Years ago we used to think $1 per square foot of glass a fair return for the money invested. This was when labor, coal and all other supplies were much cheaper than the present time. Now, with practically every item of expense greatly increased, the produce is gradually reducing in price, which means that the net returns in a great many cases do not balance at the end of the year. Within a radius of 20 miles from where this is written the downward depression has closed up quite a number of greenhouses simply because the owners could not realize enough money from their output to meet their running expenses and many of these places were run as economically as possible by hard working owners and their employes. J. N. MAY.

Notes on Aquatics.

The planting season, with all its rush and worry, is fully upon us and every branch of gardening is alive and active, for the season is short. To have everything previously planned and arranged and in readiness when the season opens saves much time and anxiety. As this is a vast country, the seasons in some sections are early and in others tardy, so that any given date when to plant is not applicable to all alike. This is not an exceptional season, though, on the whole, it is late. We have experienced warm, spring-like days, followed by chilly, cold and freezing weather, demonstrating the fact that we have not arrived at a period of settled warm weather, and it has been imprudent to plant choice stock, especially water-lilies. It may be asked if hardy water-lilies suffer by early transplanting. They do. Water-lilies commence to grow early in April, or very soon after the first heralds of spring, but this early growth is more or less elusive. The first signs of growth are the new leaves apparently—but these same leaves have been on the plants all winter and are but attracted to the surface by solar action; for some time elapses after their appearance before new roots are visible, and it is during this period, after an apparent growth or stimulation, that early transplanting and changes between one section and another that hardy water-lilies receive a check and fail to grow. Some varieties are more susceptible than others, and our native varieties are the first to suffer.

Hardy nymphæas may be successfully planted from now on until August. Nelumbiums or lotus are even later than nymphæas in starting, and these will show a larger percentage of failures than nymphæas from too early transplanting. After the tubers are dug they will deteriorate at once if conditions are such that they do not start into active growth. As to the best varieties of hardy water-lilies to plant: What may be styled best are not so in all places. For small ponds, pools and the like, the small and medium varieties are commendable, and few if any of the native varieties should be used. Where a variety of plants is desired, but one of a kind should be planted, but the closer we get to nature, and plant but one or two varieties, the more pleasing. But each can choose and plant according to his own will. One objection to planting any of the native varieties in small ponds is the fact that they all grow very freely and all produce seed freely, which soon takes full possession of the pond to the exclusion of all choice or less vigorous growers. But we must not forget that there is beauty in variety, and where a pond is large enough the general public demand variety.

For artificial ponds a box, say, three feet square and one foot deep will answer the purpose for planting in; this is far better than tubs, as the latter do not hold sufficient soil to carry one plant for the season, unless such varieties as Nymphæa pygmea, N. pygmea helvola and N. Laydeckeri rosea are grown. The soil should be moderately rich, a good turfy loam enriched with thoroughly rotted stable manure or cow or sheep manure. The dormant roots of most varieties are small, and those not familiar with the different species or hybrids should not despise the small roots that may be received when purchased, for, although the pond may look sparsely planted, yet other things being equal, the small roots will give fine results. For natural pools, ponds, etc., there is difficulty in planting on account of spring freshets that are liable to occur and the water being too deep to allow of planting. Under such conditions new plants may be potted or planted in small boxes, where they may make considerable growth and later on these plants may be turned out of their receptacles and, with the earth and roots in a mass, dropped in the water where wanted to grow. The weight of the soil will steady the plant and keep it in position until anchored by new roots. The plants in pots or tubs or small boxes may be placed in shallow water or in tubs or other receptacles temporarily.

It is too early to plant the tender nymphæas, but these should be started if not already done, in a greenhouse or some warm, light place. These can be grown on in 4-inch or 5-inch pots and later transferred to summer quarters, planting out about the first week in June. Our seasons are none too long for these useful nymphæas, and more especially the tender night-blooming varieties which are of great service to the florist. These should be pushed a little at the commencement of the season and a higher temperature maintained; they delight and flourish in a water-temperature of 75°, but should at all times have full sunshine and abundance of fresh air. The large flowering varieties, such as Nymphæa Bissettii, N. dentata, N. magnifica, N. Geo. Huster, N. O'Marana and N. Frank Trelease, are best for cutting purposes, though all are useful, especially the reds. Other aquatic plants are useful, but should be planted with discretion, as most of the floating plants are free growers and liable to take possession of the pond at the expense of more desirable kinds.

W. T.

LEWISTON, PA.—Thompson Bros. are beautifying the grounds around their mill, an example worthy of being followed by others.

THE ROSE.

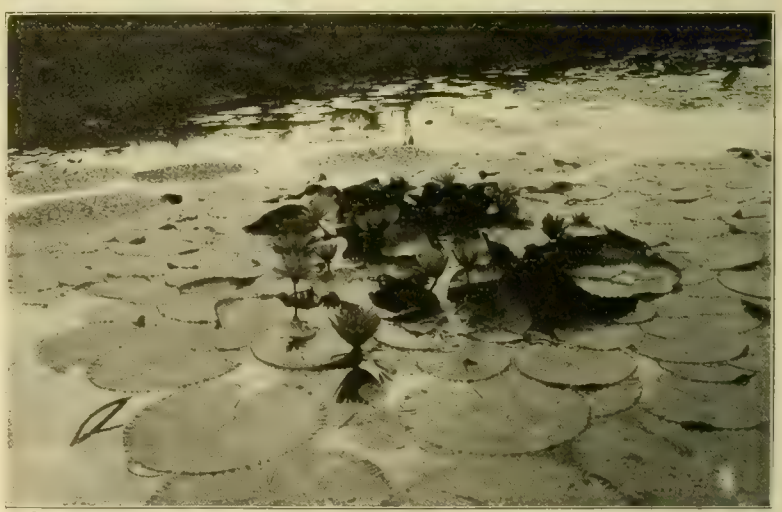
Roses from Cuttings.

ED. AMERICAN FLORIST:—

Which kinds of roses can be easily grown from cuttings and what is the proper way and time to take the cuttings? A BEGINNER.

All the roses usually grown in a commercial way, for plants or cut flowers, may easily be raised from cuttings, the methods having been repeatedly given in THE FLORIST. There is probably no rose in existence that could not be so grown, in fact, everything depending upon the right kind of wood being used and the proper treatment being given. Many growers prefer blind wood for propagating, that is, wood that is of fair strength but which has not flowered. But this, we think, is largely a matter of fancy. When we have had to work up stock of a variety that is scarce we have used wood of all kinds, short, stubby shoots where flowers have been cut from, growth below flowers and blind wood. All have given good results, but the wood we should choose would be that of medium size according to the variety and half ripened—neither young and green or old and hard—and bearing good leaves. Any time after February 1 is a good one to start, the earlier the better. For cuttings take two or three eyes and cut cleanly with a keen knife. Remove the lower leaf and insert the cuttings half their depth in the sand. This should be kept at a temperature of about 60° and constantly moist, the air of the house being about 5° less. In the majority of cases it is sufficient to encase the bench on which the sand is in linen, below, thus confining the heat to the bed and preventing its quick escape to the house, but this, of course, is a matter of individual circumstances—the point is to make the difference, which encourages root action at first rather than leaf growth. Keep the sand very moist at all times, see that the cuttings are very firmly inserted and during the time the roots are forming shade the heads should the weather prove bright.

G.



TYPICAL PLANT OF NYMPHÆA.

American Beauty in the South.

The illustration herewith is a perfect refutation of the statement sometimes made that American Beauty roses cannot be as well grown in the south as elsewhere. The beautiful flowers there depicted were grown by the Metairie Ridge Nursery Co. of New Orleans, this firm frequently cutting this rose with 9-12 foot stems and handsome well colored flowers. The plants that the flowers illustrated were cut from are three-year-olds and planted on benches but transferred to solid beds later, two years ago. This firm has been very successful with American Beauty and other roses on solid beds and now intends to plant the whole of its rose stock of all varieties this way, being confident that it is the better plan.

This suitability of solid beds for roses in the warm southern climate of New Orleans is quite in line with what northern growers are doing for summer roses. Acres of Kaiserin, American Beauty and others are grown this way in the middle west, and even in Canada the solid bed is becoming increasingly popular. It holds more soil, keeps the roots cooler in summer, and is in every way more satisfactory in hot weather than the high and dry wooden bench. But no argument either for or against can be nearly as convincing as these splendid flowers; they are not specially selected or cut for exhibition but are simply fine examples of the superior class of stock that Harry Papworth grows under the conditions referred to and as such they speak for themselves. They prove plainly that, given good culture, American Beauty can be as well grown in the south as in any other part of the country and are a great credit to all concerned.

Some of our Problems as Rose Growers.

A paper prepared by Prof. L. C. Corbett of the Bureau of Agriculture, Washington, D. C., for the annual meeting of the American Rose Society, March 16-18, 1909, held at Buffalo, N. Y.

Heat, light, water and soil are the big four with which the plant grower be he farmer, gardener or florist, is concerned. In nature, all of these factors are more or less in the class of variables. The farmer and gardener working in the open and dependent upon natural sources for heat, light, moisture and soil are playing at a game of chance. The two factors that it is within his power to modify are moisture and soil. By irrigation the water content of the soil can be regulated. By the judicious use of fertilizers and manures the food supply of the plant can be modified. Aside from these two alternatives the farmers and gardeners are totally dependent upon nature's kind provisions. The florist carries the cultivation of plants one step further from the field of chance by safeguarding the temperature factor.

REFLECTION AND REFRACTION.

The florist should be able to control three of the determining factors in plant growth—viz., heat, moisture and soil. His variable should be confined to the light factor alone. Our modern greenhouses have been well planned so as to cut out as little of this as possible by the use of light framework and large glass. The great weakness in our present scheme of greenhouse construction lies in the total disregard of the laws of reflection and refraction. The fact that a glass roof can be so constructed that it will allow a very large percentage of light and heat rays of the sun to penetrate the house at certain hours of the day and to reflect or throw off a large percentage of the same rays at other hours of the day has, it would appear, been given altogether too little consideration both by florists, physiologists and physicists. This is one of the respects in which practice is far behind.

The available knowledge on this phase of construction seems to have been almost entirely ignored by the practical florist and greenhouse builder. Much thought is spent in designing gutters, sash bars and ventilating apparatus, while the pitch of the roof and the direction of the ridge, factors which directly measure the value of the house, are entirely ignored. It is, therefore, evident that the florist may, in a measure at least, influence the light factor. While he cannot increase or decrease the actual hours of sunshine, he can, by properly planning his houses, afford his plants the maximum benefit of the light provided in nature. Researches which have been conducted along this line clearly indicate the value of light as a factor in plant growth. Prolonging the light period by artificial means as has been demonstrated by Bailey, Rane, the writer and others, decidedly hastens growth.

AMERICAN BEAUTY ROSES IN THE SOUTH.

HEAT AND MOISTURE.

The temperature and moisture requirements of plants are given far more consideration than light by florists, but it is surprising to note the great lack of available general information upon so simple a matter of properly providing for the requisite amount of radiation in a greenhouse for a particular purpose in a definite locality. Too often this important matter is left to the local plumber, who has no idea of the problem involved, or how to solve it. Yet heat is the greatest charge against the growing account. Moisture is coin of the realm to the gardener and the florist; both deal in products the chief constituent of which is water. A pure and adequate water supply intelligently used is a determining factor in garden and floral undertakings.

SOIL.

Now we come to the soil, an absolute essential to the success of every commercial agricultural enterprise. The source of the livelihood and wealth of the major portion of the earth's inhabitants, yet what shall we say of it, if it is so complex? If we consider its derivation we find the rocks yielding to the action of frost, water and air to supply the mineral matter, vegetation springs up to ripen and decay, and thus contribute humus, another factor as important as the mineral. The decomposition of organic matter in the soil sets to work other forces which

are no less important than the primary constituents themselves. The combination of the organic and the mineral substances creates a condition which makes it possible for the many low forms of animal and plant life to exist in this medium we call soil. These low forms are some of them helps and some of them hindrances to the plant grower. The introduction of this host of tenants complicates things and renders what was formerly thought to be simply a chemical problem, a very intricate combined chemical and bacteriological puzzle.

NITROGEN AND BACTERIA.

Some aspects of this puzzle are yet so new and difficult that no prediction dare be made at this time regarding their importance to agriculture. Enough has been determined, however, to prove that an important lead has been struck. The value of nitrogen gathering bacteria is sufficient evidence of the richness of this new field. Knowledge of the way in which nitrogen gathering bacteria work gives us a clue to the solution of one of the most difficult problems in the maintenance of soil fertility. It explains the division of labor in nature and gives a reason for crop rotation. The same laws that govern the rotation of crops in field operations come into play to our advantage in the soil heap. The compost heap should consist of organic material in the form of soda and manure, so combined with mineral matter in the form of loam and clay as to enable decomposition and nitrification to take place rapidly.

The florist's business is not merely to place available food in a natural soil but to combine the several constituents for fertile soil in such a manner as to secure that mechanical condition and food supply calculated to best meet the requirements of the particular crop under consideration. In this respect the florist has an advantage again over the gardener and the farmer. But can anyone describe the ideal soil for any particular crop? Can anyone say that a soil consisting of 10 per cent organic matter, 30 per cent clay, 40 per cent loam and 20 per cent sand is an ideal soil for roses for carnations, for lettuce or for any other crop? I think not. Our knowledge upon these important points is of the empirical kind. An experienced gardener makes up a potting soil, he mixes it with his hands and if it appears too heavy he adds sand, if not sufficiently fibrous, he adds leaf mould or peat. Just why he adds these substances he cannot tell neither can he describe to you the exact consistency and character of his ideal rose soil, yet his knowledge of the requirements of a particular crop leads him to make the changes above noted to bring the soil to his ideal of the requirements for the particular crop.

SOIL PROPORTIONS.

Can this empirical knowledge or idea be reduced to exact terms? Is the exact amount of available plant food and the proportion of sand, clay and humus in this ideal soil measurable? If it is we can obtain a basis for exact experiments to determine whether or not the gardener's judgment of an ideal soil for a particular crop is correct. If these factors are not measureable we are as much at sea in our experimental work as is the gardener. It is all simply a matter of judgment. Up to the present I am sorry to say that the whole matter is largely dependent upon experiences and judgment. Soils differ so in composition and physical properties even when, so-called, like materials are used in their make up, and we know so little regarding the influence of bacterial action which is consistently working in the soil that it is practically impossible in the present state of our knowledge to reduce the soil factor to exact measure.

A much more accurate idea of the relative influence of heat, light, water and soil can be secured under greenhouse conditions than in the open, but even here, while we know infinitely more than did the early gardeners, our knowledge is far from exact. It may be that exact data will never be possible, but certain it is that the knowledge that is so rapidly accumulating will clear up many dark places and we hope soon put us in possession of facts to replace empiricism. Until more knowledge is available we must continue, each to determine for himself under his own environment, the most profitable combination for the compost and the varieties best suited to his soil and his market. "There is no royal road to knowledge," and intelligent painstaking care is the only way to spell success.

To Be Done Now.

IN THE GREENHOUSES

Repot the earliest plants of Begonia Gloire de Lorraine and water very carefully until re-established.

Keep the young stock of bouvardias closely pinched and repot or plant out the old stock specimens.

Maintain a moist atmosphere around the plants of Nephrolepis Whitmani and other heavily crested forms, but avoid watering them overhead.

Sow Primula Sinensis, P. obconica and P. Forbesi in a shady house and watch the watering carefully, avoiding a dry or over-moist condition of the soil in the pans.

Take the opportunity offered when the bedding stock goes out to thoroughly clean the houses before puting in other stock.

Repot young rose stock if the benches are not ready and there is a risk of the plants becoming starved in the pots.

Too moist an atmosphere in the house where cattleyas are flowering causes the flowers to spot and keep poorly.

Before placing azaleas outside clip them into shape a little if they need this attention.

OUTDOORS

Take careful note of the date of flowering of the bedding tulips and especially note those that flower simultaneously for future reference.

Use the hoe frequently among all advancing crops, as keeping the surface stirred is one of the greatest aids to rapid growth.

Do not cut over the growth of bulbous plants after flowering if it can possibly be avoided; they should be allowed to finish their growth naturally.

Where liquid manure can be spared it will be of great assistance now to old and well established herbaceous plants, such as irises, campanulas, peonies and others.

Trim up the edges of walks and flower borders before the soil gets hard and dry. Use a line and do this work carefully.

Kill the weeds when they are young and thus prevent seeding, at the same time assisting the crops by lightening the surface soil.

A few bits of brush either laid on the soil or stuck into it among annuals protects them from cold winds and will form a support later as this becomes necessary.

Soot, freely sprinkled among the rows of young onion plants, is one of the best preventives of mildew and onion fly.

A few late sown annuals in the front of the herbaceous border will brighten up this in late summer.

INTERIOR OF THE BURDETT CO.'S STORE, SEATTLE, WASH.

Maintain a very moist atmosphere about the gardenias by spraying after the flowers are cut and daily about the young stock.

Fuchsias should be shifted into their flowering pots. Pot firmly and place the plants in a very lightly shaded, well ventilated house.

If the pots are needed callas may be turned out and the balls of soil stood closely together outside.

Take up the poinsettias and start them going for cuttings which will soon be needed.

Water Supply.

While written primarily for the instruction of farmers, the following note, taken from the Country Gentleman, will doubtless prove of interest to those who are contemplating alterations or additions to their means of water supply:

There are two kinds of tube wells—artesian and Abyssinian. Artesian wells are those in which water rises to or above the surface. Abyssinian wells are generally driven. The water must be drawn by pumping. Wells of either kind may have to be bored or driven, according to the materials through which the tube must pass. It is, of course, true that the deeper the well the greater the cost, and that bored wells cost much more than driven. Wells are often driven to great depths, one of 6,571 feet being recorded, but it should be noted that, unless water rises of its own accord to certain heights, the cost of pumping will be too great for the water obtained.

For most places in the humid regions Abyssinian wells will serve all needs, being inexpensive to put down and reliable in operation; occasionally, however, an artesian or flowing well may be encountered, or boring through rock strata may be necessary. In the arid regions and mountainous districts deep-driven or bored wells are generally the rule. In the case of deep-driven or bored wells a professional well-borer should be employed, and a hydraulic expert would best precede him in determining where to locate the well. Scott, an English authority, cautions that "where rock has to be passed, the expense is more and water uncertain, unless the geological conditions of the district are well understood." A not too deep-driven Abyssinian well is cheap and easy to put down and a free-flowing artesian of not too great depth is very desirable. The deep and bored wells should be resorted to only when necessity demands.

The next important consideration is the means of obtaining and conveying the water. As mentioned before, the natural flow or gravity system of water supply is best, where possible, because there is no expensive machinery to install, and to get out of order when it is especially needed. This system needs only sufficient natural fall to carry the water to the distributing tank or reservoir. Animal power is often used for pumping and raising water. A cheap and steady machine for delivering water is the hydraulic ram, which is operated by a minimum fall of 18 inches in the water flow. It has no complicated machinery to get out of order, needs no constant attention, will last for several years, gives a regular supply of water, and will force it a distance of 1,000 feet or more; the ram is used in connection with surface water. Another not expensive machine is the windmill.

Water power is also used for pumping, the over-shot wheel or water-turbine being the machine ordinarily employed. This form of power is not costly and is quite constant; it should be more used than it is at present. The prime requisite here is, of course, a regular supply of water from a pond or stream. But to keep up the water-supply independent of the weather conditions an engine of some sort, or an electric motor is valuable. The first cost is apt to be great, and inexperienced persons may buy machines which cannot operate economically, or which are unsuited for their intended use; again, the capacity of the plant may be greater or less than is needed. Therefore, when one intends to install a pumping plant, especially if it is to be rather costly, the advice of a hydraulic expert should be obtained. Among the engines, the hot-air is one of the least expensive, most dependable and safest. Gas and gasoline engines are also widely used to good advantage, while steam engines must have a bulky and fussy-to-handle fuel and need more or less attention. The electric motor, where power is cheap enough, is easy to run and does rapid, steady work. Where there is sufficient water power, electricity is a very desirable, economical, clean and simple way of doing much of the work.

Water may be stored in open reservoirs, tanks or cisterns, constructed according to needs or the local conditions, of earth, wood, iron, brick, concrete, etc. Reservoirs and tanks should be situated high enough so that the water may run by gravity to all parts of the establishment. A new type of air pressure tank is placed in a cellar and forces the water wherever needed by compressed air. Cisterns constructed of brick or cement are useful for catching water from the roofs of buildings; they should be made with closed tops to keep out dirt and insects.

Propagation of Hyacinths in Holland.

The hyacinth does not naturally form a large number of new bulbs, but only a few offsets occasionally develop. When a bulb is broken at its base, or is in some way injured, however, a number of buds or bulbils appear about the wound. It was the observance of this fact that led to intentional wounding or cutting of the bulbs on the part of the cultivator with a view to increasing his stock. In the propagation of hyacinths on a Dutch farm, by what is known as the notching or cross-cut system, the base of the bulb is notched or scooped out. Immediately after the bulb is scored in this manner, the wounds are exposed so as to dry them. In former times they were exposed to the sun's rays, but it is the practice now to apply some absorbent material, such as ash or lime, which prevents the exudation of sap.

It is usual to set apart a portion of a bulb store for use as a "nurse-room," in which the formation of bulbils takes place and their development continues until they are ready for planting. A series of trays is arranged from floor to ceiling so that the propagator can conveniently examine the bulbs from time to time. These trays are formed very much after the manner of those in which potatoes are stored for seed purposes. The bottom is constructed of laths, and the openings allow of a free circulation of air. The bulbs are cut in June, after which they are placed directly into the trays and kept in a high temperature. Soon afterwards there appears in every wound a number of tiny buds or bulbils. By this system flowering bulbs can be obtained one year earlier than if the base of the bulb were hollowed. This is because, fewer being formed, they receive more nourishment individually than in the case of those obtained by the other treatment. In October or November the bulbils are detached and planted in ground which is liberally dressed with cow-dung in the preceding year. In the following season the bulbs do not flower, but merely produce foliage. They are lifted with the other bulbs in June, placed in the bulb stores and spread out on laths to dry. When this is accomplished they are cleaned of the foliage and loose leaf scales, and stored in a well-ventilated room until planting time in the following autumn. As soon as they are of a proper flowering size, which takes usually three years, they are ready for the market. Before they are sold each bulb is inspected. Those that are suitable are packed in paper bags or cases amongst husks of buckwheat.

Haarlem, the city of the counts of old Holland, as is well known, has long been occupied with raising flowering bulbs, and every field and meadow about the city is now cultivated as a bulb farm. It is the narrow strip of sandy ground, situated immediately behind the dunes, that has proved exceptionally suitable for such culture. Tulips, and particularly narcissi, can be propagated and grown for commercial purposes in many parts of the British Isles, in the Scilly Islands and in Ireland, but in the case of hyacinths the whole of the commercial output, for Europe at the least, is raised in Holland.

The bulb fields during the latter part of April always present a glorious sight, but a visit to the district in autumn is not less interesting. Along the banks of the canals and rivers, strips of land are covered with bulbous plants. The country from Leiden to Beverwyk, 12 miles north of Haarlem, is one continuous bulb farm 30 miles in length. Even around The Hague many orchards have been destroyed, the trees grubbed up and bulbs planted in their stead. Until about 1860 bulb cultivation in Holland was limited to the immediate neighborhood of Haarlem, the country beyond being either meadow or orchard land, but bulb culture has proved to be more profitable. The farmer, therefore, became a bulb grower, and his sons soon adapted themselves to a commercial life. They learned foreign languages and traveled in other countries for the purpose of disposing of their stocks.—Gardeners' Chronicle.

Boiler Insurance.

The Boiler Inspection and Insurance Co. of Canada sent us an illustrated pamphlet describing the explosion of the boilers at Miller & Sons, Bracondale, Ont., under circumstances already reported in our columns. The illustrations plainly show the terrific force of the explosion and the great damage resulting, one portion of a boiler being thrown nearly one quarter of a mile, though it weighed one ton. It is little short of miraculous that no one was injured when the fact of 23 employes being in the greenhouses is taken into consideration. Although $50,000 damage was done Messrs. Miller carried no insurance and the loss to them of the houses, crops and loss of business is very disheartening. Had the boilers been inspected and insured this would have been at least alleviated somewhat and it shows how necessary it is to be beforehand with this, for no one can tell how soon it may be their turn. The company mentioned above has been in business in Toronto for 34 years, being the pioneer in this kind of insurance, and issues policies covering all classes of risks from boiler explosions.

OBITUARY.

Mrs. S. S. Skidelsky.

Dr. Rachel S. Skidelsky, wife of S. S. Skidelsky, the well known commercial traveler and senior member of the firm of Skidelsky & Irwin, seedsmen of Philadelphia, died on May 12 of pneumonia. Mrs. Skidelsky was a wonderfully bright and capable woman. She was a graduate of the Woman's medical college of Philadelphia and rose rapidly to prominence in her profession, being a very active member of the County Medical society. She was also president of the Hebrew Ladies' Emergency society, an active member of the Civic club, the Mothers' club, the Council of Jewish women and Keneseth Israel congregation. Mrs. Skidelsky was of a charming personality and very popular with all who knew her. K.

Personal.

J. D. Carmody, of Posey county, Ind., who has spent the greater part of the winter in Mexico, returned last week.

Miss Cassie Arnold, Omaha, Neb., will soon move to Chicago, according to report.

Mother's Day.

The honor of originating Mother's day belongs to a young lady of Philadelphia, Pa., Miss Anna Jarvis, who conceived the idea of celebrating the anniversary of her mother's birth, which is May 9, under this designation. The white carnation is the floral emblem of the day, but other white flowers are used when carnations can not be obtained. We understand this is the third year of the celebration.

A SYNOPSIS of Chas. H. Allen's paper on "Plant Development" will be found on page 857 this issue.

TRADE in box and bay trees is increasing. The smaller cities which formerly used but a dozen or two, now use carloads.

MUCH valuable information respecting the San Jose scale will be found in the Zoölogical Bulletin (Vol. V, No. 9) published by the Pennsylvania Department of Agriculture.

THE new edition of the American Florist Co.'s Trade Directory contains the names and addresses of the leading florists, seedsmen and nurserymen of Mexico, Argentine Republic, Brazil, Chile, Colombia, Costa Rica, Guatemala, Nicaragua, Paraguay, Peru, Uruguay and Venezuela, a very important new feature.

ALL florists should see that their local newspapers make use of the excellent and seasonable articles issued regularly by the National Council of Horticulture. These articles, written by competent horticulturists, are reliable and valuable. Newspapers may secure this press service free on application to Jas. H. Burdett, 17 W. 104th place, Chicago.

"WHITE FLY STUDIES IN 1908," by E. W. Berger of the Florida Experiment Station, contains information as to the destruction of white fly, chiefly along the line of introducing fungoid enemies of the larvæ of the insect. The author also recommends the destruction by citrus growers of the cape jasmine, the chinaberry tree, the umbrella tree, the prickly ash, all privets, Citrus trifoliata and all useless or abandoned citrus trees of any variety.

Chrysanthemum Society of America.

ED. AMERICAN FLORIST:—

As a member of the Chrysanthemum Society of America I wish to express my appreciation and extend my hearty support to President Smith's appeal for an increase in membership of that organization. Mr. Smith very truly points to the benefits conferred on the growers of chrysanthemums generally by the work of the C. S. A. and its committees. And while he does not do so he undoubtedly could have offered practical suggestions which if acted upon would materially increase the benefits conferred. The work of the organization may not be above criticism (is anything in the universe?), and sincere criticism is solicited. But standing off with your hands in your pockets and criticising the other fellow seldom accomplishes anything. In traveling the highway of human progress, you have probably noticed that it is pretty generally up hill, and for every one that is willing to give a helping hand to push the benzine buggy, there are nine who meander contentedly along, either doing nothing themselves or ridiculing the efforts of those who are, but ready to get in and ride as soon as the machine decides to go or the top of the hill has been reached and there are prospects of a comfortable coast down the other side. Perhaps it may seem like imposing upon good nature to ask it, but will not each member of the C. S. A. make a special effort to get at least one new member during the remainder of the year? I will guarantee to send one myself. I. L. POWELL.

Hail Notes.

Notwithstanding the frequent storms Secretary Esler of the Florists' Hail Association says that there are only 18 unadjusted losses on his desk from all parts of the country and that there is cash on hand to pay everything and leave a substantial balance.

N. C. Moore & Co., Morton Grove, Ill., say their loss was entirely by wind and do not make any claim for hail insurance.

Omaha losses are heavy and several of them have not yet been adjusted.

Florists Taxed for Deficit.

A new Tennessee law, according to the Nashville Banner, compels florists and other merchants to make up the deficit caused by the no-license campaign in that state. The law reads: "Each person, firm or corporation dealing in cut flowers, or agent for same, conducting the business of a florist in cities, towns or taxing districts of 60,000 inhabitants or over, each, per annum, $25. In cities, towns or taxing districts of 20,000 to (and less than) 60,000 inhabitants, each, per annum, $15. In cities, towns or taxing districts of less than 20,000 inhabitants, each, per annum, $7.50."

In commenting on this T. C. Joy, of the Joy Floral Co., Nashville, states: "The new law applies to every business in the state. We must have more money to make up for the loss of the saloon licenses and hope the people will make up by being able to buy more flowers."

Post Cards as Advertisements.

ED. AMERICAN FLORIST:—

Enclosed please find two photographs of outdoor flowers, sweet peas and asters. I find that these pictures sent out on photographic post cards are very satisfactory for advertising purposes. My customers—retail florists in various places—have seemed very much pleased with them and grateful to me for remembering them thus. The view of the sweet peas is designed to show the large size of the flowers and the length of stem, as well as the quantity of bloom. I find light land very well suited to the sweet pea. With me every joint sends out a flower at the leaf axil, beginning when the vines are only one foot high. The blooms are very large right through the season, but my one trouble has been shortness of stem during dry weather. This year I am putting in an irrigation system and I expect a great improvement. Asters last year were immense—it seemed an extra favorable season. The view which I am sending shows only a part of the field. There is no such drudgery in picking asters as there is with sweet peas, and orders are usually larger. I plan on losing about one-fourth of the plants from blight and some more blooms from black bugs, but mean to have enough plants to make up for the loss. The amount received from an acre of asters is hardly equal to that from an acre of sweet peas, but the profit is perhaps greater.

ARTHUR W. HIGGINS.

Westfield, Mass.

[With this note came two photographic post cards, one showing sweet peas, the other asters grown as Mr. Higgins describes. Lack of space prevents our reproducing them.—ED.]

Important Foreign Exhibitions.

May 19-21.—National Horticultural Society of France, annual exhibtion le Jardin des Tuilleries, Paris, France. Abel Chatenay, secretary, 1 Rue St. Aubin, Citry-sur-Seine, France.

Cincinnati.

A FULL WEEK

We have had a week of good business. While the warm weather rushed stock along still there was a good demand and immense quantities of flowers were used. Roses are beginning to show the effects of the warm weather and must be sold the same day they are cut to insure satisfaction to the buyer, and the same may be said of carnations. Outdoor bulbous stock, such as tulips, narcissi and lily of the valley is past. Iris is coming along in fine shape and outdoor flowers such as spirea, snowballs and weigela are making their appearance. We will soon be receiving peonies in quantity. Sweet peas and marguerites are good property and clean out nicely every day. Callas are in over supply, while a scarcity of Lilium longiflorum exists. One of the scarcest items at present in this market is fern and the wholesalers are having their troubles trying to locate it. However within a week or 10 days the Kentucky fern will be ready and while coarse looking and not as desirable as the eastern stock it will help out. Smilax is also scarce, while there is a sufficiency of Asparagus Sprengeni and A. plumosus in sprays.

NOTES.

The J. M. McCullough's Sons Co. has just received the second importation of bay trees, a most desirable lot. This firm has been handling the finest lot of bays, boxwoods and evergreens to be seen anywhere, the same being selected by Albert McCullough last summer while abroad. Another gratifying feature is the ready sale this stock has met with, showing very plainly that the public will pay good prices for good stock. Miss Edith Kyrk had the lion's share of the work for the Gritz funeral last Wednesday and she used a very choice assortment of flowers; in fact, she relieved the wholesale houses of the best grades to be had on this day. A wreath of lily of the valley, Richmond roses and Farleyense fern was worthy of mention and reflects great credit on Miss Kyrk's artistic ability.

George Gotzhow, formerly with the Covington Seed Co., has accepted a position as foreman and head gardener at L. B. Reakirt's place in Clifton. This is one of the most desirable private places about this city and Mr. Gotzhow ought to make good here, as he is the right man in the right place.

Wm. A. Wittaker, the genial traveling representative of The J. M. McCullough Sons Co., is a very sick man, having undergone a serious operation last Thursday at Christ hospital. Nobody has more friends than Billy and all wish him a speedy recovery.

C. E. Critchell is about the busiest wholesaler in this city at present; his specialty, green goods, is in good demand and his only complaint is the scarcity of ferns, of which he would like to procure about 100,000 a week.

Sidney Werthheimer, of ribbon fame, blew into town one day and was on his way rejoicing the next, stating that he booked more orders while he was in this city than he did any one day since he left home.

Martin Reukauf was a caller the past week and tells us that business is good with him. Well, nobody can refuse Martin an order.

Wm. Murphy is receiving a nice lot of peonies, but says they are slow sellers.

S.

New Castle, Ind.

Since he purchased the Benthey-Coatsworth greenhouse property, Otto Benthey has organized a company to be known as the Frederick J. Benthey Co. Announcement of the deal was made May 7, and the new firm enters the field well equipped to handle an immense volume of business. Otto Benthey will manage the local plant. It will be his business to get out the goods, and his brother will have full charge of the retail branch in Chicago, which has been established for some time.

Over a year ago this property was sold to Peter Weiland for $10,000 at a sheriff's sale, to satisfy a judgment granted to the Citizens State Bank on a mortgage. The property was redeemed some time ago by Benthey, who then got busy and organized a company with plenty of capital to conduct the business properly. Otto stated that it was his intention to change some things very materially. In the future special attention will be given to local retail business. This applies to roses, pot plants, landscape work and design work. The wholesale business will be carefully looked after also. —New Castle Courier.

MERRILL, WIS.—C. Voyes left here May 16 for Washington, Ind., where he intends going into business for himself.

Plant Development.

The reading of the paper under this title which had been prepared by the veteran Chas. H. Allen, of Floral Park, N. Y., before the New York Florists' Club was an intellectual treat such as is seldom given the members of this or any other club. Mr. Allen, who we regret was not able to be present and read his own paper, has, during the course of a long and busy life, been very observant of the so-called little things in nature. These are they that lift horticulture out of the ruck of common professions and make it, to those of the right calibre, a pursuit of never-ending interest. Such a man Mr. Allen is and has been, and the character of the man stands out boldly in his writing.

Plant development was considered by Mr. Allen under three heads. The first, selection through environment, "which means to render Nature all the assistance possible in harmony with what we call natural law"; the second, hybridization, "the object of which is to unite the good qualities of two or more species, forming one of greatly increased value"; the third by means of sports where Nature acts "in self defense in the restoration of some of the specific properties for which the plant is distinguished and which have been destroyed through the interference of art." The first Mr. Allen considers the most important of all, as its application pertains largely to the cereals and food plants generally. In considering this Mr. Allen went deeply into the agricultural end of the question, showing how weak and unprofitable were the results obtained by hybridization or cross fertilization as compared with selection. He pointed out how, to be successful in obtaining a variety suitable for growing under any peculiar circumstances of climate, a kind must first be chosen that is hardy enough and suitable for the climate and then constantly improved by selecting the finest specimens year by year. Although this is foreign to the florist's business to some extent, it is pointed out that such selection and the knowledge of its effect will materially assist the grower of any class of plant or flower. Mr. Allen is rather severe upon the "efforts our government is making, the millions annually spent in the ruination of our agricultural industries under the guise of development," and upholds the Hon. James Wood for his good work from Nature's standpoint, developing his varieties by selection and subsequent good cultivation of the selected individuals.

CHANGES BY ENVIRONMENT

In proof of the soundness of his arguments Mr. Allen mentions some of the changes made in varieties by environment. There are but nine weeks of summer in certain parts of Sweden, but here growth during that time is so rapid that two crops of hay and many kinds of vegetables are produced. Such results from seeds grown in the climate of New York and sown in Sweden would not be possible. The plant must be prepared by the slow method of adapting itself to its surroundings, and what Mr. Allen terms the soul or inner life of the plant has to be aroused to the necessities of the situation and act upon the message it receives before the plant can be successful in its new home. Rather a fanciful reasoning, possibly some of our hard-headed materialists may say, but have they a saner or more likely reason to offer for the changes that are brought about by environment?

Can they say why, for instance—as Mr. Allen points out—the lima bean in Peru as well as the white and scarlet Dutch runner beans are perennial and produce seeds for several months in succession in a kind of half-hearted fashion, becomes annual and so gets down to the business of life that it produces as much seed in two months in the north as it does at home in six? Scotland is justly famed for the finest oats in the world; here the varieties have gradually accustomed themselves to the climate, which is possibly the finest in the world for the crop. The Clydesdale oat imported to this country gave more than double the quantity produced by home grown seeds the first year, but the type adapted itself to the country in a few seasons and gave only a similar weight of oats to the native stock. Here a lesson is pointed out and this is, get seeds from where the species or variety reaches the highest degree of perfection. Referring to the egg plant, Mr. Allen points out that the fruits are much larger when grown in New York state than in its native habitat in Africa, and this large size is not due to any intensive cultivation, but owing to Nature evincing more care of the seeds and producing more pulp for their protection.

AS IT AFFECTS THE DAHLIA

The changes in the dahlia, from the original type into the show, cactus,

pompon and other forms, are wonderful instances of Nature's care for the means of reproduction. In Mexico, its native home, the flowers are single, the ring of petals being simply an adornment, undoubtedly for some wise purpose, possibly for the sake of attracting insects. But, removed to a colder clime, the floral discs of the dahlia elongate to protect the germ from cold which would prevent fertilization and render the flowers seedless and, from a natural standpoint, failures. To protect her own, Nature changes the form of the flower by adding the beautiful petals that protect the germ. This power of Nature is plainly manifest when we take the most highly developed forms of the dahlia to the tropics, where they invariably revert to single or original form the second season. Speaking of the sweet pea, which he says he has known and loved for at least 75 years, the same or a similar effect is noted. In its native habitat it is the tallest growing of the numerous family of lathyrus. In colder climes, but where the growing season was shorter and sharper, the requisite number of seeds had to be produced, consequently Nature eliminated much of the rank growth of vine and produced flowers all at one time or nearly so. The dwarf varieties of the Blanche Ferry type show this in a very marked degree.

HYBRIDIZATION

Is hybridization a science or an art? is the question Mr. Allen asks and answers himself by saying it is both and it is neither. He never remembers a case where the hybridizer sought to obtain a certain result successfully. The results are often happy and all that could be desired, but not what were looked for or hoped for. Comparing the carnation and the rose, the former is a more fascinating subject than the latter, as the season of growth is shorter and the results more interesting because more varied and more quickly obtained. During the last 50 years the development of the carnation has made rapid strides and the author cites his first meeting with the carnation as a commercial flower in the greenhouses of the late John Humphries of Brooklyn. At that time La Purite and President De Graw were the only varieties grown here, though a little later the author visited Flatbush, where Dailledouze, Zellar, Gard, Bennet, Davidson and Augustus Messenburg were located and the "fields" of carnations were an inspiration to him. Pleasing reference was made to these pioneers and their work also upon roses and chrysanthemums considered from the same standpoint.

SPORTS

It was evident that Mr. Allen was much more at home and at ease in his reference to sports, "the third and last order of development, which is Nature's own," and the way he traced the inner workings of the plant's "soul cell," to quote Hæckel, showed how deeply he had thought upon the question. His simile of the apple tree was very apposite. The tree, he said is usually regarded as an individual life, but strictly speaking it is a community, an immense apartment where the tenants dwell in harmony of purpose and where the soul of Nature is janitor. Take 25 of the most distinct varieties and graft or bud them on a tree. In due time the tree will produce fruit of each variety inserted, manifesting a vital principle which is analogous in every form of life. Each and every species is governed by the same law of reproduction, development and dissolution, varying only in degree. The sap carries to the Bow apple its sweetness, to the Early Harvest its acidity without ever making a mistake. The flavor that Nature gave to the apple she will ever protect. It is this endowment, this soul, that gives to the apple its crimson and gold, its yellow or other color, its sweet, sour or subtle flavor, though the human mind, with all its power of reason cannot grasp the occult secret of the inner life.

Nature is a series of changes or unfoldings, and sports are the result of an effort of the "soul in Nature" to be restored to the conditions the Creator assigned them. Types disappear and new ones take their places, old forms crop up in least expected places, showing that the plant rebels against the artificial forms to which it has been compelled against its will. One of the most reliable and extensive growers of tomatoes for seed, the introducer of a large number of fine varieties, told the author he never relied upon cross fertilization for a new variety, but was ever watchful for new forms that were constantly appearing. "When one is discovered it is given every possible attention, every opportunity to develop its every possibility," and this is the secret of success. The author winds up with the following eloquent yet almost pathetic appeal to his hearers:

"Gentlemen, I do not, cannot, expect you to share my views regarding the unity of Nature, that the insect, the animal and the plant has, within, a soul of being, working with and in harmony with the development of the human race which is, as far as we know, the limit of creative thought. But the world is growing. Recently the younger Darwin, who wears shoes several sizes larger than his father required, startled the world of thought with the assertion that plants think, a thought I freely expressed more than 50 years ago. Mind and matter are joint partners and work together in harmony of purpose. The soul in Nature is their ever ready, ever willing assistant. The beautiful and good, the ideal and actual, sustain and accompany each other through every walk of life. With the rise of the individual the nation and the race, the plant has kept pace with every onward, upward movement; and in the decline and fall of nations the beautiful and useful in plant life soon became weeds of sorrow in the solitude. The rose smiles more sweetly, throws out its buds more freely when tended by the hand that loves it. While it has a charmed mission in the development of the human race, it is doubly sweet in making the pathway of the more humble fragrant with its flowers.

Railway Gardening in Canada.

Enthusiasm and success are stamped all over the scheme for making the stations of the Canadian Pacific Railway the links in a flower chain extending across the continent. N. S. Dunlop, the chief of the C. P. R. claims department, 12 years ago inaugurated the free distribution of flower seeds to station agents and others, and the beautiful flower gardens by which so many of the company's stations are surrounded in the summer months are the direct result. In this direction the company has given an impulse to civic pride all over the dominion. It has been noticed wherever the station agent or section men establishes a garden with the seeds supplied free from the company's floral departments, the enthusiasm for flowers invariably extends to the whole community and fosters pride in the beautifying of the homes of the people.

Mr. Dunlop has sent out the annual packages of seed, no fewer than 50,000 packages, representing 32 varieties being distributed in 1,500 gardens across the continent. Agents, section men and employes, together with their wives, vie with each other, and now wherever there is a C. P. R. station, section house or office building, there flowers will be found.

Later on thousands of plants and shrubs will be sent out, while last fall 200,000 tulips, hyacinths, lilies, crocuses and iris bulbs were distributed. This means that with those sent out in former years there will soon be millions of early spring bulbs in bloom.

The Grass-leaved Pandanus.

Those who have command of a warm house that can be kept at 50° to 60° in winter will be able to grow Pandanus graminifolius, says the Gardening World. It is used for the decoration of warm houses and for table decoration. It is the most graceful of all the types of pandanus grown for this purpose. The leaves are very narrow, arching gracefully, hence they have been compared to grass. These leaves attain a length of 12 to 18 inches, though the plant will be most useful for table decoration in the smaller state. It grows very slowly, however, and for that reason remains in useful size for a much longer time than the larger leaved sorts in cultivation. Propagation is effected by taking off the side shoots or suckers and inserting them singly as cuttings in pots of sandy soil.

Glen Cove, N. Y.

The regular monthly meeting of the Nassau County Horticultural Society was held in Pembroke hall on May 14. There was a good attendance, about 50 members being present. In the points competition P. Reul led with a meritorius exhibit of mixed antirrhinums. These were over six feet high with about two and a half feet of flower stem. The awards were as follows: P. Reul, antirrhinums, 90; G. Wilson, carnations 80; H. Gaut, culinary peas 86 2-3; V. Cleres Asparagus Sprengeri 83 1-3. There was, as usual, a very good display of flowers and vegetables for exhibition. A. Kudenbach received a cultural certificate for a vase of sweet peas, and a dish of lima beans put up by H. Grant received a like award. V. Cleres was also awarded a cultural certificate for a fine lot of cauliflower. Among the other noteworthy exhibits was a vase of Gladiolus Blushing Bride, staged by G. Fardel. This is a fine thing and ought to be more widely grown than it is. A. Mackenzie read a very able paper on Chrysanthemums for Exhibition for which the society unanimously awarded him a vote of thanks. J. F. Johnstone, who has recently returned from a trip to Scotland, promised to give an account of his travels at the June meeting. The society holds its rose show on June 26.

W. H. MACKENZIE.

Chicago.

LARGE SUPPLY—NO DEMAND.

The market, which started to go off early last week, kept right on falling until by Tuesday there was a veritable glut. This week has seen very heavy receipts with little or no demand and there is no evidence in sight of any better conditions prevailing until buying for Decoration day begins. American Beauty roses are in great quantity and were never finer. Bride and Bridesmaid are plentiful and grade up fairly well. Killarney and Richmond are in good cut while the supply of Perle is limited. There is an abundant supply of carnations, though red is not quite up to the demand. Violets are about done and the coming week will probably finish them. Lilies and callas are abundant, with very little demand. Speaking of Decoration day, peonies promise to be the popular flower, and as a great many of them are going into cold storage, there will undoubtedly be plenty to go around at from $3 to $8. The coming holiday calls for more cut flowers than either Christmas or Easter and there is talk in some quarters of a scarcity of roses, but from all indications there will be a good supply at prices ranging about the same as last year. Cape jasmine will not cut much of a figure on the market this year. Bulbous stock is not plentiful and is nearing the end. Smilax, which was almost a negligible quantity last week, is more plentiful, though rather stringy.

NOTES

The Bohannon Floral Co., which will move into its new quarters, 11 Monroe street, about June 1, states that it will have one of the most artistic flower shops in the city. A frontage of 50 feet, with two large show windows, will give ample room for display, and the increased floor space is made necessary by the rapid growth of the business. Bohannon also anticipates going into the wholesale trade.

Bruno Kennicott, son of Dr. John A. Kennicott, pioneer horticulturist and brother of the late Amasa and Flint Kennicott, died at the Presbyterian hospital on Sunday morning of peritonitis caused by the bursting of his appendix. While not directly connected with the flower business, Mr. Kennicott comes of a family well known to the trade. He is survived by one sister, Mrs. Frank W. Reilly.

No tulips were planted in the flower garden at Washington park last season, and many visitors last Sunday were disappointed in not seeing them. A few pansies were the only attraction on the flower beds, but the conservatories were very bright with showy flowering plants. Everything outside is progressing well and the trees, grass and herbaceous plants are very attractive to visitors.

Allie Zech captained a party of 15 florists who went out to Miller's last Sunday to play the local baseball team, but when they arrived at that classic suburb, made memorable by the car barn bandits, they found nothing but sand dunes against which to play. It was rather a disgusted bunch of flowers that got back to town at 6 o'clock, and each one solemnly swore "Never again."

Every one connected with the florist business who is interested in bowling should meet with the Florists' bowling club on Friday evening at 8 o'clock at Bensinger's alleys, 118 Monroe street. Games are rolled every Friday evening and a five-man team to represent the Chicago florists will be selected from the high average men to go to the convention in August.

M. Shattls, western representative of Lyon & Co., New York, states that shortly after June 1 he will carry a stock of $50,000 to $75,000 here, and be in better shape than ever to take care of his trade. Mr. Shattls was in town for only a few days, having just returned from a trip through the west, where he reports trade is very quiet.

Jens Jensen, former superintendent of the West parks and later consulting landscape architect for the West park board, has resumed private practice with offices at 204 Dearborn street, Marquette building, rooms 605-606.

Erich Arlt has his place at 1989 W. Leland avenue up for rent and will move about July 1 into the larger greenhouse establishment of E. Brenner at 534 Dickens avenue, which he has leased.

John Kruchten is making a very fine showing of the butterfly sweet peas and states that he has had remarkably good success with them this year, the growth being very free.

S. F. Leonard of the Leonard Seed Co. will sail for Europe on June 5 on the Steamer Minnetonka. Mrs. Leonard and their eldest daughter will accompany him.

J. A. Budlong is showing some very fine white carnations and an abundance of pansies that grade up just a little bit better than ordinary stock.

Sam Pearce has a nice lot of cold storage lilies coming along for June flowering and reports an excellent demand for bedding stock.

J. C. Craig, one of Chicago's old time florists, is putting up 30,000 feet of glass on Wolf road, near Elmhurst.

H. R. Hughes is planning an elaborate window and store display for Memorial day.

O. J. Friedman's new store on Michigan avenue is very attractive.

Aug. Lange says business is improving every day.

Colorado Springs, Colo.

An important deal was consummated May 15 when W. H. Evans, of the Pikes Peak Floral Co., bought the greenhouse property and business of Wh. Clark. The consideration has not been made public but is believed to be about $25,000. Mr. Evans has taken charge of the property. It consists of the greenhouses operated by Mr. Clark at Williamette and Platte avenues, and a large number of houses on Wood avenue. Mr. Clark retains and will continue to operate his nursery business. The deal does not include the land covered by the greenhouses. The business conducted by Mr. Clark is the oldest of its kind in the state. He started here 28 years ago on the site now occupied by the High School building.

The Pikes Peak Floral Co. has for some years been the largest exclusive wholesale floral establishment in the state, and, with the property acquired, will be the largest wholesale and retail establishment in the Rocky Mountain district. Heretofore the Pikes Peak Floral Co. has been engaged exclusively in the wholesale business, but will now enter the retail field. Its greenhouses now cover more than four acres, with the original greenhouses at 519 East Columbia street and the total wholesale and retail business in this line amounts to more than $125,000 annually in this city. William E. Crump will be placed in charge of the sales department of the Pikes Peak Floral Co. and Edward Johnson will have charge of the greenhouses and growing.

LA FAYETTE, ILL.—Gaar Ingels, son of Irvan Ingels, proprietor of the Home Nursery of this place, has engaged with the E. G. Hill Co., Richmond, Ind., as an apprentice. He expects to later engage in the florists' business in connection with his father's nursery.

Notonia Grantii.

This handsome succulent received the above name from a very imperfect specimen collected on Speke and Grant's expedition to discover the sources of the Nile. It was discovered in the Mozambique district in 6° 50′ S. latitude, and is the Kleinia sp. of Speke's Nile Journal, p, 638. In a note attached to the original specimen in the Kew Herbarium, Colonel Grant describes the flowers as blood-red or port-wine colored. The color varies; the cultivated plant has very handsome orange-scarlet heads. The species has been identified with Cacalia semperviva, Forsk., from tropical Arabia, and, applying the rules of priority for specific names, Ascherson has named it Notonia semperviva, under which designation it is likely to remain in some continental botanic gardens. Senecio (kleinia) longipes, Baker, in Kew Bulletin, 1895, p. 217, is reduced to Notonia Grantii in the Botanical Magazine, wherein the plant is figured, tab. 7691. A very similar plant was subsequently described by J. G. Baker in the Kew Bulletin for 1897, under the name Senecio (kleinia) Nyikensis, where the author has: "ad S. longipedem, Baker, Somaliensem magis accedit." Whether this is really specifically different, and also in cultivation, it is difficult to say, but I believe the name has been given to a cultivated plant. There are several dried specimens at Kew bearing the name of this notonia, all of which are more robust than ordinary N. Grantii, as introduced by Miss Edith Cole from Somaliland, and first raised from seeds by R. Lynch, curator of the Cambridge Botanic Garden. It may be asked what is the difference between kleinia and notonia, as genera, and the answer is that it is limited to the latter having the branches of the style terminating each in an ovate appendage. It seems, therefore, that if one is reduced to senecio the other should follow. Notonia Grantii is a free-growing and free-flowering subject.—Gardeners' Chronicle.

The Ladder Fern.

Our so-called Boston fern (nephrolepis) is often called ladder fern on the other side of the water. With us it is frequently called the sword fern, while the Christmas fern (Polystichum acrostichoides), which is constructed like the nephrolepis, but shorter, is known to the trade as the dagger fern. Despite Shakespeare's query as to "what's in a name?" we are inclined to think that our British cousins have the better of us as regards the cognomen of the species in question.—Fern Bulletin.

ADAMS, MASS.—A. J. Boothman is building another greenhouse.

BENTON HARBOR, MICH.—C. Edinborough is building a greenhouse.

SURPLUS AND SLAUGHTER

A saying has come down to us from eminent authority, that a surplus is has been calling on him for the past also make the trip, which will last almost three months, taking in England, one of his oldest correspondents who ...ip through England. While in Holland Mr. Leonard will be the guest of France, Germany, Holland and Denmark, and will include an automobile better than a deficit, but it is hard for the wholesalers to see it in that light at the present time. Very heavy shipments arrived May 10 and each day following was but a repetition of surplus and slaughter of prices. It has been impossible to quote prices accurately, for quotations must necessarily be on the best of each grade of stock. Take American Beauty roses for instance. Early in the week it was stated on good authority that leading retail houses were buying their specials at $5 and $8 per 100. That, however, did not include the many that were not sold the day they came in and were eventually sold, if sold at all, as low as $2 and $3 per 100. With the best roses selling at such prices, it can be easily imagined what happened to the poorer grades. Even the street vendors seemed averse to handling inferior roses when they could buy the best at slaughter prices. It has been said that the lilac crop would not be heavy, but in walking the streets we have noted no evidence of scarcity. During the past week it could be bought in any quantity from a bunch to a wagon load, and being something new it caught the fancy of buyers. The saving clause is that it cannot last long. The very low wholesale prices being paid for even the novelties in carnations, prompted at least one Fifth avenue retailer to placard his windows for "a sale," at 50 cents per dozen, to the great disgust of other dealers of that aristocratic thoroughfare. They think it unprofessional and if Fifth and First avenues are to be placed on the same level it seems as if there is no use in having a Fifth avenue. The foregoing touches on the "killing" feature of the week's business. A great accumulation of the lesser kinds of flowers, such as stocks, sweet peas and other varieties continues, much of which is a drug. The early peonies are coming in, but they have a poor chance among such a heterogeneous collection.

THE PLANT MARKET

Turning from the discouraging features of the cut flower trade, it is pleasing to note activity in the plant market. The plant market, that now is, has its location under an immense tent at Canal and Washington streets, near the Hudson river docks. The time to see this market at its best is on a Saturday morning, from 1 to 3 o'clock. It can be seen on other mornings, but shows to better advantage on Saturdays on account of the greater display of stock. On such a morning it is doubtful if in any place in the world could be found a better display of fine geraniums and smaller bedding stocks than are there offered for sale. About midnight the van-like wagons come rumbling in and are backed up to the curb. The tent is brilliantly lighted by arc lamps, and as fast as the wagons are opened a force of helpers seize the flats and they are carried in and deposited in the respective sections allotted to their owners. In addition to bedding plants many fine pot roses, hydrangeas and other large plants are here sold. The buyers for retail stores and speculators and buyers from various walks of life are early on the scene and it soon becomes animated and interesting. On a recent visit in addition to the above named plants, we noted fine heliotropes, spireas, mignonettes, candytufts, pansies, vincas ivies, marigolds and forget-me-nots, and they are not there by the dozens and scores, but by thousands. Visitors should not fail to interview John Birnie, who is one of the promoters of the enterprise, and knows all about growing bedding plants as well as selling them. The location and surroundings of this market, the hours and conditions under which the business is transacted, all combined make it an attractive feature of the horticultural life of the city.

NOTES

L. B. Coddington of Murray Hill, N. J., who ships a large amount of fine American Beauty rose stock to H. E. Froment, has recently erected a new house, 55x425 feet. It is of flat iron rafter construction with the long span to the south. It has ventilation on the sides underneath the benches operated by a new invention of Manager Sefton's of Hitchings & Co., this firm holding the patents. They also had the contract for the erection of the house. The overhead ventilators are so arranged that the operator at the hand wheel can tell just how much air he has on without looking up.

Anton Schutheis, of College Point, has recently returned from a two weeks visit with a friend in the mountains of Pennsylvania. On the return trip he attended the convention of the Knights and Ladies of Honor, at Rochester. At his range there is a large stock of pot roses and other good things for Decoration day, coming on.

In the case of Ordonez Bros. versus W. A. Manda, Inc. at Morristown, N. J., May 11, the jury brought in a verdict for the full amount of the bill sued for by the former firm, $420 and $18.91 interest, according to the Morristown Daily Record. This was a case involving the purchase and delivery of certain packages of orchids.

As a result of correspondence between the Retail Florists' Association of this city and the agents of the ocean steamship lines, the latter have agreed to give receipts for all flowers that are on board the steamers one hour before sailing.

Among the first peonies that have appeared in the market were those from the gardens of Chas. Smith's Sons, Woodside, L. I. This firm, in addition, continues to grow fine blooms of the genuine Lord carnation.

N. C. Schreiner has given up his wholesale store at 41 West Twenty-eighth street and will, it is said, take a position with a well-known wholesaler.

A small fire in the range of W. H. Siebrecht, Astoria, on the night of May 2, caused considerable damage to flowering stock by smoke.

Joseph Voecke, salesman for Wm. H. Siebrecht in the Coogan building, is seriously ill with pneumonia.

Buffalo.

OUTDOOR FLOWERS SOUGHT.

Continued unfavorable weather has not increased the sale of flowers, nor has it helped to bring in the outdoor stock. All cut flowers, such as roses and carnations, are about as plentiful as they have been. Some lilac has been received, but in limited quantity and of good quality. Sweet peas and yellow and white daisies are meeting with ready sale, in fact, anything that looks like outdoor stock. The heavy rains Saturday evening almost drowned everything in outdoor flowers.

NOTES.

Stroh's Quality Flower Shop, Arlten J. Beyer, manager, opened for business on Saturday very auspiciously. It is one of the neatest and best arranged stores in the city. Tile floors and walls, with mirrors above the tiling, leaving about four feet of wall above the mirrors, which is in white as the whole store is in that color. A very neat, well lighted ice box in the rear shows the stock to good advantage. The counters, card desks and other fixtures are of the latest designs. The new store has best wishes of all.

There was a time when this city was heralded as one of lawn vases and veranda boxes, but it seems as if the florists are living on past laurels. It is about time for some of the greenhousemen to suggest some new mode of filling such receptacles, even if it does cost more. There are some who are willing to pay for something different, and it is up to the greenhousemen to suggest it and get this city out of the same old rut.

Weddings the past week were not of very large proportions and receptions were limited owing to the usual mix-up of moving time. The opening of one of our leading cigar stores called for a large amount of cut flowers. It is safe to say that 300 or 400 American Beauty roses were used, not counting the other cut flowers, baskets, etc. S. A. Anderson had the arrangement.

J. D. Schultz of Tonawanda has torn down one old house and erected two new structures, one 20x100 and the other 18x100 feet. Mr. Schultz has bought property in the business section of Tonawanda for a store with a conservatory in the rear, which will give this town a good retail store, having been very successful during the three years he has been located at that place.

BISON.

Louisville.

A GOOD WEEK.

Business conditions the past week were very satisfactory especially with the greenhouse people, who are rushed with planting. Roses are plentiful and of good quality, they having a fair demand. Carnations are very good in quality and supply and the demand is very satisfactory. Lily of the valley is plentiful and finds some demand. Peonies and iris can be had in good quantities and find a fair demand. Fancy ferns have been very scarce, but the supply is better now. Other green goods can be had in plenty.

F. Walker & Co. will move to their new location on Fourth between Chestnut and Broadway about July 1.

MARKET VERY DULL.

Summer dullness has been the rule the past week, there being nothing of any importance transpiring that called for elaborate decorations. Under these conditions there was a great accumulation of flowers, roses particularly being greatly in excess of the demand. All sorts have begun to show the effects of the hot weather and for choice work the eastern imported stock now has the call. Carnations, while light in color have been fine in every other respect. Some exceptionally fine blooms of Enchantress and Dorothy Gordon were seen the past week. Sweet peas are in good demand, selling as well or better than most other flowers. Spanish iris has been quite a factor the past two weeks, the yellow taking the place of daffodils. The outside shrubbery is now in and is useful for window decorating and where quantity is most desired. Snowballs and duetzia will have quite a run for the next 10 days. Peonies are in, Mrs. Shellem sending the first local stock May 12 to the Leo. Niessen Co. Decoration day will see them at about their height. Many orders for this holiday from out-of-town points have already been taken and business is expected to fully equal if it does not exceed that of last season. There will be quantities of stock at moderate prices which should induce buying as the demand is likely to be larger than ever. The bedding plant men say that business has never been better and they question if there will be anything left after the holiday. There appears but little new in this line, the standard sorts of geraniums and coleus being the most popular. The double lobelia is said by some to stand the sun better than the old single and to be useful as a border plant; if so it will be a great acquisition.

NOTES.

— Ruppert, the city salesman of the H. A. Dreer Co., says they are having an unusually busy season. Hundreds of thousands of herbaceous plants have gone out and the call is still for more. Roses in pots are sent out by the tens of thousands. These are a specialty here and this is where the largest stock in the country is to be found.

Wm. McKissick & Bros. are running eastern rose stock and carry a full line of American Beauty. These are now 50 per cent better than the local stock and give great satisfaction to the buyers. Among other things they promise a fine stock of peonies for Decoration day.

Wallace Faust and Charles Malby, late with Keegan, have taken one of the stores being fitted up under the Hotel Edouard on Thirteenth street above Walnut, which they expect to open in a few weeks as soon as alterations are made.

The Leo Niessen Co. says orders for flowers for Decoration day are coming fast. Carnations, peonies and roses are the leaders. This firm fully expects to eclipse its great business of last season.

Robert Craig says the demand for crotons is larger than ever. Each season his stock is increased but he never seems to keep ahead of the demand.

The sympathy of the trade goes out to S. S. Skidelsky on the death of his wife.

K.

POUGHKEEPSIE, N. Y. — Benjamin Tremper is building a new greenhouse.

READING, PA.—A sneak thief stole between $10 and $12 from the cash register of J. C. Bauder, 913 North Tenth street. The proprietor was temporarily absent at the time. A barefooted boy was seen to run from the place.

Baltimore.

GOODS HARD TO SELL.

Trade the past week was exceedingly quiet, and it was hard to push any kind of products on the consumers. Bedding out is behindhand, the weather not having been propitious and plants go slowly. A good many families are already leaving town, and the season of inaction seems to begin at an earlier date each successive year. The range of the thermometer for the week varied from 36° to 90° a most unpromising condition for the gardener, and the absence of rain is being already seriously felt, the drying winds quickly evaporating from the upper surface the moisture from the showers that fell. There have been no funerals requiring large supplies and the social season is drawing to a close. The demands for the hospitals and the ordinary requirements for social affairs, and weddings not ultra-fashionable, make up about the sum of the daily requirements.

NOTES.

Wm. Madsen, of Govanstown, will it is understood, retire with this season from active business. He has been quite successful, accumulating a neat competence and possessing a well-ordered and productive establishment. This place will be taken over, it is said, by Hans Andersen who has been with Mr. Madsen for several years and who will carry on the business of growing cut flowers. Mr. Madsen is a Dane who has been in this country many years, engaging at first as gardener on private places, always enjoying the confidence of his employer. Later he went into trade on his own account, increasing his plant from time to time until a year or two ago, when he began to contract his operations and tore down one or two of his rose houses. He made a specialty for some time of American Beauty roses, but latterly gave them up and grew Bridesmaid, Bride and Golden Gate, and all of them of a character to give him reputation for their quality. He has no other family than his wife and feels that he has earned the rest which he can now enjoy before old age overtakes him. He has the esteem of the neighborhood in which he has long lived, and all who know him wish him many years of health and comfort.

That the daily papers take more and more interest in floral affairs now-a-days is illustrated by the fact that the Sun of this city publishes an engraving of wreaths made in Berlin to the order of the Baltimore and York Oratorio society to be placed on the grave of Felix Mendelssohn, the great composer, on the centennial anniversary of his birth. The pieces were made by one of the leading florists of the German capital and were each six feet in diameter and composed of roses, lilies, lily of the valley and palm leaves, tied with black and gold, and blue and white ribbons, the colors of the states of Maryland and Pennsylvania.

The determination of Grace Church on Broadway, New York, to adopt at a memorial of its 100 years of existence, a beautiful garden, is surely a sign of advancement of taste, quite at variance with prevailing modes of such monuments. Here the dwellers of the great hot city, citizens and strangers, will find beauty and refinement, repose and cooling freshness, which will appeal to the heart, the memory and the imagination.

The state forester of Maryland recommends the establishment of a state nursery for growing trees to supply the future needs which the restoration of our denuded forests will require. Just how the commercial nurseries will view this proposition is unknown as yet.

The public resorts are vieing this year with each other in the decorations of their grounds. Amongst the most elaborate bedding is that of the Electric park, the contract for which has been awarded to E. A. Seidewitz.

S. B.

Boston.

TRADE UNCERTAIN.

Between prolonged periods of absolute quiet a flicker of activity has served to keep stock moving Graduations and commencement exercises have already begun and we quickly realize that the season is nearer over than we would like to believe. Funeral work is irregular. Stock is in good shape generally speaking and prices are low. Cut flower trade is picking up and the public is more inclined to open its purse than for a good many months past. Roses are the chief item of interest and a few excellent attractions are displayed. Richmond, Killarney and American Beauty are the leaders. The greater part of the Beauty stock is of medium quality only, and consequently within reach of the discriminating public, who now have the advantage so seldom offered. The hot weather has made carnations show untoward effects. They have been coming in more rapidly than they could be disposed of, and their shortening up is expected to follow very soon. The local market has never been so eager for sweet peas and never have the receipts been so liberal as this spring. A number of growers have remarkable success in this line, and we may expect a well-filled market next season. Outdoor planting is booming with the good weather and contractors for this sort of work report this business 50 per cent better than last year. The demand for bedding stock is correspondingly large.

NOTES.

Mrs. John Galvin, wife of the late John Galvin and mother of Thomas F. Galvin died May 16 at the family homestead on Washington street, Dorchester. Death was the result of old age and brought to a close a most useful life of 94 years. While somewhat infirm for the past year Mrs. Galvin retained her faculties to a remarkable degree, the end being peaceful and resigned. The funeral was held May 18, the display of floral tributes being of great beauty.

Welch Bros. are brimful of confidence in the gradual resumption of business along the most solid lines, and are preparing for the Memorial day trade with unusual vigor. Orders to date are far in excess of the same period of last year.

Chas. Robinson of the H. M. Robinson Co. concern has just completed his jury term which has occupied the greater part of his time the last six weeks.

H. A. Wheeler of Waban is cutting some fine cattleyas.

B.

HARRISBURG, VA.—John Fallon of Staunton has purchased a lot on Collicello street and will begin building greenhouses there shortly.

ITHACA, N. Y.—With $30,000 appropriated by the state legislature for the purpose, new greenhouses are to be built for the Department of Horticulture. They will stand on the slope southeast of the agricultural college buildings, just below the Carnegie filtration plant and north of the new athletic field. This ground slopes to the west and will be terraced. Between the greenhouses and the athletic field will be a broad parkway. The old greenhouses of the department, at the south barn, will be abandoned. The work of beginning the new buildings has been delayed by a difficulty in fitting the department's needs to the appropriation.

The Seed Trade.

American Seed Trade Association.

Watson S. Woodruff, Orange, Conn., Pres.; J. C. Robinson, Waterloo, Neb., First Vice-Pres., C. E. Kendel, Cleveland, O., Sec'y and Treas. Twenty-seventh annual convention, Clifton House, Niagara Falls, Ont., June 22-24, 1909.

GLADIOLI, Caladium esculentum and fancy leaved caladiums have all sold well this season.

STRINGLESS GREENPOD bean is now in demand for country trade and pretty scarce; so is Burpee's bush lima.

COUNTER seed trade the first half of May is making up for the poor trade during the cold latter half of April.

TOLEDO, O.—The Ohio Seed Co. has made an assignment to Attorney Chas. K. Friedman, giving its assets as $1,000 in personal property.

THE unsatisfactory flowering of many good varieties of named tulips grown under glass in this country this spring is, it is said, especially true of sand grown bulbs.

IN a recent western suit by a broom corn planter who received cane seed instead of broom corn, the judge allowed only the cost of preparing the land. An Illinois case.

NEBRASKA SEED CROPS.—Growers report May 18 as follows: "Spring has been cool and backward, and, until recently, rather dry. At this writing we see nothing to prevent crops going into the ground in good shape."

GOVERNMENT SEEDS.—The new office building of the house of representatives in Washington is said to be overrun with mice attracted by the garden seeds piled up in the members' rooms. Each member receives about 10,000 packages of this rubbish.—Country Gentleman.

MICHIGAN PEAS AND BEANS.—A well known grower writes as follows May 18: "Peas are about all in the ground and some are up. It is too early to make any predictions as to crop prospects. We have a large portion of our bean acreage secured but it cost us something to do it. Seedsmen who contracted early made money by doing so."

COUNCIL BLUFFS, IA.—A highly interesting controversy, involving a question of veracity between the state food and dairy commissioner and the authorities of Iowa State College at Ames has developed here through the filing of an action by the county attorney against the Younkerman Seed Co., charging the company with selling or having for sale alsike clover seed containing the seed of Canada thistle. Alderman Younkerman, head of the seed company, claims the seed in question had been approved by Ames experts and is going to fight the case. —Fairfield Journal.

CHICAGO.—The end of the season finds but few onion sets on hand; winter tops are given away, yellow bottoms $1 to $1.50 per bushel, whites hold up, the few there are selling at about $3.25.—High winds damaged the growing crops of onion sets May 15 pretty badly on all light soils, especially south of the city, the loss being probably 1,000 pounds of seed.—S. F. Leonard of the Leonard Seed Co., sails from New York for Europe on the S. S. Minnetonka June 5.—Leonard H. Vaughan of Vaughan's Seed Store will start on a California trip about June 1. —Seed potatoes are hardly to be had though still in demand at record breaking prices.—Contract prices on the board of trade May 19 for grass seed were noted as follows: Prime timothy, $3.90 (nominal); white clover, $16.

James B. Kidd.
Expert Hort. Appraiser at the Port of New York.

James B. Kidd.

We present herewith portrait of Jas. B. Kidd, expert horticultural appraiser at the port of New York and well known to seedsmen, nurserymen and florists from Boston to the confines of Mexico. Mr. Kidd is the first expert in this line to be appointed in the customs department and it is gratifying to know that his work during the time he has been in office has given entire satisfaction to the authorities. The trade trusts him because he knows his business and the government has confidence in him because he is an honest man. Mr. Kidd was appointed in March, 1907.

Wyoming Seed Law.

The Wyoming state agricultural seed (includes farm and garden seed) law passed February 27, 1909, requires that all such seed shall be labeled either PURE, UNCLEANED or MIXED. Seed labeled PURE shall conform to certain percentages of purity and viability and if not, the seller is liable to $100 fine if he cannot show wrong handling or labeling by other parties. The law requires 80 per cent vitality on nearly all seeds. Evidently no seedsman will be safe in selling any seeds in Wyoming under the brand PURE seed. The unreasonable figure of 94 per cent germination is required on corn.

[How do the Wyoming authorities expect the seller to be able to follow the seed around the state to be able to testify how the buyer has stored and handled or mixed it?—ED.]

Wisconsin Peas and Beans.

Writing May 18 growers report that the price on contracts has advanced above any previous season and that it has been extremely difficult and expensive to place contracts even at these high prices. Everywhere the weather has been cool and backward and has caused the farmers much anxiety. Some seed has already rotted in the ground and some is not sown yet. A small percentage of the farmers have reported favorably regarding present condition of the pea crop.

Dutch Bulb Growers' Society of Haarlem

The following awards were given by the tulip and mixed bulbs committees at the recent meetings:

First class certificates to single early tulip, Mr. Burger, pure yellow, oblong-shaped flowers. Raised from single early tulip Verboom (H. Burger); double early tulip, Schoonoord, pure white flowers, raised from double early tulip, Murillo (N. Dames Lisse).

Awards of merit to Cyclamen Persicum, Baroness Burdet-Coutts, large pure white flowers and oblate petals (E. H. Krelage & Son, Haarlem); double early tulip, Boule de Neige (Purity), large pure white flowers resembling the variety Murillo, but of a somewhat rounder form (N. Dames Lisse); single early tulip, Joost von Vondel, rose, with large long flowers, white, feathered rosy, raised from the variety Joost von Vondel (P. Heems, kerk Johr., Rijusburg); single early tulip, Duchess of Connaught, clear rosy-red flowers (Y. Y. de Langen, Bevenijh). B.

French Growers' Action on Prices May 2.

Oignons à fleurs. — On nous communique : Les membres de l'Union des producteurs d'oignons à fleurs, dont le siège social est place de l'Eglise, 2, au Pont-du-Las, ont fixé dans leur réunion du 2 mai ainsi qu'il suit le prix de leurs oignons de jacinthes : le 11 à 12 centimètres, 50 francs le mille ; le 12 et au-dessus, 75 francs le mille. Marchandise prise et acceptée au jardin du producteur. Paiement au comptant sans escompte. Les autres bulbes ont été laissées aux prix courants. — *Le président*, BLANCHARD.

Market Gardeners

Greenhouse Vegetable Growers and Market Gardeners' Association.

E. A. Dunbar, Ashtabula, O., President; S. J. Perry, Grand Rapids, Mich., Vice-President; S. B. Chester, Cleveland, O., Treasurer; S. W. Severance, 508 Illinois Life Building, Louisville, Ky., Secretary.

Fertilizers.

We have repeatedly called attention in these columns to the fact that wherever fruit is the object, such fertilizing materials should be used as will induce fruit formation. Foremost among these are phosphates and all animal manures, for nearly all are deficient in phosphates. Hence the common belief that manure produces too much leaf and vine and little fruit. The fact is, manure can be employed in enormous quantities, if properly balanced by phosphates and potash. As a rule we may say nitrogen stands for quantity, phosphorus for earliness and potash for quality; or, in other words, nitrogen for foliage, phosphates for flower and fruit and potash for eating qualities of such fruit. While we must know that all three are required for successful plant growth, the fact that either one element in oversupply produces certain results needs careful consideration. By withholding nitrogen and adding phosphates excessively we can produce a precocious, yet apparently stunted plant.

The market grower does not care for fine-drawn lines. He should supply his plants generously with humus, either by the use of manure or green crops plowed under, which will furnish the nitrogen and then supply ample potash. For this sulphate of potash, high grade is preferred. For most leaf crops, such as lettuce, cabbage, celery, etc., manure and some additional potash do well; for cucumbers, melons, tomatoes, potatoes, sweet corn, etc., we must also add phosphates. We like to apply manure with a manure spreader, say 10 tons per acre, and to each load of manure we add 100 pounds of fertilizer analyzing about 4 per cent nitrogen, 8 per cent phosphate and 12 per cent potash. This as a base. Then after crops are started and we know just what we have to deal with we supplement the above with additional applications of nitrate of soda, sulphate of potash, bone meal or Peruvian guano, or the above in mixture. Pulverized sheep manure makes a good base.

MARKETMAN.

Outdoor Watering.

Judging by the numerous water systems put in on every hand gardeners do not wish to repeat last year's experience. While a good water supply is a necessity to good gardening, there are two sides even to this matter. The inexperienced think once they have the water all is well. In these notes we will try to point out some of the difficulties. No one should undertake to water an outdoor crop unless he can do so thoroughly, and keep it up if necessary. Insufficient and irregular watering does more harm than good. Far better try it on a smaller scale, and handle that well.

Some crops respond readily to watering. These are lettuce, celery and radish; without a constant supply of moisture these are unfit for the table. Successful watering depends greatly upon the nature of the soil. A sandy soil or sandy loam is most suitable; a soil full of humus holds moisture well and will respond to watering; any stiff clayey land is poorly adapted to watering and hardly worth the trouble. The best way to treat clayey soils is to mulch them with manure previous to watering.

A great factor is fertility. Watering is an exhaustive process. Where continuous watering is necessary, feeding is in order either with commercial fertilizers or topdressing of old manure. Many times well water contains lime. The constant application of such water would soon impoverish the soil without additional fertilizing. The final danger is overwatering, just previous to a rain. We may have a long dry spell and finally conclude to water and just then nature steps in by sending heavy rains. For this there is only one remedy—ample drainage. There are successful men who regret having invested so much money in watering outfits. They depend upon plenty of humus and fertilizers and constant cultivation. Where only one crop per season is grown the cultivation principle works very well; however, when we attempt double and triple cropping, an ample water supply is necessary. For this there is no better method than to thoroughly soak the land just after one crop is removed, thus replenishing the subsoil moisture.

MARKETMAN.

Mushrooms in Formosa.

Consul Carl F. Deichman, of Tamsui, reports that a company organized for the purpose of encouraging the growth of agricultural products in Formosa, has been successfully experimenting in the cultivation of a mushroom which is largely used by the Japanese and Chinese for its high quality. The consul writes as follows concerning the outcome of the experiment:

"This mushroom is extensively grown in Japan, but until the Formosa company started cultivating it, a little over a year ago, none was raised in Formosa, although the climate in the higher mountain regions is well adapted to its growth, and the tree known as shii, to which the mushroom attaches itself, is found in large numbers in these mountains. The shii is a species of oak (Quercus cuspidata). The tree is cut down and trimmed of its smaller branches and rice water thrown over it at intervals to prepare it for the mushroom. In Formosa it takes about one year to get the first crop of mushrooms, while in Japan

TO THE TRADE

Vaughan's Lilium Harrisii

Careful Selection of Both Plants and Bulbs.

WITH a good crop of **"Harrisii"** in sight, it would be well for growers to remember that Easter comes on March 27th in 1910, which makes it necessary to force a lily that you can depend on getting in on time. Remember, while we do not claim that our **"Harrisii"** are absolutely free from disease, or that every bulb will produce a perfect plant, we do claim that our grower's efforts in the way of spraying and rogueing are producing results, our stock now being freer from disease than ever before and of genuine **"Harrisii"** type — in fact, the best general crop grown on the Island of Bermuda.

Vaughan's Seed Store,

CHICAGO: 84-86 Randolph St. NEW YORK: 25 Barclay St.

it takes three. They improve in size and flavor up to the third year.

"This mushroom was grown in Shinchiku prefecture, about 40 miles south of Taihoku, but was not of very good quality, the climate apparently being too warm. They are now growing it in the mountains of Byoritsu, about 6,000 feet above sea level, where the climate is about the same as that of the districts where it is grown in Japan, and the yield is of superior quality. The first crop, just gathered, was of excellent quality, though the amount was small—about 650 pounds. The price received for it averaged 30 cents per pound. The price in Taihoku is 50 cents per pound. The company estimates that the spring crop will amount to 10,000 pounds. They expect to increase the production as well as improve the quality in order to fill the demand in Formosa, as well as export it to Japan and other countries, as it has been found to be a very profitable enterprise."

Prices of Indoor Vegetables.

The prices of indoor vegetables at leading points May 15 were as follows: New York, cucumbers, 50 cents to $1 per dozen; mushrooms, 50 cents to 65 cents per pound; mint, 35 cents per dozen bunches; radishes, $2 per 100 bunches; rhubarb, $1.50 to $1.75 per 100 bunches; tomatoes, 15 to 25 cents per pound; grapes, $1 pound. Chicago—Cucumbers, $1 to $2 per dozen; head lettuce, $3 to $6 per barrel; mushrooms, 40 to 85 cents per pound; tomatoes, 10 to 20 cents per pound; radishes, 40 to 60 cents per dozen bunches; grapes, Gros Colmar, $1 to $3 per pound; peppers, 30 to 75 cents per dozen; rhubarb, 6 to 10 cents per pound. Kansas City—cucumbers, 65 cents to $1 per dozen. Cincinnati—Cucumbers, 75 cents per dozen; Boston—Cucumbers, $4 to $5 per box.

Wisbech (Eng.) Bulb Flower Trade.

Not enough money is being returned to pay for the planting and lifting of the bulbs. Here we are cutting over 1,000 boxes, of 30 to 36 bunches of 12 blooms weekly. The narcissus is strongly represented by N. maximus, N. poeticus is yet to come in, several acres being grown. May flowering tulips are now a busy line, Golden Crown being a specialty. The recurved bright-yellow Retroflexa is also well in. The tulip fields in the early morning are a beautiful scene. S.

DENVER, COLO.—The greenhouses of James Benton at 901 Jason street, were almost entirely destroyed by fire May 5.

The Nursery Trade

American Association of Nurserymen.
C. J. Brown, Rochester, N.Y. President; C. M. Hobbs, Bridgeport, Ind., Vice-President; George C. Seager, Rochester, N. Y., Sec'y.
Thirty-fourth annual convention to be held at Rochester, N. Y., June 9-11, 1909

PYRUS JAPONICA is one of the finest flowering shrubs of the week.

THE lime-sulphur solution is proving very effective against San Jose scale in Arkansas.

SEASONABLE weather has come on rapidly and at this date the shipments of nursery trade are about over for the season.

RIBES AUREA in addition to its pretty yellow flowers, has a delicate fragrance which can be felt for quite a distance. It is now at its best in the Chicago parks.

CLARKSVILLE, MO.—The Stark Bros. Nursery & Orchard Co. has increased its holdings by purchasing the McCune farm, containing 184 acres. The price paid was $18,000.

PASADENA, CALIF.—M. C. Armour of Chicago has purchased 65 acres of land in this vicinity which he proposes beautifying and making into one of the finest estates in the west.

FULLY 5,000,000 orange trees are being planted in Louisiana and east Texas this spring as a result of the inroads of the boll weevil, acording to reports of seed and tree dealers in New Orleans.

THE Pennsylvania railroad is planning to set out more than 1,000,000 trees this spring at various points in New Jersey and Philadelphia. The locust plantations are being made over and a great deal of ornamental shrubbery is being planted around stations and other places along the line.

INDIANAPOLIS, IND.—F. R. Harritt has completed large plantings of shrubs and ornamental trees on his farm; he intends pushing the wholesale end of the nursery business. Mr. Harritt is expecting to cut a fine crop of peonies this spring; he also plans the erection of a bungalow for this summer.—J.

THE Judas tree or red bud is in flower around the Chicago parks, planted in some cases, as at Jackson park, with a background of green provided by other shrubs. This is the way it should be planted as, owing to its flowering on the leafless wood, it does not make a good display alone. Such a bright and showy subject should be planted more freely, as it flowers before the majority of species are in and is perfectly hardy.

THE fourteenth biennial meeting of the American Pomological Society will be held at St. Catherines, Ont., September 14-16 on a joint invitation of the Ontario Fruit Growers, the Niagara District Fruit Growers and the St. Catherines Horticultural Society. The Ontario government has recognized the importance of the coming of this society to Canada by placing a substantial sum of money at the disposal of the committee on arrangements.

The Weeping Mulberry.

The weeping mulberry, illustrated on this page, is fairly popular and frequently seen on lawns and in parks. It is one of the hardiest and one of the best of weeping trees and may be recommended with confidence for either sheltered or exposed positions. Even in winter, when the foliage has fallen, its distinct habit and the cheerful light brown tint of the bark make it welcome in the landscape especially near buildings or water. It thrives on any kind of soil and makes a very fine growth in alluvial or sandy bottoms.

May Flowering Trees and Shrubs.

NOTES FROM ROCHESTER, N. Y.

The season is at present from 10 to 12 days later than the average. The weather has been remarkably chilly with an unusual precipitation of rain. Only during the past two or three days has there been any genial warmth in the air. The handsome Himalayan shrub, Corylopsis spicata, came into bloom May 1 and is in good condition at the present time. The spikes of yellow flowers are attractive. Corylopsis pauciflora from Japan flowers at the same time, and the yellow flowers are quite showy. Contrary to the meaning of the specific name there is no paucity of blossoms on a well grown individual.

The Weeping Mulberry.

Forsythia Fortunei, the first of the golden bells to bloom, came into flower May 1. F. intermedia followed in about two days, and F. viridissima in about two or three days more. F. Europea, a new species recently introduced to cultivation, flowers at the same time as the latter, is considerably hardier and the yellow blossoms are a little more showy. Magnolia stellata, which we referred to in our last notes as showing signs of arrested development on account of the cold weather, finally came into good flower on May 1. The blossoms were somewhat stained, but they made a good display. M. Kobus, from Japan, was in full flower May 6. The flowers are pure white and are very showy. It is, however, a remarkably shy bloomer and individuals will attain considerable size and age before producing a single bloom. It has very handsome, ample foliage and is quite hardy. M. conspicua came into flower May 7 and was in full bloom on May 10. The pure white flowers are exceedingly beautiful, and it is one of the choicest of the magnolias. M. Soulangeana followed two or three days later. The somewhat cup-shaped flowers splashed with purplish red on the outside are quite showy. M. Norbertiana flowers simultaneously and much resembles M. Soulangeana. Other forms that flower about the same time as the two last, are M. amabilis with whitish flowers stained with deep points; M. alba superba with whitish flowers, and M. Alexandrina with very showy rosy end blossoms. M. speciosa, which is grown considerably around Rochester, is now coming into flower, May 14. The flowers are slightly stained with purplish red on the outside. Some forms that bloom at the same time as M. speciosa are M. Verbania with flowers that shade from purplish red to pink on the outside; M. rustica flore rubra with very showy rosy red flowers on the outside, and M. Brozzoni with long handsome whitish blossoms. These magnolias are indeed the gems of American gardens.

Lonicera Standishii and M. fragrantissima are still displaying their whitish fragrant blossoms. L. cœrulea was in full bloom May 9, and M. gracilipes with its longish tubed deeply rose tinted flowers was in full bloom on May 13. The Norway maple came into flower on May 8 and was about in full flower on May 11. The yellowish flower clusters are quite attractive. In a normal season the Norway maple is usually in full flower about April 30. The sugar apple was displaying its light yellow flower clusters on May 11.

The iron tree (Parrotia Persica) with its inconspicuous blossoms showing dark crimson stamens, was in flower on May 5. The rare Euptelea polyandra (the staminate form) with the flower clusters of reddish anthers, but not at all conspicuous, was in flower on May 6; and the remarkably handsome tree, Cercidiphyllum Japonicum (the staminate form, we have not got the pistillate) with the clusters of reddish stamened flowers, was in bloom on May 6. Spiræa Thunbergi was in full bloom on May 10, and S. arguta followed about two days later. S. arguta flowers more profusely with us than S. Thunbergi.

The large-toothed-leaf poplar (Populus grandidentatum) and the American aspen poplar (P. tremuloides) were in bloom on May 6. The Carolina poplar was in full flower on May 3. The long drooping male catkins are quite attractive. The Chinese cherry (Prunus tomentosa) was in full bloom May 7. The pinkish flowers are very showy. This forms a dense small tree, or tall spreading bush, and is highly ornamental. The Japanese cherry (Prunus psuedo-cerasus) came into bloom on May 10. The deep rose pink flowers are about one and a half inches to two inches in diameter. This is the wild form introduced from Japan by Dr. C. S. Sargent; but we understood from Dr. Sargent lately that this is after all perhaps another species and not the true P. psuedo-cerasus.

Prunus subhirtella* came into bloom on May 7, and is still in good flower, May 14. The upright branches are densely covered with the soft pink flowers and it is conspicuously ornamental. The Japanese weeping cherry (Prunus pendula) has been in full bloom since four or five days, and the drooping branches wreathed with the whitish pink flowers are very attractive.

The wild apricot (Prunus Armeniaca) was in full flower May 10. The branches are thickly covered with the pinkish white flowers and it is very pretty. A Japanese apricot received here from the Arnold Arboretum (P. Mikado) with numerous showy pink blossoms was in full bloom on May 6. the Siberian apricot (P. Sibirica) was in full bloom on May 7. The deeply pink flowers, about one and a half inches across, are conspicuous.

The cherry plum (Prunus cerasifera) and its well known purple-leaved form (P. Pissardi of nurseries) were partly in flower May 7 and are now passing out of flower. The Allegheny plum (P. Allegheniensis) came into flower on May 9 and the flowers are now fading. The Japanese plum (P. triflora) with the branches thickly covered with the small cup-shaped blossoms was in full flower on May 12 and is now in good bloom. Prunus monticola, with showy white flowers and rather prominent yellow anthers is now in full flower. The Canada plum (P. nigra) is now at its best and makes a good floral display. The Chickasaw plum (P. augustifolia) is now in fine flower.

The handsome double flowering Chinese plum (P. triloba) is now coming in flower. The clear rosy pink blossoms are very showy. The flat or Peento Peach (Prunus Persica var. platycarpa) is now in full flower and the pink flowers are quite showy. This was received two or three years since from Dr. Sargent, who lately procured it from Pekin, China. The arborescent amelanchiers are now in full flower, and the Japan quinces in numerous variety are just coming into bloom. The Chinese lilac (Syringa oblata), the earliest of all lilacs to bloom, is now commencing to open its pale and fragrant blossoms. JOHN DUNBAR.

*Prunus subhirtella is given as synonymous with P. pendula in Bailey's Cyclopedia; or it is spoken of as P. subhirtella Miq. in part. The plant we have here under that name came from Dr. Sargent, and it does not appear to have anything in common with P. pendula. I suspect that investigations at the arboretum may have determined a true P. subhirtella of Miquel.—J. D.

Plant Notes.

The bottle-brush, Callistemon speciosus, also known as metrosideros, is one of the most easily grown of the hard-wooded plants, far more so than the ericas and some others of the myrtaceous subjects. It is also extremely showy and sells well when offered in neat, well-flowered specimens in 5-inch pots. Plant growers who wish to try it should obtain some old stock plants of it and strike cuttings, as seedlings do not flower as early or as freely as plants from cuttings. In the south the plants could probably be grown outside in protectors the year around, but in the northern and middle states they should have greenhouse protection in winter and spring.

The newer and choicer hybrids of phyllocactus are among the finest and most select of greenhouse plants, very different from the old varieties. Dozens of named kinds are grown and the colors are remarkably varied and good. There is no difficulty in their culture; they like a moderately rich soil only and careful watering at all times, but not the old style drying off as practiced with cacti generally.

A plant that throws spikes of flower eight feet or so high has a noble appearance in the herbaceous border and Eremurus robustus does this. E. Himalaicus is not quite so strong, but equally beautiful. Strong roots obtained and planted now will flower this season and keep up a display for quite a long time. These are two of the finest herbaceous plants in existence and should be much more grown.

Gloriosa Rothschildiana was well shown at the recent spring show at Philadelphia, the plant being grown by Arthur Griffin of Newport, R. I. It was growing in a 14-inch pan containing eight bulbs giving 32 flowers in all. The gloriosas are very showy and beautiful plants of the lily tribe and worthy of more extended culture.

MARLBORO, MASS.—H. H. Rogers is building a new greenhouse.

French Market Porters.

Paris, May 15.—A quaint and interesting competition for market porterships took place at the Paris central markets to fill 30 vacancies which will occur during the ensuing year. The Corporation of Market Porters—or "Strong Men of the Markets," as they are called locally—is one of the most ancient in Paris, having been established in the reign of Saint Louis. The number is strictly limited to 621, and they have the exclusive privilege of carrying goods for the salesmen, which occupation requires great strength.

There were 550 competitors, of whom 300 successfully passed the strength test, which consisted in carrying on the shoulders a pannier containing weight equal to 504 pounds for a distance of 45 yards. The winner covered the distance in 30 seconds. The most formidable part of the competition is a written and oral examination in dictation and arithmetic, for it is necessary that the porters should be able to calculate correctly and quickly.

Trees.

Trees grow on mountain-sides, in remote country districts and in some residential quarters. They furnish shade, presidential timber, and, when sliced thin, delicious breakfast foods.

Trees are useful for cutting down and furnish occupation for the otherwise unemployed. In the form of railroad ties they furnish a basis for bond issues and for stock market panics.

Trees may be oak, beech, chestnut or elm, but they are always popular. They make excellent fire, especially when made into some novels.

Trees are brown and green, but when made into paper are generally yellow. This is when they bark loudest.

Trees were at one time used for hanging purposes. Now we use investigating committees, thus showing the advance of civilization.

Among the rock-a-bye babies the treetop is a favorite. Later on the Christmas tree is in vogue. At the club the only tree used is the hat tree.

Americans consider themselves superior to all trees. That is why they cut them so.—Lippincott's.

BROOKLYN, N. Y.—One of the horse's traces broke as John Wendell, 611 Central avenue, was driving across the Williamsburg bridge May 10, and the horse bolted. Several policemen tried to stop the animal, but failed. The runaway dashed against the gate and was thrown, and the shafts of the wagon were broken. Wendell was thrown from the seat and received a bad laceration of the right ear, which was dressed, after which he went home with the injured horse and rig.

ROSE PLANTS

On own roots. Send for list.
C. M. NIUFFER, Springfield, Ohio.

Rochester, N. Y.

A flower show will be held in this city in November that will be unique in so many ways that it is expected to attract the attention of members of the trade in all parts of the country. It will be original, in that there will not be a vase or table in the exhibit. Convention hall, where the show is to be given, will be laid out as a garden, and the exhibits will grow on the floor. Instead of walking up and down between flower laden tables, spectators will pass along beautiful walks, under arbors, through palm forests, and to a cascade that will have its origin back on the stage at one end of the hall and will flow to the feet of those who enter the hall.

The show will be held November 2-4 under the direction of the Commercial Florists' Association of Rochester. Every florist will have an exhibit, and there will be choice exhibits from the gardens of prominent amateurs. It will be distinctively a chrysanthemum show, but there will be exhibited new varieties of roses, carnations and other popular flowers, palms and other plants.

Florists and nurserymen who are interested in the show, which has been under consideration since last winter, met at James Vicks Sons' offices for the purpose of going over the floor plans for the hall and perfecting other details. Every one present was enthusiastic. The general committee in charge of the show was divided into subcommittees. Charles H. Vick is chairman of the general committee, and H. B. Stringer is secretary. The subcommittees are: Floor and decoration—F. J. Keller, E. P. Wilson, R. G. Salter, G. B. Hart. Finance—W. L. Keller, William C. Barry, Sidney R. Clarke, W. H. Dildine, A. H. Salter. Exhibitions and awards—J. M. Keller, Ambrose Secker, F. W. Vick, F. R. Schlegel, C. B. Ogsten. Music—F. W. Vick. Advertising—Sidney R. Clarke, Thomas F. Brown, A. H. Salter, William Pitkin, Charles J. Brown.

PITTSBURG, PA.—The United States Floral Corporation was given its charter May 6.

Orange, N. J.

W. A. Manda addressed the New Jersey Floricultural Society on May 14, its regular monthly meeting, set apart as a special rose night. The floral contributions were from neighboring states and up to the usual standard. In the discussion, which was quite a feature of the evening, John Hayes, William Reid, Jos. A. Manda, Max Schneider, D. Kindsgrab, Chas. Ashmead, James McManus, Walter Gray and Rev. Lewis H. Lightipe, the botanist of the society, took part. In the unavoidable absence of President MacRorie and Vice President Edwin Thomas, the secretary was called upon to preside.
